### Introduction

This data review covers 18 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Tungsten, Uranium, Vanadium, and Zinc.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section IV.

Field duplicates are summarized in Section XIV.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5%.

### III. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

### IV. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

| Method Blank ID | Analyte  | Maximum<br>Concentration                                  | Associated Samples          |

### V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

### VI. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

### VII. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

### VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

### IX. Internal Standards

Raw data were not reviewed for this SDG.

### X. Furnace Atomic Absorption QC

All graphite furnace atomic absorption QC were within validation criteria.

### XI. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

### XII. Sample Result Verification and Project Quantitation Limit

All sample result verifications were acceptable.

The QAPP PQLs were met with the following exceptions:

| Sample                         | Analyte  | Finding  | Criteria   | Flag | A or P |
|--------------------------------|----------|--|--|------|--------|
| All samples in SDG<br>K0805394 | Selenium | Laboratory reporting limit reported at 6.0 ug/L. | PQL should be reported at 5.0 ug/L per the QAPP. | None | Р      |

All analytes reported below the PQL were qualified as follows:

| Sample                      |                                      |                 |        |
|-----------------------------|--------------------------------------|-----------------|--------|
| Sample                      | Finding                              | Flag            | A or P |
| All samples in SDG K0805394 | All analytes reported below the PQL. | J (all detects) | Α      |

### XIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

### XIV. Field Duplicates

Samples MC-66B and MC-66BD were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

|           | Concentra | ation (ug/L) |                 |                        |                 |        |
|-----------|-----------|--------------|-----------------|------------------------|-----------------|--------|
| Analyte   | MC-66B    | MC-66BD      | RPD<br>(Limits) | Difference<br>(Limits) | Flags           | A or P |
| Aluminum  | 220       | 838          | -               | 618 (≤50)              | J (all detects) | А      |
| Antimony  | 0.254     | 0.291        | -               | 0.037 (≤0.5)           | -               | -      |
| Arsenic   | 140       | 146          | 4 (≤30)         | -                      | -               | -      |

#### Introduction

This data review covers 21 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Tungsten, Uranium, Vanadium, and Zinc.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section IV.

Field duplicates are summarized in Section XIV.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5%.

### III. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

#### IV. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

| Method Blank ID | Analyte  | Maximum<br>Concentration  | Associated Samples          |
|-----------------|--|---|-----------------------------|
| PB (prep blank) | Arsenic<br>Boron<br>Thallium<br>Tungsten                               | 0.7 ug/L<br>21 ug/L<br>0.088 ug/L<br>0.5 ug/L   | All samples in SDG K0805722 |
| ICB/CCB         | Antimony Barium Beryllium Boron Iron Lead Molybdenum Thallium Tungsten | 0.014 ug/L 0.8 ug/L 0.1 ug/L 18.6 ug/L 4.3 ug/L 0.012 ug/L 5.9 ug/L 0.016 ug/L 0.1 ug/L | All samples in SDG K0805722 |
| ICB/CCB         | Arsenic  | 0.8 ug/L  | H-49AB<br>M-23B             |

| Method Blank ID | Analyte | Maximum<br>Concentration | Associated Samples                                   |
|-----------------|---------|--------------------------|--|
| ICB/CCB         | Arsenic | 1.1 ug/L                 | MC-94BF<br>M-5AB<br>M-6AB<br>M-67B<br>M-68B<br>M-95B |
| ICB/CCB         | Arsenic | 0.8 ug/L                 | FB062408GWarea1<br>MW-16B<br>EB062608GW3             |

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

| Sample          | Analyte                              | Reported<br>Concentration                   | Modified Final<br>Concentration                  |
|-----------------|--------------------------------------|---|--|

### V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

### VI. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

| Spike ID<br>(Associated<br>Samples)         | Analyte | %R (Limits)    | Flag             | A or P |
|---|---------|----------------|------------------|--------|
| M-7BBMS<br>(All samples in<br>SDG K0805722) | Boron   | 126.0 (75-125) | J+ (all detects) | Α      |

### VII. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

### VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

### IX. Internal Standards

All internal standard percent recoveries (%R) were within QC limits.

### X. Furnace Atomic Absorption QC

All graphite furnace atomic absorption QC were within validation criteria with the following exceptions:

| Analytical Spike | Analyte | %R (Limits)  | Associated Sample | Flag                                    | A or P |
|------------------|---------|--------------|-------------------|---|--------|
| M-5AB            | Arsenic | 84 (85-115)  | M-5AB             | J (all detects)<br>UJ (all non-detects) | Α      |
| MC-53B           | Arsenic | 116 (85-115) | MC-53B            | J (all detects)<br>UJ (all non-detects) | A      |

### XI. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

### XII. Sample Result Verification and Project Quantitation Limit

All sample result verifications were acceptable.

