

**Summary of Available Data for LOU 55  
Area Affected by July 1990 Fire  
Tronox Facility – Henderson, Nevada**

- Name of Facility:** LOU 55 – Area Affected by July 1990 Fire
- Goal of Closure:**
- Closure for future commercial/industrial use.
- Site Investigation Area:**
- Size: Approximately 130 feet by 175 feet (0.5 acre) [Ref. 4].
  - Location: North-central portion of the Site, approximately 70 feet south of the groundwater barrier wall.
  - Current Status/Features: The Area Affected by the July 1990 Fire consisted of a concrete pad for storage of ammonium perchlorate (AP) product. LOU 55 is no longer in operation but the pad remains.
- Description:**
- The former AP pad drum storage area at LOU 55 consisted of a concrete pad, constructed in early 1950s, used for storage of 55-gallon drums containing AP product [Ref. 4].
  - The fire occurred on July 18, 1990 when a drum ignited. Four hundred drums (100 tons) of AP burned and approximately 50,000 pounds of hydrogen chloride fumes were released over the 45-minute duration of fire [Ref. 4].
  - Soil surrounding the pad was impacted with AP and decomposition products from the fire-fighting wash water draining off the pad. Impacted soil was excavated, drummed, and transported off-site for disposal as non-hazardous waste at a hazardous waste landfill in Beatty, Nevada [Refs. 1 and 4].

**Overlapping or Adjacent LOUs:** The following LOUs overlap or are adjacent to LOU 55:

Overlapping LOUs

- No overlapping LOUs were identified for LOU 55.

Adjacent LOUs

- LOU 31 (Drum Recycling Area) – Located approximately 125 feet to the southwest (upgradient) of LOU 55.
- LOU 32 (Chromium and Perchlorate Groundwater Remediation Unit) – Located north (downgradient) of LOU 55.

LOU 32 is downgradient of LOU 55; therefore this LOU is not considered to affect LOU 55. LOU 31 is upgradient of LOU 55; however, LOU 55 is not considered to be affected by LOU 31 because LOU 31 was used for crushing cleaned AP drums and the potential for releases from LOU 31 is considered to be minimal. In addition, no releases have been documented from LOU 31 and the chemicals used at both LOUs would have been the same. Therefore, the addition of other chemical classes to the Phase B Analytical Plan for LOU 55 is not required.

For detailed information on the LOUs listed above, please refer to the specific LOU data package.

**LOUs Potentially Affecting Soils in LOU 55:**

- None identified.

**Known or Potential Chemical Classes:**

- Metals
- Perchlorate
- Wet chemistry analytes
- Dioxins/Furans
- SVOCs

**Known or Potential Release Mechanisms:**

- Fire and subsequent surface runoff of fire-fighting water to surrounding soils [Ref. 4].

**Summary of Available Data for LOU 55  
Area Affected by July 1990 Fire  
Tronox Facility – Henderson, Nevada**

- Results of Historical Sampling:**
- No historical soil sampling was identified in the documents reviewed for this LOU.
  - Cross-gradient (M-64 and M-65), downgradient (M-55 and M-78), and upgradient (M-25 and M-38) groundwater monitoring wells are routinely tested for perchlorate, total chromium, and TDS as part of a periodic or routine groundwater monitoring program. Analytical results are summarized on LOU 55 Table 6 (see attached) [Ref. 3].

- Did Historical Samples Address Potential Release?**
- No historical soil samples were identified for this LOU.

**Summary of Phase A SAI:**

Soil:

- Boring SA20 is located within LOU 55 and was specifically sampled to evaluate this LOU.

Groundwater:

- Well M-55 is located approximately 20 feet to the north (downgradient) of LOU 55 and was specifically sampled to evaluate this LOU.

Chemical classes detected in Phase A soil borings from SA20 include the following:

- Metals
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- Organochlorine pesticides

As a result of the Phase A data, the Phase B Analytical Plan for samples collected from LOU 55 will be expanded to include analyses for hexavalent chromium, organochlorine pesticides, dioxins/furans, and radionuclides.

- Analytical results for soil and groundwater from the Phase A sampling event are summarized in tables LOU 55 Tables 1 through 5 and LOU 55 Tables 7 through 20 [Ref. 3] (see attached).

Blank	Not analyzed.
<b>Bold</b>	Bold values are constituents detected above the laboratory sample quantitation limit.
Gray	Grayed out values are non-detected values with the laboratory sample quantitation limits shown.
B	The result may be a false positive totally attributable to blank contamination.
D	Dissolved Metals
DO	Dissolved Oxygen
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity and the result may be biased low.
J+	The result is an estimated quantity and the result may be biased high.
JB	The result may be biased high partially attributable to blank contamination.
JK	The result is an estimated maximum possible concentration.
