

TECHNICAL MEMORANDUM

To: Nevada Environmental Response Trust

Cc: Nevada Division of Environmental Protection
United States Environmental Protection Agency

From: Dana Grady

Date: November 3, 2020

Subject: Seep Well Field Area Bioremediation Treatability Study Quarterly Progress Report

At the direction of the Nevada Environmental Response Trust (NERT or Trust), Tetra Tech, Inc. (Tetra Tech) has prepared this memorandum which summarizes Tetra Tech's progress from July through September 2020 toward successfully implementing the Seep Well Field (SWF) Area Bioremediation Treatability Study.

Task Progress Update: August – September 2020

Task M11 – Seep Well Field Area Bioremediation Treatability Study (SWFTS)

- Task Leader – Dana Grady
- Current Status
 - As presented in Treatability/Pilot Study Modification No. 6, the ongoing efforts related to the SWF Area Bioremediation Treatability Study focus on refinement of operations and maintenance techniques (O&M) associated with long-term implementation of in situ bioremediation (ISB) in the vicinity of the SWF and Las Vegas Wash. For reference, Figure 1 provides a map of the injection and monitoring well locations. Well construction details and a summary of the groundwater analytical results for perchlorate, chlorate, nitrate, total organic carbon (TOC), and dissolved oxygen through August 2020 are provided in Tables 1 and 2, respectively.
 - O&M of SWF Area Bioremediation Treatability Study:
 - The sixth injection event was conducted from May 27 through June 19, 2020 via in-line mixing in accordance with the Field Guidance Document for In-Line Mixing and Injection approved by NDEP on March 24, 2020. Details of the sixth injection event, including a summary of injection rates, pressures, quantities, and specific gravity information, are included in Tables 3 through 7 as an attachment to this quarterly progress report. All other field details, such as field notes, EOS Certificate of Analysis, Cascade field reports, and photo logs, will be included in the 2020 Annual Results Report.
 - Overall system performance and resulting operation and maintenance requirements continue to be reasonable and no well maintenance activities are required at this time.
 - Performance of the SWF Area Bioremediation Treatability Study

- Results of the July 2020 and August 2020 groundwater sampling events (following the sixth injection event) were received during the third quarter 2020 and are summarized below.
 - Groundwater samples collected from the four monitoring wells located between the injection well transects observed an average percentage decrease in perchlorate concentrations of 84% in the August 2020 sampling event. This is the highest reduction witnessed since August 2019. Noteworthy findings are described below:
 - Groundwater perchlorate concentrations were not detected above the sample detection limit in samples collected from monitoring wells SWFTS-MW14 and SWFTS-MW16 following the sixth injection event in July 2020. Perchlorate concentrations in groundwater samples collected from monitoring well SWFTS-MW14 slightly increased to 210 µg/L in August 2020, which is still a decrease of greater than 99 percent when compared to baseline concentrations.
 - Of particular significance during this quarter is the large perchlorate concentration decrease observed in the July and August 2020 groundwater samples collected from SWFTS-MW15. The August 2020 groundwater sample collected from SWFTS-MW15 indicated that the perchlorate concentration was 4,400 µg/L, which represents the lowest concentration to date at this location and a 71 percent decrease from the baseline concentration of 15,000 µg/L.
 - Although perchlorate concentration reductions remain greater than 60 percent at SWFTS-MW02, groundwater samples collected from this well began showing increases in perchlorate concentrations following the fifth injection event. As noted in the previous quarterly report, groundwater perchlorate concentrations have significantly increased in monitoring well SWFTS-MW04, which is located generally upgradient of SWFTS-MW02. Even though groundwater perchlorate concentrations have decreased in samples collected from this upgradient monitoring well during this quarter compared to last quarter, the perchlorate concentrations remain higher than typical concentrations recorded throughout most of the treatability study timeframe.
 - Perchlorate concentrations in groundwater samples collected from the 16 downgradient monitoring wells also continue to show reductions, which averaged 55 percent when compared to baseline. Noteworthy findings are described below:
 - Perchlorate concentrations in groundwater samples collected from downgradient monitoring wells PC-91 and SWFTS-MW20 were observed to be at the lowest concentrations since the study began, with concentrations below the sample detection limit and at 89 µg/L, respectively.
 - Groundwater samples collected from 15 of the 16 downgradient monitoring wells indicated perchlorate concentration reductions when compared to baseline concentrations, with groundwater samples from 12 monitoring wells indicating perchlorate concentration reductions ranging from 50 to 100 percent. Perchlorate concentrations in groundwater samples collected from 4 of the 16 downgradient monitoring wells (namely, PC-92, SWFTS-MW09B, SWFTS-MW10A, and SWFTS-MW22) indicate a slower response to the recent injection event. This behavior could be partly due to increased upgradient perchlorate concentrations and/or paleochannels in the vicinity and will continue to be evaluated following further injection and monitoring events.
 - Chlorate concentrations in groundwater follow trends similar to perchlorate, with samples from 14 monitoring wells (located both between the injection well transects

