

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

<b>Name of Facility:</b>	<b>On-Site Portion of Beta Ditch Including the Small Diversion Ditches</b>
<b>Goal of Closure:</b>	<ul style="list-style-type: none"><li>• Closure for future commercial/industrial uses.</li></ul>
<b>Site Investigation Area:</b>	<ul style="list-style-type: none"><li>• Size: The total size of the Beta Ditch is approximately 3,950 linear feet encompassing 1.76 acres.<ul style="list-style-type: none"><li>– Stauffer Extension: Approximately 800 feet by 25 feet wide (0.46 acre).</li><li>– Western Diversion Ditch: Approximately 200 feet by 35 feet (0.16 acre).</li><li>– Main Portion of Beta Ditch: Approximately 2,000 feet by 25 feet (western and central portions) to 7 feet (eastern portion; 0.92 acre).</li><li>– Eastern Diversion Ditches: Approximately 950 feet by 10 feet (0.22 acre).</li></ul></li><li>• Location:<ul style="list-style-type: none"><li>– Stauffer Extension: Straight ditch north of the AP Maintenance Shop from the curve of Beta Ditch extending to the western boundary of the Site.</li><li>– Western Diversion Ditch: Curved portion of the Beta Ditch extending from the Storm Sewer System out flow, on the north side of the ammonium perchlorate (AP) Laboratory, to the confluence with the Stauffer Extension.</li><li>– Main Portion of Beta Ditch: Central portion of the facility, extending from the confluence of the Western Diversion Ditch and the Stauffer Extension and then curving to the eastern boundary of the property.</li><li>– Eastern Diversion Ditches: Two branched diversion ditches are described as follows: the first branch extends from the main portion of Beta Ditch southeast to 9<sup>th</sup> Street which it parallels to Avenue D. The second branch is northwest and west of Pond C-1 (LOU 20) extending from the south side of the first branch. A portion of the westernmost Eastern Diversion Ditch lies within Area III, but for the purpose of this LOU packages, the entire Beta Ditch system will be discussed herein.</li></ul></li><li>• Current Status/Features: The Beta Ditch historically carried process wastes, but now carries only storm water. The majority of the Beta Ditch is bermed and supports native vegetation.</li></ul>

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

**Description:**Stauffer Extension

- The Western Diversion Ditch is an approximate 800-foot long east to west ditch north of the AP Maintenance Shop on the western part of the Site extending from the southern curving section of the Beta Ditch [Ref. 1].
- This ditch receives stormwater run-off from the west-central off-site area and combines with the onsite portion of the Beta Ditch [Ref. 2].

Main Portion of Beta Ditch and Western Diversion Ditch

- The Beta Ditch is an unlined east-west trending ditch that historically received various wastes from process operations at the following facilities: U.S. Government (1941 through 1944), Tronox and tenants (early 1940's through early 1976), Stauffer (1970 to April 1, 1976), and Montrose (1970 to April 1, 1976) [Ref. 1].
- The Beta Ditch was constructed circa 1941 or 1942 [Ref. 1].
- The original western boundary was just northwest of the current Tronox AP Maintenance Shop (LOU 39) and the eastern boundary extended on to the Timet property.
- In 1970, the Beta Ditch was extended westward to allow Stauffer and Montrose wastes to be transmitted through the Beta Ditch [Ref. 1].
- The LOU 5 surface gradient trends across the Site to the east towards topographically lower areas [Ref. 1].
- Prior to 1976, primary use of the Beta Ditch was for a variety of liquid and slurried wastes from various operating companies and leases between 1941 to 1942 and 1976 [Ref. 1].
- Between 1976 and 1993, the ditch conveyed non-contact cooling water and periodically, stormwater run-off [Ref. 1].
- Prior to January 1976, the average combined volume of effluent from process waste discharged to the Beta Ditch was approximately 600,000 gallons per day [Ref. 1].
- By January 1976, the facility achieved a “zero discharge” industrial wastewater effluent program [Ref. 1].
- From January 1976 to present (January 2008), the on-site portion of the Beta Ditch has been used by Tronox to transmit the following [Ref.1]:
  - stormwater run-off from the southern portions of the Site and from the Stauffer facility;
  - once through, non-contact cooling water;
  - periodic upsets of feed water associated with the former Main Cooling Tower (LOU 46); and
  - effluent from Flintkote (until 1979).