The QAPP PQLs were met with the following exceptions:

| Sample                         | ole Analyte Finding Criteria |  | Criteria   | Flag | A or P |
|--------------------------------|------------------------------|--|--|------|--------|
| All samples in SDG<br>K0805722 | Selenium                     | Laboratory reporting limit reported at 6.0 ug/L. | PQL should be reported at 5.0 ug/L per the QAPP. | None | Р      |

All analytes reported below the PQL were qualified as follows:

| Sample                      | Finding                              | Flag            | A or P |
|-----------------------------|--------------------------------------|-----------------|--------|
| All samples in SDG K0805722 | All analytes reported below the PQL. | J (all detects) | А      |

### XIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

### XIV. Field Duplicates

No field duplicates were identified in this SDG.

# VALIDATION FINDINGS WORKSHEET Initial and Continuing Calibration Calculation Verification

Page: l of l Reviewer: G2 2nd Reviewer: L

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found × 100 True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution True = concentration (in ug/L) of each analyte in the ICV or CCV source

## VALIDATION FINDINGS WORKSHEET **Level IV Recalculation Worksheet**

Reviewer: 2nd Reviewer: Page:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

Where, Found = Concentration of each analyte <u>measured</u> in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).

True = Concentration of each analyte in the source.

%R = Found × 100 True

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

S = Original sample concentration D = Duplicate sample concentration . Where, RPD = <u>IS-DL</u> x 100 (S+D)/2

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

%D = I-SDR x 100

Where, i=initial Sample Result (mg/L) (Instrument Reading x 5) SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

### Introduction

This data review covers 17 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Tungsten, Uranium, Vanadium, and Zinc.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section IV.

Field duplicates are summarized in Section XIV.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5% .

### III. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

### IV. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

| Method Blank ID | Analyte   | Maximum<br>Concentration   | Associated Samples   |

No field blanks were identified in this SDG.

### V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

### VI. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

| Spike ID<br>(Associated Samples)            | Analyte  | %R (Limits)   | Flag                                     | A or P |
|---|----------|---------------|--|--------|
| SA87-10BMS<br>(All samples in SDG K0805780) | Antimony | 34.4 (75-125) | J- (all detects)<br>UJ (all non-detects) | А      |
|   | Tungsten | 63.6 (75-125) | J- (all detects)<br>UJ (all non-detects) |        |

| Spike ID<br>(Associated Samples)             | Analyte              | %R (Limits)                    | Flag  | A or P |
|--|----------------------|--------------------------------|---|--------|
| SA87-10BMS<br>(SA87-10B)                     | Titanium             | 58.9 (75-125)                  | J- (all detects)<br>UJ (all non-detects)                                    | А      |
| SA180-10BMS<br>(All samples in SDG K0805780) | Antimony<br>Tungsten | 38.6 (75-125)<br>59.9 (75-125) | J- (all detects) UJ (all non-detects) J- (all detects) UJ (all non-detects) | А      |
| SA180-10BMS<br>(SA180-10B)                   | Manganese            | 189.2 (75-125)                 | J+ (all detects)  | А      |

### VII. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

| DUP ID<br>(Associated<br>Samples) | Analyte             | RPD (Limits)             | Difference (Limits) | Flag  | A or P |
|-----------------------------------|---------------------|--------------------------|---------------------|---|--------|
| SA87-10BDUP<br>(SA87-10B)         | Sodium<br>Strontium | 22.6 (≤20)<br>21.4 (≤20) | -<br>-              | J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects) | А      |
| SA180-10BDUP<br>(SA180-10B)       | Barium<br>Manganese | 23.5 (≤20)<br>21.0 (≤20) | -                   | J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects) | А      |

### VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

### IX. Internal Standards

Raw data were not reviewed for this SDG.

### X. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in this SDG.

### XI. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met with the following exceptions:

| Diluted Sample | Analyte | %D (Limits) | Associated Samples             | Flag                                 | A or P |
|----------------|---------|-------------|--------------------------------|--------------------------------------|--------|
| SA87-10BL      | Cobalt  | 16.9 (≤10)  | All samples in SDG<br>K0805780 | J (all detects) UJ (all non-detects) | А      |
|                | Zinc    | 17.1 (≤10)  |                                | J (all detects) UJ (all non-detects) |        |

### XII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

| Sample                      | Finding  | Flag | A or P |
|-----------------------------|--|------|--------|
| All samples in SDG K0805780 | All samples in SDG K0805780 All analytes reported below the PQL. |      | А      |

Raw data were not reviewed for this SDG.

### XIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

### XIV. Field Duplicates

No field duplicates were identified in this SDG.

# VALIDATION FINDINGS WORKSHEET Matrix Spike Analysis

Reviewer: 2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

| Y N N/A | Was a matrix spike analyzed for each matrix in this SDG?
| Y N N/A | Were matrix spike percent recoveries (%R) within the control limits of 75-1257) If the cample control limits of 75-1257

of 4 or more, no action was taken.

Was a post digestion spike analyzed for ICP elements that did not meet the required criteria for matrix spike recovery?

Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations. LEVEL IV ONLY:

# VALIDATION FINDINGS WORKSHEET **Duplicate Analysis**

Reviewer:\_\_ Page: 2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

No. N/A

Was a duplicate sample analyzed for each matrix in this SDG?

YON N/A

Were all duplicate sample relative percent differences (PDN)

Were all duplicate sample relative percent differences (RPD) < 20% for water samples and < 35% for soil samples? If no, see qualifications below. A control limit of ±R.L. (±2X R.L for soil) was used for sample values that were <5X the R.L., including the case when only one of the duplicate sample values was <5X R.L.. If field blanks were used for laboratory duplicates, note in the Overall Assessment.

LEVEL IV ONLY:

Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

# VALIDATION FINDINGS WORKSHEET ICP Serial Dilution

Page: 1 of 1 Reviewer: 2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

N N/A

If analyte concentrations were > 50X the IDL, was an ICR serial dilution percent differences (%D) < 10%?

Y N N/A

Were ICP serial dilution percent differences (%D) < 10%?

Y N N/A

Is there evidence of negative interference? If yes, professional judgement will be used to qualify the data.

Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations. Y N N/A

# Laboratory Data Consultants, Inc. Data Validation Report

Project/Site Name:

Tronox LLC Facility, 2008 Phase B Investigation,

Henderson, Nevada

**Collection Date:** 

June 29 through June 30, 2008

LDC Report Date:

August 24, 2009

Matrix:

Water

Parameters:

Metals

Validation Level:

Stage 2B

Laboratory:

Columbia Analytical Services, Inc.

Sample Delivery Group (SDG): K0805919

Sample Identification

M-79B

M-84B

M-126B

M-14ABF

M-14ADBF

#### Introduction

This data review covers 5 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Tungsten, Uranium, Vanadium, and Zinc.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section IV.

Field duplicates are summarized in Section XIV.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. ICPMS Tune

The mass calibration was within 0.1 AMU and the percent relative standard deviation (%RSD) was less than or equal to 5%.

#### III. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

#### IV. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

| Method Blank ID | Analyte   | Maximum<br>Concentration  | Associated Samples          |
|-----------------|---|---|-----------------------------|
| PB (prep blank) | Boron<br>Copper<br>Lead<br>Magnesium<br>Molybdenum<br>Sodium<br>Thallium<br>Zinc          | 4.4 ug/L<br>1.8 ug/L<br>0.089 ug/L<br>6.9 ug/L<br>1.3 ug/L<br>128 ug/L<br>0.186 ug/L<br>0.7 ug/L        | All samples in SDG K0805919 |
| ICB/CCB         | Aluminum Antimony Boron Barium Cobalt Copper Magnesium Strontium Sodium Thallium Tungsten | 4.0 ug/L 0.014 ug/L 10.7 ug/L 2.0 ug/L 0.4 ug/L 2.1 ug/L 4.3 ug/L 0.4 ug/L 200 ug/L 0.009 ug/L 0.1 ug/L | All samples in SDG K0805919 |

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

| Sample   | Analyte    | Reported<br>Concentration | Modified Final<br>Concentration |
|----------|------------|---------------------------|---------------------------------|
| M-79B    | Aluminum   | 27.8 ug/L                 | 50.0U ug/L                      |
|          | Cobalt     | 0.7 ug/L                  | 10.0U ug/L                      |
|          | Zinc       | 1.4 ug/L                  | 10.0U ug/L                      |
| M-84B    | Aluminum   | 14.9 ug/L                 | 50.0U ug/L                      |
|          | Cobalt     | 0.3 ug/L                  | 10.0U ug/L                      |
|          | Lead       | 0.139 ug/L                | 0.200U ug/L                     |
|          | Molybdenum | 8.6 ug/L                  | 10.0U ug/L                      |
|          | Thallium   | 0.194 ug/L                | 0.200U ug/L                     |
|          | Zinc       | 2.5 ug/L                  | 10.0U ug/L                      |
| M-126B   | Cobalt     | 1.0 ug/L                  | 10.0U ug/L                      |
|          | Copper     | 3.0 ug/L                  | 10.0U ug/L                      |
|          | Molybdenum | 7.2 ug/L                  | 10.0U ug/L                      |
|          | Zinc       | 2.1 ug/L                  | 10.0U ug/L                      |
| M-14ABF  | Cobalt     | 0.5 ug/L                  | 10.0U ug/L                      |
|          | Zinc       | 1.3 ug/L                  | 10.0U ug/L                      |
| M-14ADBF | Copper     | 1.1 ug/L                  | 10.0U ug/L                      |
|          | Zinc       | 0.8 ug/L                  | 10.0U ug/L                      |

