

Summary of Available Data for LOU 35
Truck Emptying/Dumping Site
Tronox Facility – Henderson, Nevada

| | |
|---------------------------------|---|
| Name of Facility: | Truck Emptying/Dumping Site |
| Goal of Closure: | <ul style="list-style-type: none"> • Closure for future commercial/industrial use. |
| Site Investigation Area: | <ul style="list-style-type: none"> • Size: Approximately 480 feet by 320 feet east-west (3.5 acres) and about four feet deep [Ref. 4]. • Location: South-central portion of the Site, along the western boundary and south of Beta Ditch. • Current Status/Features: This area is no longer active. The area is currently vacant and consists of three soil surfaced basins. |
| Description: | <ul style="list-style-type: none"> • The site was used periodically between 1969 and 1991 [Ref. 4]. • It consists of three approximately equal sized basins. Southern basin is not connected to central basin. Central and northern basins are interconnected [Ref. 2]. • All three basins are unlined [Ref. 2]. • The nature of wastes deposited is unknown, but reportedly included “inorganic wastes” [Ref. 1]. • Trucks entered the southern area and deposited substances such as soda ash and lime [Ref. 4]. • A 1979 aerial photograph indicates solid waste or debris in the southern one-third of the area [Ref. 4]. • In 1991, an inspection indicated white discoloration and several piles of white material in the southern basin [Ref. 4]. • Outer edges of the basin were graded into berms to prevent entry in 1991 [Ref. 4]. • No evidence of waste disposal was observed in 2007 [Ref. 3]. • A segment of the Acid Drain System (LOU 60) runs along the southern and eastern boundary of LOU 35. The acid drain system was operated from 1942 to 1976 and carried unknown waste from off-site facilities to the west. |

| Process Waste Streams Associated with LOU 35 | Known or Potential Constituents Associated with LOU 35 |

|--|---|
| Unknown liquid and solid wastes associated with the truck dumping/emptying activities. | <ul style="list-style-type: none"> • Metals • Hexavalent chromium • Perchlorate • Chlorate • Ammonia • Wet chemistry analytes • VOCs • SVOCs • TPH-DRO/ORO • Organochlorine pesticides • Radionuclides |
| Process Waste Stream Associated with the Acid Drain System (LOU 60) | |
| Unknown liquids and solid wastes from off-site properties to the west. | <ul style="list-style-type: none"> • Metals • Hexavalent chromium • Perchlorate • Chlorate • Ammonia • Wet chemistry analytes • VOCs • SVOCs • TPH-DRO/ORO • Organochlorine pesticides • Radionuclides |

Overlapping Adjacent LOUs:

The following LOUs overlap or are adjacent to LOU 35:

Overlapping LOUs

- LOU 60 (Acid Drain System) – Overlaps the southern (upgradient) and eastern (crossgradient) boundary of LOU 35.

Adjacent LOUs

- LOU 64 (Koch Materials Company Site) – East (crossgradient) of LOU 35.

LOU 64 is crossgradient and is not considered to affect LOU 35; therefore, no additional chemical classes have been added to the analytical plan for LOU 35. For detailed information on LOUs listed above, please refer to the specific LOU data package.

Summary of Available Data for LOU 35
Truck Emptying/Dumping Site
Tronox Facility – Henderson, Nevada

**LOUs Potentially Affecting Soils
in LOU 35:**

- LOU 60 – Acid Drain System: The Acid Drain System carried effluent from onsite and offsite sources to the acid effluent neutralization plant. The offsite line entered LOU 35 from the west and carried unknown process waste streams. Waste carried by the system from off site facilities to the west could potentially impact LOU 35 in case of leakage from the system. Known or potential chemical classes associated with LOU 60 are consistent with those listed for LOU 35; therefore, no additional chemical classes have been added to the Phase B Analytical Plan for LOU 35.

For detailed information please refer to the LOU 60 data package.

Known or Potential Chemical Classes:

- Metals
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH-DRO/ORO
- Organochlorine pesticides

Known or Potential Release Mechanisms:

- Potential infiltration to underlying soil and groundwater.
- Potential surface runoff if basins overflowed.
- Trucks emptied contents onto unlined basin surface.