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

- A water balance calculation, using data from 1981, suggested that seepage from the Beta Ditch was approximately 100,000 gallons each day of use or roughly 3.5 percent of the solution transmitted [Ref. 1].
- In 1993, light colored sediment and salt-like deposits were observed throughout the majority of the Beta Ditch. No evidence of overtopping or other flooding was observed [Ref. 1].

Eastern Diversion Ditches:

- The diversion ditch west and northwest of Pond C-1 (LOU 20) joins the Beta Ditch in the eastern portion of the Site and is considered part of the Beta Ditch [Ref. 1].
- The diversion ditch receives stormwater run-off from the Historic Manganese Tailings Area (LOU 24) and historically from the former Main Cooling Tower (LOU 46) upsets [Ref. 1].
- The ditch was lined with broken concrete and metal parts of cells to reduce bank erosion [Ref. 1].

<b>Process Waste Streams Associated with LOU 5 (Beta Ditch)</b>	<b>Known or Potential Constituents Associated with LOU 5</b>

<b>Process Waste Streams Associated with LOU 60 (Acid Drain System)</b>	<b>Known or Potential Constituents Associated with LOU 60</b>
Effluent from the Acid Drain System.	<ul style="list-style-type: none"> <li>• Metals</li> <li>• Hexavalent chromium</li> <li>• Cyanide (associated with LOU 62)</li> <li>• Perchlorate</li> <li>• Wet chemistry analytes</li> <li>• Organochlorine pesticides (associated with LOU 4)</li> </ul>

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

<b>Process Waste Streams Associated with LOU 24 (Leach Beds, Associated Conveyance, and Mn Tailings Area)</b>	<b>Known or Potential Constituents Associated with LOU 24</b>
Leachate from Mn Tailings Pile.	<ul style="list-style-type: none"> <li>• Manganese, trace heavy metal sulfides</li> <li>• Wet chemistry analytes</li> </ul>
Waste water from dewatering of Mn tailings placed in the leach beds.	<ul style="list-style-type: none"> <li>• Manganese, trace heavy metal sulfides</li> <li>• Wet chemistry analytes</li> </ul>
<b>Process Waste Stream Associated with LOU 46 (Former Main Cooling Tower)</b>	<b>Known or Potential Constituents Associated with LOU 46</b>
Recirculation cooling water from the Main Cooling Tower [Ref. 1].	<ul style="list-style-type: none"> <li>• Metals (manganese)</li> <li>• Hexavalent chromium</li> <li>• Wet chemistry analytes</li> <li>• Sulfates</li> <li>• Carbonates</li> <li>• Phosphates</li> <li>• Chloride</li> <li>• Sulfide</li> <li>• Perchlorate</li> <li>• Chlorate</li> <li>• Ammonia</li> </ul>
Several process wastes from historical U.S. Government, Tronox, and Timet processes.	<ul style="list-style-type: none"> <li>• Metal wastes (manganese, boron)</li> <li>• Hexavalent chromium</li> <li>• Wet chemistry analytes</li> </ul>
Recirculation cooling water, pass-through and treatment water.	<ul style="list-style-type: none"> <li>• Sulfates</li> <li>• Carbonates</li> <li>• Phosphates</li> <li>• Chloride</li> <li>• Sulfide</li> <li>• Perchlorate</li> <li>• Chlorate</li> <li>• Ammonia</li> </ul>

**Overlapping or Adjacent LOUs:**

The following LOUs overlap or are adjacent to each other as shown on Figure 1:

**Overlapping LOUs**

- LOU 57 (AP Plant Transfer Lines to Sodium Chlorate Process and Ponds) – The central main portion of the Beta Ditch is overlapped by LOU 57.

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

- LOU 60 (Acid Drain System) – The flume of the Acid Drain system crosses diagonally the central main portion of the Beta Ditch.