Sample FB062408GWarea1 (from SDG K0805722) was identified as a field blank. No metal contaminants were found in this blank with the following exceptions:

| Field Blank ID  | Sampling<br>Date | Analyte  | Concentration  | Associated Samples             |
|-----------------|------------------|--|--|--------------------------------|
| FB062408GWarea1 | 6/24/08          | Arsenic<br>Boron<br>Calcium<br>Iron<br>Magnesium<br>Tungsten | 1.6 ug/L<br>49 ug/L<br>12.0 ug/L<br>2.9 ug/L<br>1.2 ug/L<br>0.4 ug/L | All samples in SDG<br>K0805919 |

Sample PB061608B (from SDG K0805394) was identified as a pump blank. No metal contaminants were found in this blank with the following exceptions:

| Pump Blank ID | Sampling<br>Date | Analyte   | Concentration   | Associated Samples             |
|---------------|------------------|---|---|--------------------------------|
| PB061608B     | 6/16/08          | Aluminum Barium Boron Calcium Cobalt Copper Iron Lead Magnesium Manganese Molybdenum Nickel Sodium Strontium Titanium Tungsten Zinc | 37.6 ug/L 1.8 ug/L 39.6 ug/L 265 ug/L 0.4 ug/L 1.0 ug/L 57.4 ug/L 0.785 ug/L 63.1 ug/L 55.6 ug/L 1.2 ug/L 0.6 ug/L 83.5 ug/L 1.4 ug/L 2.8 ug/L 0.5 ug/L | All samples in SDG<br>K0805919 |

Sample concentrations were compared to concentrations detected in the field blanks as required by the QAPP. No sample data was qualified with the following exceptions:

| Sample  | Analyte  | Reported<br>Concentration  | Modified Final<br>Concentration   |
|---------|--|--|---|

|          | Zinc      | 0.8 ug/L                  | 10.0U ug/L                      |

## V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

#### VI. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

### VII. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

## VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### IX. Internal Standards

Raw data were not reviewed for this SDG

### X. Furnace Atomic Absorption QC

All graphite furnace atomic absorption QC were within validation criteria.

#### XI. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

## XII. Sample Result Verification and Project Quantitation Limit

All sample result verifications were acceptable.

The QAPP PQLs were met with the following exceptions:

| Sample                         | Analyte  | Finding  | Criteria   | Flag | A or P |
|--------------------------------|----------|--|--|------|--------|
| All samples in SDG<br>K0805919 | Selenium | Laboratory reporting limit reported at 6.0 ug/L. | PQL should be reported at 5.0 ug/L per the QAPP. | None | Р      |

All analytes reported below the PQL were qualified as follows:

| Sample                      | Finding                              | Flag            | A or P |
|-----------------------------|--------------------------------------|-----------------|--------|
| All samples in SDG K0805919 | All analytes reported below the PQL. | J (all detects) | А      |

#### XIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

## XIV. Field Duplicates

Samples M-14ABF and M-14ADBF were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

|          | Concentra | tion (ug/L) |                 |                        |          |        |
|----------|-----------|-------------|-----------------|------------------------|----------|--------|
| Analyte  | M-14ABF   | M-14ADBF    | RPD<br>(Limits) | Difference<br>(Limits) | Flags    | A or P |
| Antimony | 0.136     | 0.126       | <u>-</u>        | 0.01 (≤0.5)            | -        | -      |
| Arsenic  | 121       | 112         | 8 (≤30)         | -                      | -        | -      |
| Barium   | 14.9      | 14.5        | -               | 0.4 (≤5.0)             | -        | -      |

# VALIDATION FINDINGS WORKSHEET ICP Interference Check Sample

Page: 2nd Reviewer: Reviewer: 6

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

| N/A | N/A | Were ICP interference check samples performed as required?
| YAN | N/A | Were the AB solution percent recoveries (%R) within the control limits of 80-120% |
| LEVEL IV ONLY: | Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.
