Notes:

¹AP Area extraction wells were tested in October 2016 and began operating continuously in November 2016. Mass removal numbers presented were originally reported in the GWETS operation monthly reports submitted to NDEP by Envirogen. Concentrations and mass removals shown for AP Area extraction wells are for hexavalent chromium. Concentrations and mass removals shown for well fields are for total chromium.

Mass removal rates presented in this spreadsheet were determined using a methodology which has been approved by NDEP (Tetra Tech 2015).

Though chromium treatment has occurred at the Site since the mid-1980s, complete chromium concentration and/or pumping data sets for reporting years prior to July 2004 are not available.

-- = no data available

gpm = gallons per minute

Notes:

The effluent composite results above are the same as those used in the Discharge Monitoring Reports (DMRs) associated with the Site's National Pollution Discharge Elimination System (NPDES) Permit NV0023060. Prior to late January 2017, effluent associated with the Site's NPDES permit consisted of discharge from the Site's fluidized bed reactor (FBRs). After late January 2017, NPDES effluent included flow from both the FBRs and a newly installed ion exchange (IX) treatment system.

mg/L = milligrams per liter

NA = not analyzed

SQL = Sample Quantitation Limit

H = Sample was prepped or analyzed beyond the specified holding time

J = Result is less than the reporting limit but greater than or equal to the method detection limit and the concentration is an approximate value

Notes:

¹Monthly mass removal information is not available prior to October 2002. The data as shown represent the estimated total mass removed from system start-up through September 2002, presented as total pounds. These numbers were estimated based on total mass removal information available in the former Perchlorate Removed from the Environment Submittal, which was previously submitted to NDEP quarterly through fourth quarter 2014.

²AP Area extraction wells were tested in October 2016 and began operating continuously in November 2016. Mass removal numbers presented were originally reported in the GWETS operation monthly reports submitted to NDEP by Envirogen.

Mass removal information presented in this spreadsheet from months prior to January 2015 was calculated using the historic mass removal calculation methodology. Beginning in January 2015, perchlorate removal was determined using a revised methodology which has been approved by NDEP (Tetra Tech 2015).

Complete perchlorate concentration and/or pumping data sets for reporting years prior to July 2004 are not available. Perchlorate removal values presented in this table for October 2002 - June 2004 were taken from prior reports.

Mass removal information for March, April, and May 2017 may differ slightly from data previously presented in GWETS Operation Monthly Reports due to a laboratory error. The laboratory has corrected the error and issued revised reports, and the data as shown reflect these revised reports.

-- = no data available

gpm = gallons per minute

lbs = pounds

mg/L = milligrams per liter

Notes:

The effluent composite results above are the same as those used in the Discharge Monitoring Reports (DMRs) associated with the Site's National Pollution Discharge Elimination System (NPDES) Permit NV0023060. Prior to late January 2017, effluent associated with the Site's NPDES permit consisted of discharge from the Site's fluidized bed reactor (FBRs). After late January 2017, NPDES effluent included flow from both the FBRs and a newly installed ion exchange (IX) treatment system.

TABLE 9: WEEKLY PERCHLORATE IN EFFLUENT DISCHARGE**JULY 2016 - JUNE 2017****Nevada Environmental Response Trust Site****Henderson, Nevada**

Sample Date	Effluent Location	Perchlorate by EPA 314 (mg/L)	Perchlorate SQL (mg/L)
-------------	-------------------	----------------------------------	---------------------------

The 0.039 mg/L result on 8/6/2016 is believed to be from cross-contamination during compositing of the 7-day (7/31/2016-8/6/2016) composite sample. Following receipt of the 0.039 mg/L sample result, the individual daily effluent samples collected between 7/31/2016 and 8/6/2016, as well as a new 7-day composite sample, were submitted for perchlorate analysis. All re-analyzed effluent samples were non-detect for perchlorate.

The 0.034 mg/L result on 2/11/2017 is believed to be from cross-contamination during compositing of the 7-day (2/5/2017-2/11/2017) composite sample. Following receipt of the 0.034 mg/L sample result, the individual daily effluent samples collected between 2/5/2017 and 2/11/2017, as well as a new 7-day composite sample, were submitted for perchlorate analysis. All re-analyzed effluent samples were non-detect for perchlorate.

H = Sample was prepared or analyzed beyond the specified holding time

U^ = Instrument related QC is outside acceptance limits.

mg/L = milligrams per liter

¹ 2007 third quarter mass loading estimate missing for Las Vegas Wasteway and Pabco Road.² 2009 first quarter mass loading estimate missing for Northshore Road.³ January 2016 through February 2017 discharge data were not available for Las Vegas Wasteway. 2015 average monthly discharge rates were used instead to estimate loading during this timeframe.⁴ Envirogen began collecting monthly perchlorate samples at Pabco Road in November 2016, and Tetra Tech began collecting monthly perchlorate samples at Pabco Road and Northshore Road in June 2017. These samples are included in the loading calculation for 2016/2017.