### Adjacent LOUs

- LOU 19 (Pond AP-5) – This LOU is located north of the central main portion of the Beta Ditch.
- LOUs 16, 17, and 18 (Ponds AP-1 through AP-4) – These LOUs are located south of the central main portion of the Beta Ditch. LOU 18 is also located west of the Eastern Diversion Ditches.
- LOU 20 (Pond C-1) – LOU 20 is located south of the east side of the Main portion of the Beta Ditch and east of the Eastern Diversion Ditches.
- LOU 24 (Leach Beds, Associated Conveyance Facilities, and Mn Tailings Area) – LOU 24 is located southeast (upgradient) of the Eastern Diversion Ditches.
- LOU 21 (Pond Mn-1) – LOU 21 is located southeast (cross-gradient) of the Eastern Diversion Ditches.
- LOU 52 (AP Plant Area Screening Building, Dryer Building and Associated Sump) – LOU 52 is located south of the western portion of the Main Portion of the Beta Ditch and east of the Western Diversion Ditch.
- LOU 54 (AP Plant Area Change House/Laboratory Septic Tank) – LOU 54 is located south of the central portion of the Stauffer Extension.
- LOU 2 (Open Area South of Former Trade Effluent Settling Ponds) – LOU 2 is located north of the central portion of the Stauffer Extension.
- LOUs 39 and 38 (Satellite Accumulation Point, AP Maintenance Shop and Satellite Accumulation Point, AP-Laboratory) – LOUs 39 and 38 are located south of the Western Diversion Ditch.

### LOUs Potentially Affecting Soils in LOU 5:

The following overlapping or adjacent LOUs to LOU 5 have the potential to be affected:

- LOU 16, 17, 18, 19, and 20 – Though no evidence or documentation indicates overtopping or other flooding of the AP Ponds or Pond C-1 [Ref. 1], there is a small potential for these LOUs to affect the Beta Ditch. Additionally, these LOUs and the Beta Ditch were bermed; and therefore are unlikely to affect each other. For these reasons, the addition of other chemical classes to the Phase B Analytical Plan for LOU 5 is not required.

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

- LOU 24 – Storm water run-off from the Mn tails pile and process area flowed to a small north-south trending diversion ditch and into the westernmost Eastern Diversion Ditch (LOU 5) [Ref. 1]. This LOU has the potential for affecting subsurface soil in the Beta Ditch.
- LOU 46 – Historically the former Main Cooling Tower experienced several recirculation water upsets resulting in discharge of high conductivity water into the westernmost Eastern Diversion Ditch (LOU 5) [Ref. 1]. This LOU has the potential for affecting subsurface soil in the Beta Ditch.
- LOU 57 – LOU 5 lies within the footprint of the AP Plant's surface impoundment and transfer lines. The HDPE lines replaced process waste discharge into the Beta Ditch. Minor leaks on pipes were repaired as needed. This LOU has minimal potential for affecting subsurface soil in the Beta Ditch; therefore, the addition of other chemical classes to the Phase B Analytical Plan for LOU 5 is not required.
- LOU 62 – The State Industries Site is located in the southernmost portion of the Site and consists of two surface impoundments (SIs) that received spent pickling process wastes (for solar evaporation) generated during the manufacture of water heaters. On June 21, 1971 un-neutralized cyanide waste was discharged to the Beta Ditch. This LOU has the potential for affecting subsurface soil in the Beta Ditch.
- LOU 60 (Acid Drain System) – An aboveground branch of the Acid Drain System runs diagonally through the center of LOU 5 from northeast to southwest. From the Acid Effluent Neutralization Plant, effluent was transported along a surface conveyance (e.g., a flume) for disposal in the Trade Effluent Settling Ponds. There have been no reported releases from the system [Ref. 1]. Therefore, the addition of other chemical classes to the Phase B Analytical Plan for LOU 5 is not required.

In addition to the above stated LOUs potentially affecting LOU 5, offsite process waste streams have flowed through the Stauffer Extension and Main Portion of the Beta Ditch and may affect LOU 5. The sources of offsite process waste streams are unknown.

Known or potential chemical classes associated with offsite sources, and LOUs 24, 46, and 62 are consistent with those listed for LOU 5; therefore, no additional chemical classes have been added to the Phase B Analytical Plan for LOU 1. For detailed information on these LOUs, please refer to the specific LOU data package.