Results of Historical Sampling:

- Eight soil borings drilled in southern basin in 1997 to test for EPA metals, pH, TPH, and VOCs. Analytical results are summarized: LOU 35 Table 6 (see attached) [Ref. 1].

Did Historical Samples Address Potential Release?

- Not completely. Historical borings were limited in depth and constituents tested, and were not representative of the full extent of LOU 35.

Summary of Phase A SAI:

Soil

- Phase A Investigation boring SA09 is located within LOU 35 and was specifically sampled to evaluate this LOU [Ref. 2].

**Summary of Available Data for LOU 35
Truck Emptying/Dumping Site
Tronox Facility – Henderson, Nevada**

Groundwater

- The closest groundwater sample (GWSA09) was collected from Phase A boring SA09 located within LOU 35 and was specifically sampled to evaluate this LOU [Ref. 2].

Chemical classes detected in Phase A soil boring SA09:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH-GRO
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

As a result of the Phase A data, the Phase B analytical plan for samples collected from LOU 35 will be expanded to include analyses for TPH-GRO, dioxins/furans, radionuclides, and asbestos.

- Analytical results for soil and groundwater from the Phase A sampling event are summarized: LOU 35 Tables 1 through 5 and 7 through 22 (see attached) [Ref. 2].

Are Phase A Sample Locations in “Worst Case” Areas?

- Not completely. The Phase A sample location (SA09) was not representative of the full extent of LOU 35.

Is Phase B Investigation Recommended?

- Yes

Proposed Phase B Soil Investigation/Rationale:

- The Phase B investigation of LOU 35 consists of collecting soil samples from four (4) locations:
 - One (1) boring will be drilled in the northwest corner of the LOU;
 - One (1) boring will be drilled in the approximate center of the LOU;
 - One (1) boring will be drilled in the southwest quadrant of the LOU; and
 - One (1) boring will be drilled in the southeast quadrant of the LOU.

Summary of Available Data for LOU 35
Truck Emptying/Dumping Site
Tronox Facility – Henderson, Nevada

- All four borings along with the analytical program to evaluate soil samples from LOU 35 are listed on **Table A – Soil Sampling and Analytical Plan for LOU 35**.
- Soil sample locations consist of both judgmental and randomly placed locations.
- Judgmental sample locations:
 - Designed to evaluate soil for known or potential chemical classes associated with LOU 35, based on the known process waste streams;
 - Three (3) sample locations (SA48, SA56 and SA166) are judgmental locations.
- Random sample locations:
 - Designed to assess whether unknown constituents associated with LOU 35 are present.
 - One (1) sample location (RSAO2) is a randomly-placed location.

Proposed Phase B Constituents List for Soils:

Both Judgmental and Random sample locations will be analyzed for the following constituents:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH DRO/ORO/GRO
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

Proposed Phase B Groundwater Investigation/Rationale:

- The Phase B groundwater investigation of LOU 35 consists of collecting groundwater samples from one location to evaluate local groundwater conditions and as part of the Site-wide evaluation of constituent trends in groundwater.
 - One (1) well (M-123) within the boundaries of LOU 35 will be sampled.
 - The analytical program to evaluate groundwater samples associated with LOU 35 is listed on **Table B – Groundwater Sampling and Analytical Plan for LOU 35**.

**Summary of Available Data for LOU 35
Truck Emptying/Dumping Site
Tronox Facility – Henderson, Nevada**

Proposed Phase B Constituents List for Groundwater: Groundwater samples will be analyzed for the following analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Radionuclides

Proposed Phase B Soil Gas Investigation/Rationale:

Soil gas samples will be collected from three (3) locations to evaluate area conditions for the presence of vapor-phase VOCs in the vadose zone.