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

**Known or Potential Chemical Classes:**

- Metals
- Hexavalent chromium
- Cyanide
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- TPH-DRO/ORO
- Radionuclides
- Dioxins and furans
- Asbestos

**Known or Potential Release Mechanisms:**

- Potential infiltration to subsurface soils and groundwater.
- Potential overtopping or other flooding affecting surrounding soils.

**Results of Historical Sampling:**

Soil

- VOCs, SVOCs, pesticides, and PCBs were detected in the Beta Ditch (samples BDB-02 to BDB-05) during a Phase II investigation conducted in 1996 [Ref. 3].

Groundwater

- Area-wide groundwater sampling of wells I-AR, M-2A, M14A, M-17A, M-19, M-22A, M-34, M-35, M-38, M-39, M-67, M-68, M-75, M-76, and M-89 conducted between 1997 and 2004 identified total chromium and perchlorate in surrounding groundwater. Additionally, wells M-19, M-34, M-35, and M-39 identified manganese in surrounding groundwater. All wells have also been analyzed for pH, electric conductivity, and total dissolved solids.

Analytical results are summarized in **LOU 5 Tables 6 and 23** (see attached) [Ref. 4].

**Did Historical Samples Address Potential Release?**

- No, historical borings were limited in depth and constituents tested; additionally, the borings were not representative of the full extent of the LOU.

**Summary of Phase A SAI:**

Soil:

- Phase A borings SA14, SA16, and SA17 are located within the LOU and were specifically sampled to evaluate this LOU [Ref. 5]

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

Groundwater:

- Phase A wells M-89 and M-39 to the north (downgradient) were specifically sampled to evaluate this LOU [Ref. 5].
- Groundwater sample (GWSA14) was collected from Phase A boring SA14 and was specifically sampled to evaluate this LOU.

Chemical classes detected in Phase A soil borings SA14, SA 16, and SA 17:

- Metals
- Hexavalent chromium (SA16 and SA17 only)
- Perchlorate
- Wet Chemistry Analytes
- VOCs
- SVOCs (SA14 and SA17 only)
- TPH-GRO (SA14 only)
- Dioxins/furans
- Organochlorine Pesticides
- Radionuclides
- Asbestos

As a result of the Phase A data, the Phase B analytical plan for samples collected from LOU 5 will be expanded to include analyses for TPH-GRO and asbestos.

- Analytical results for soil and groundwater from the Phase A sampling event are summarized in LOU 5 Tables 1 through 5 and 7 through 22 (see attached) [Ref. 5].

**Are Phase A Sample Locations in “Worst Case” Areas?**

- Yes; however, additional soil borings will be drilled in the Beta Ditch for better LOU coverage.

**Is Phase B Investigation Recommended?**

- Yes

**Proposed Phase B Soil Investigation/Rationale:**

The Phase B investigation for LOU 5 consists of collecting judgmental soil samples from 23 locations:

- Nine (9) soil borings will be drilled within the Beta Ditch and associated diversion ditches.
- Six (6) soil borings will be drilled south (upgradient) of LOU 5.
- Five (5) soil borings will be drilled north (downgradient) of LOU 5.
- Two (2) soil borings will be drilled east and west (cross-gradient) of LOU 5.
- One (1) soil boring will be drilled north and south (up- and down-gradient) of LOU 5.

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

- All 23 borings along with the analytical program to evaluate soil samples from LOU 5 are listed on **Table A – Soil Sampling and Analytical Plan for LOU 5.**
- Soil sample locations consist of both judgmental and randomly-placed locations.
- Judgmental sample locations:
  - Designed to evaluate soil for known or potential chemical classes associated with LOU 5, based on the known process waste streams.
  - Eighteen (18) of the 23 sample locations are judgmental locations and consist of soil borings SA67, SA69, SA66, SA70, SA128, SA129, SA104, SA175, SA49, SA154, SA107, SA155, SA158, SA86, SA71, SA92, SA165, and SA131.
- Random sample locations:
  - Designed to assess whether unknown constituents associated with LOU 5 are present.
  - Five (5) of the 23 sample locations are randomly-placed locations and include soil borings RSAL8, RSAM4, RSAM5, RSAM7, and RSAN7.

**Proposed Phase B Constituents List for Soils:**

Both judgmental and random sample locations will be analyzed for the following full list of Phase A Site-related chemicals for LOU-specific and area-wide coverage purposes:

- Metals (Phase A list)
- Hexavalent Chromium
- Perchlorate
- Wet Chemistry analytes
- Cyanide
- Ammonia
- VOCs
- SVOCs
- TPH-GRO/DRO/ORO
- Organochlorine pesticides
- PCBs
- Radionuclides
- Dioxins/furans
- Asbestos

**Proposed Phase B Groundwater Investigation/Rationale:**

The Phase B groundwater investigation of LOU 5 consists of collecting groundwater samples from 14 locations to evaluate local groundwater conditions as part of Site-wide evaluation of constituent trends in groundwater

- Wells M-14A, M-68, TR-4, M-125, M-110, M-89, M-22A, and M-39 north (downgradient) of LOU 5 will be used to evaluate local and area-wide groundwater conditions.

## Summary of Available Data for LOU 5 Beta Ditch

Tronox Facility – Henderson, Nevada

- Wells CLD2-R, M-111A, M-19, M-142, and M-17A south (upgradient) of LOU 5 will be used to evaluate local and area-wide groundwater conditions.
- Well M-34 east (cross-gradient) of LOU will be used to evaluate local and area-wide groundwater conditions.
- The sampling wells and the analytical program to evaluate groundwater samples associated with LOU 5 are listed on **Table B – Groundwater Sampling and Analytical Plan for LOU 5**.

**Proposed Phase B Constituents List for Groundwater:**

Groundwater samples will be analyzed for the following analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Radionuclides

**Proposed phase B Soil Gas Investigation/Rationale:**

Five (5) soil gas samples will be collected to evaluate area conditions for the presence of vapor-phase VOCs in the vadose zone.

- Soil gas points SG58, SG86, SG31, SG26, and SG22 are located within 100 feet of the Beta Ditch and diversion ditches to investigate LOU 5 as a potential VOC source.

Details of the soil gas sampling program are contained in the NDEP-approved (March 26, 2008) Soil Gas Survey Work Plan, Tronox LLC, Henderson, Nevada, dated March 20, 2008.

**Proposed Phase B Constituents List for Soil Gas:**

- VOCs (EPA TO-15)

**Notes:**

n/a Not applicable - boring is not associated with a specific LOU but is located to evaluate soil for general area-wide coverage.

X Sample will be collected and analyzed.

No sample collected under Phase B sampling program.

DD\* Sample depth to be determined in the field where DD = sample depth (ft).

TPH-DRO/ORO Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.

1. The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.

2. Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.

3. Consists of wet chemistry parameters (including pH) listed on Table 1 of the Phase B Source Area Work Plan.

4. Organochlorine Pesticides (includes analysis for hexachlorobenzene).

5. Semi-volatile Organic Compounds

6. Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).

7. Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.

8. Polychlorinated biphenyls

9. Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.

10. Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854, Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

11. SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.0±0.05), and 2) with extraction method #3 (reagent water); per NDEP.

<b>Notes:</b>														
*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR 2007). ENSR is in the process of obtaining information from BMI.													
X	Sample will be collected and analyzed.													
1	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.													
2	VOCs = Volatile organic compounds (to include analysis for naphthalene).													
3	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).													
4	SVOCs = Semi volatile organic compounds.													
5	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).													
IIIN/E/W/S	Well located outside (north, east, west, or south) of Area II.													
nr	Not recorded in the All Wells Database (June 2008).													
TBD	To be determined when well is constructed													
(a)	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.													
Qal	Quaternary Alluvium													
MCfg1	Muddy Creek Formation - first fine-grained facies													
MCcg1	Muddy Creek Formation - first coarse-grained facies													

**Summary of Available Data for LOU 5 Beta Ditch**  
Tronox Facility – Henderson, Nevada

**Soil and Groundwater Characterization Data**

## **Summary of Available Data for LOU 5 Beta Ditch**

Tronox Facility – Henderson, Nevada

LOU-specific analytes identified include:

- Metals (Phase A list)
- Hexavalent Chromium
- Perchlorate
- Wet Chemistry analytes
- Cyanide
- Ammonia
- VOCs
- SVOCs
- TPH-GRO/DRO/ORO
- Organochlorine pesticides
- PCBs
- Radionuclides
- Dioxins/furans
- Asbestos

The tables in **BOLD** below present historical data associated with these LOU-specific analytes.