- SG32 will be located adjacent to soil boring SA56 to investigate the former truck emptying/dumping area as a potential source and to assess VOCs from a groundwater source as indicated by the concentrations reported in Phase A Sample SA09 located within the LOU.
- SG61 will be located adjacent to soil boring RSAO2 to investigate the former truck emptying/dumping area as a potential source and to assess VOCs from a groundwater source as indicated by the concentrations reported in Phase A Sample SA09 located within the LOU.
- SG63 will be located adjacent to soil boring SA48 to investigate the former truck emptying and dumping area as a potential VOC source and to evaluate VOCs from a groundwater source as indicated by Phase A Sample SA09.
- SG83 will be located between well M-123 and Phase A boring SA09 to investigate the former truck emptying and dumping area as a potential VOC source and to evaluate VOCs from a groundwater source as indicated by Phase A Sample SA09.

Details of the soil gas sampling program are contained in the NDEP-approved (March 26, 2008) Soil Gas Survey Work Plan, Tronox LLC, Henderson, Nevada, dated March 20, 2008.

Proposed Phase B Soil Gas Constituents List:

- VOCs (EPA TO-15)

LOU-specific analytes identified include:

- Wet chemistry analytes
- Dioxins/furans
- Metals
- Organochlorine pesticides
- Perchlorate
- Radionuclides
- SVOCs
- TPH
- VOCs
- Asbestos

The tables in **BOLD** below present Phase A data associated with the LOU-specific analytes listed above.

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. U.S. EPA, Region 9, Preliminary Remediation Goals (PRGs) for industrial soil (October, 2004).
 - (a) Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
 - (b) Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
 - (h) Dioxins and furans were expressed as 2,3,7,8- TCDD TEQ (toxic equivalents), calculated using the TEFs (Toxic Equivalency Factors) published by Van den Berg et al., 2006.
 - (v) USEPA, 1998. Approach for Addressing Dioxin in Soil at CERCLA and RCRA Sites. OSWER Directive 9200.4-26. April, 1998. Midpoint of the range of 0.005 to 0.02 mg/kg for commercial/industrial soils.

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. Groundwater grab sample taken from open borehole.
- (j) Secondary Drinking Water Regulation value.
- (c) Equal to the USEPA Region 9 Preliminary Remediation Goals (PRGs) for tapwater (October, 2004).
- (p) The national primary drinking water regulations (b) lists a treatment technology action level of 1.3 mg/l as the MCL for Copper. Therefore, the secondary value is not used.
- (u) See footnote (b). Treatment technology action level.
- (a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

LOU 35 Table 6 (continued)
Summary of Historical Soil Analytical Data

Tronox Facility - Henderson, Nevada
 Truck Emptying/Dumping Site

Notes:

1. U.S. EPA, Region 9, Preliminary Remediation Goals (PRGs) for industrial soil (October, 2004).

2. pH analysis used Method 9045

3. TPH analysis used EPA Method 8015M-d in mg/kg.

ft bgs = feet below ground surface

mg/kg = milligrams per kilogram

TPH = Total Petroleum Hydrocarbons

ND = Not determined

NA = constituent was Not Analyzed

VOCs = Volatile organic compounds

(mm) PRG is based on the soil saturation limit. Therefore, the risk-based value provided in the electronic backup to the PRG table was used.

SVOCs = Semi-volatile organic compounds

-S= shallow sample (referred to as -S in text) collected from 0 to 12 inches bgs

-D = deep sample (referred to as -D in text) collected from 24 to 36 inches bgs

-DUP = Duplicate sample

< = Not detected above the designated PQL.

J = Estimated value, constituent detected at a level less than the practical quantitation limit and greater than the method detection limit.

* = Relative percent difference (RPD) for duplicate analysis exceeded acceptable quality control limits.

(X) = TPH heavier than diesel present. The concentration result was based on the area of the peaks within the retention time window of diesel-

Source: ENSR, 1997, Phase II ECA.

As - Arsenic

Ba - Barium

Cd - Cadmium

Total Cr - Total Chromium

Pb - Lead

Hg - Mercury

Se - Selenium

Ag - Silver

**** Analytes and detection limits for VOC's that were non-detect (µg/kg):**

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. U.S. EPA, Region 9, Preliminary Remediation Goals (PRGs) for industrial soil (October, 2004).
- (jj) Value for naphthalene used as surrogate for 2-methylnaphthalene based on structural similarities.
- (pp) Value for acenaphthene used as surrogate for acenaphthylene based on structural similarities.
- (oo) PRG is based on maximum (1E+05 mg/kg). Therefore, the risk-based value provided in the electronic backup to the PRG table was used.
- (w) Value for pyrene used as surrogate for benzo(g,h,i)perylene based on structural similarities.
- (n) Value for anthracene used as surrogate for phenanthrene due to structural similarities.

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.

2. U.S. EPA, Region 9, Preliminary Remediation Goals (PRGs) for industrial soil (October, 2004).

(mm) PRG is based on the soil saturation limit. Therefore, the risk-based value provided in the electronic backup to the PRG table was used.

(gg) Value for 1,3-dichloropropene used as surrogate for 1,1-dichloropropene, cis-1,3-dichloropropene and trans-1,3-dichloropropene based on structural similarities.

(hh) Value for 1,2,4-trichlorobenzene used as surrogate for 1,2,3-trichlorobenzene based on structural similarities.

(yy) PRG table (c) lists both cancer and non-cancer endpoint-based values. The cancer endpoint-based values were selected, as the cancer endpoint-based values are lower than the noncancer endpoint-based values.

(ii) Value for 1,2-dichloropropane used as surrogate for 2,2-dichloropropane based on structural similarities.

(nn) Value for methyl isobutyl ketone used as surrogate for 2-hexanone based on structural similarities.

(ww) Value for 2-chlorotoluene used as surrogate for 4-chlorotoluene based on structural similarities.

(qq) Value for bromodichloromethane used as surrogate for bromochloromethane due to structural similarities.

(xx) Value for methylene bromide used as surrogate for dibromomethane based on structural similarities.

(kk) Value for methyl tertbutyl ether (MTBE) used as surrogate for ethyl-tert-butyl ether (ETBE) based on structural similarities.

(zz) Isopropyl benzene is listed as cumene (isopropylbenzene) in the PRG table.

Notes for Phase A Data Tables
Tronox Facility, Henderson, Nevada

| | |
|-----------------------------|--|
| Blank | Not analyzed. |
| Bold | Bold values are constituents detected above the laboratory sample quantitation limit. |
| Gray | Grayed out values are non-detected values with the laboratory sample quantitation limits shown. |
| Truck Emptying/Dumping Site | |
| B | The result may be a false positive totally attributable to blank contamination. |
| DO | Dissolved Oxygen. |
| J | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. |
| J- | The result is an estimated quantity and the result may be biased low. |
| J+ | The result is an estimated quantity and the result may be biased high. |
| J+ | The result is an estimated quantity and the result may be biased high. |
| JB | The result may be biased high partially attributable to blank contamination. |
| JK | The result is an estimated maximum possible concentration. |
| R | The result was rejected and unusable due to serious data deficiencies. The presence or absence of the analyte cannot be verified. |
| S | Soluable metals |
| T | Total Metals. |
| U | The analyte was analyzed for, but was not detected above the laboratory sample quantitation limit. |
| UJ | The analyte was not detected above the laboratory sample quantitation limit and the limit is approximate. |
| mg/kg | Milligrams per kilogram. |
| mg/L | Milligrams per liter. |
| ml/min | Milliliters per minute. |
| ng/kg | Nanogram per kilogram. |
| nm | Not measured. |
| NTUs | Nephelometric Turbidity Units. |
| ORP | Oxidation-reduction potential. |
| pCi/g | PicoCuries per gram. |
| pci/L | PicoCuries per liter. |
| s/gPM10 | Revised protocol structures per gram PM10 fraction dust. |
| TEF | Toxic Equivalency Factor. |
| TEQ | Toxic Equivalent Concentration |
| ug/kg | Micrograms per kilogram. |
| ug/L | Micrograms per liter. |
| umhos/cm | MicroSiemens per centimeter. |
| L | Sample ID suffix indicating the sample was collected using low low-flow pumping rates (100-150 ml/min). |
| F | Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min) and field filtered. |
| Z | Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min). |
| * | No analytical data is available for this sample due to a laboratory error. |
| (a) | Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs). |
| (b) | Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs. |
| -- | PRG not established |