**LOU 5 Table 1 – Soil Characterization Data – Wet Chemistry**

**Notes:**

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. U.S. EPA, Region 6, Medium Specific Screening Levels (MSSLs) for Industrial - Outdoor Worker (March, 2008).
  - (a) Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
  - (b) Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
  - (h) Dioxins and furans were expressed as 2,3,7,8- TCDD TEQ (toxic equivalents), calculated using the TEFs published by Van den Berg et al., 2006.
  - (v) USEPA. 1998. Approach for Addressing Dioxin in Soil at CERCLA and RCRA Sites. OSWER Directive 9200.4-26. April, 1998. A value of 1000 ng/kg is applicable to residential soils. The range of 5000 to 20000 ng/kg is applicable to commercial/industrial soils. The Agency for Toxic Substances and Disease Registry (ATSDR) provides a screening level of 50 ng/kg for dioxin in residential soil [<http://www.atsdr.cdc.gov/substances/dioxin/policy/>].

**Notes:**

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.
  - (j) Secondary Drinking Water Regulation value.
  - (p) The national primary drinking water regulations (b) lists a treatment technology action level of 1.3 mg/l as the MCL for Copper. Therefore, the secondary value is not used.
  - (u) See footnote (b). Treatment technology action level.
  - (a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

**Notes:**

1. ENSR, 2007, Quarterly Performance Report for Remediation Systems, Tronox LLC, Henderson, Nevada, July-September 2007, November 2007.

2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.

(a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

(m) Equal to the provisional action level derived by NDEP as referenced in "Defining a Perchlorate Drinking Water Standard". NDEP Bureau of Corrective Action. URL [http://ndep.nv.gov/bca/perchlorate02\_05.htm].

(j) Secondary Drinking Water Regulation value.

< = less than the reporting limit

Blank cell or --- = no data and or no qualifier

Qual = data qualifiers applied by laboratory or during data validation

TDS = Total Dissolved Solids

mg/l = milligram per liter

**Laboratory Qualifiers:**

d = the sample was diluted

**LOU 5**  
**Notes for Phase A Data Tables**

Tronox Facility - Henderson, Nevada

Blank	Not analyzed.
<b>Bold</b>	Bold values are constituents detected above the laboratory sample quantitation limit.
Gray	Grayed out values are non-detected values with the laboratory sample quantitation limits shown.
B	The result may be a false positive totally attributable to blank contamination.
D	Dissolved Metals
DO	Dissolved Oxygen
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity and the result may be biased low.
J+	The result is an estimated quantity and the result may be biased high.
JB	The result may be biased high partially attributable to blank contamination.
JK	The result is an estimated maximum possible concentration.
R	The result was rejected and unusable due to serious data deficiencies. The presence or absence of the analyte cannot be verified.
S	Soluable metals
T	Total Metals
U	The analyte was analyzed for, but was not detected above the laboratory sample quantitation limit.
UJ	The analyte was not detected above the laboratory sample quantitation limit and the limit is approximate.
mg/kg	Milligrams per kilogram
mg/L	Milligrams per liter
ml/min	Milliliters per minute
ng/kg	Nanogram per kilogram
nm	Not measured.
NTUs	Nephelometric Turbidity Units
ORP	Oxidation-reduction potential
pCi/g	PicoCuries per gram
pCi/L	PicoCuries per liter
s/gPM10	Revised protocol structures per gram PM10 fraction dust.
TEF	Toxic Equivalency Factor
TEQ	Toxic Equivalent Concentration
ug/kg	Micrograms per kilogram
ug/L	Micrograms per liter
umhos/cm	MicroSiemens per centimeter
L	Sample ID suffix indicating the sample was collected using low flow pumping rates (100-150 ml/min).
F	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min) and field filtered.
Z	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min)
*	No analytical data is available for this sample due to a laboratory error.
(a)	Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
(b)	Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
--	Not established