and downgradient) exhibiting greater than 70% reduction in chlorate concentrations in groundwater samples collected during the July and/or August 2020 sampling events when compared to the baseline sampling event. Chlorate concentrations in groundwater were less than 100 µg/L at eight monitoring wells during the July and August 2020 sampling events.

- Nitrate concentrations in groundwater were also evaluated since it is often a competing electron acceptor and carbon substrate consumer. Nitrate concentrations in groundwater were generally greater than 10 milligrams per liter (mg/L) during the baseline sampling event. During the July and August 2020 sampling events, groundwater samples from 9 downgradient monitoring wells have nitrate concentrations at or less than 5 mg/L.
- As previously noted in recent quarterly reports, groundwater perchlorate concentrations in upgradient well SWFTS-MW12 continue to remain below sample detection limits. This well is located approximately 150 feet upgradient of the injection wells and is the well from which most of the distribution water was extracted during the fifth injection event. During the most recent sixth injection event in May – June 2020, the volume extracted from SWFTS-MW12 was decreased from previous injection events to potentially reduce the impact of groundwater extraction during injections on concentrations at SWFTS-MW12. Groundwater samples collected in July and August 2020 also indicated chlorate and nitrate concentrations less than the sample detection limit and TOC concentrations at approximately 10 mg/L. However, TOC concentrations were much less after the sixth injection event (13 and 9.3 mg/L in July and August 2020, respectively) than the high of 560 mg/L measured at the end of 2019 following the fifth injection event. As a result, it is expected that over time, perchlorate concentrations would gradually return to baseline levels at this upgradient location.
- Schedule and Progress Updates
 - This task remains on schedule.
 - The next groundwater sampling event is scheduled for the week of October 12, 2020.
- Health and Safety
 - There were no safety incidents related to Task M11 during the reporting period July through September 2020.

Notes:

mg/L - milligrams per liter

ug/L - micrograms per liter

-- not analyzed

< The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

E Instrument error during sampling

							Daily Summary	0	12,684
							June Summary	28,409	344,449
							Injection Event Summary	76,493	344,449

Notes:

gpm gallons per minute
min minutes

gal gallons
psi pounds per square inch

¹Injection duration indicates the total minutes of active injection per day, accounting for any downtime in injections that may have occurred throughout the day. Therefore, injection duration may be less than the difference in daily injection start and stop times indicated.

²Chemical amendments consisting of 60 pounds of sodium sulfite, 60 gallons of glycerin, and 23 gallons of AquaPure phosphate solution were mixed with the first 15,259 gallons of distribution water injected on June 4, 2020. Carbon substrate injections concluded on June 3, 2020.

Table 5
Batch Injection Quantities
Injection Event 6 - May/June 2020
Seep Well Field Area Bioremediation Treatability Study

Components	Batch						
	1	2	3	4	5	6	7
EVO (gallons) ⁽¹⁾	17084						
Glycerin (gallons)	64	80	64	64	20	15	60
AquaPure (gallons)	20	26	20	20	6	5	23
Sodium Sulfite (pounds)	50	62	50	50	16	12	60
Water (gallons)	11506	15799	10440	11181	3562	2620	15259
Total Injectate Solution (gallon)	11590	15905	10524	11265	3588	2640	15342

(1) Emulsified vegetable oil (EVO) was injected via in-line mixing with batches of water amended with glycerin, AquaPure phosphate solution, and sodium sulfite. Due to the inability to precisely control the ratio of EVO to amended groundwater injected during injection via in-line mixing, the entire targeted EVO volume was injected prior to injection of the final seventh batch of amended water.

Notes:

Dup - sample duplicate

SD - standard deviation

1. Injectate solution includes emulsified vegetable oil (EOS_{PRO}), phosphate solution (Aquapure 3601 NSF), glycerin, and sodium sulfite mixed into extracted groundwater. A 1:4 injectate stock solution standard was prepared for each tank of EOS_{PRO}.

2. Due to high viscosity of the EOS_{PRO}, a new measurement of specific gravity of pure EOS_{PRO} with amendments was not able to be collected. Reported specific gravity measurements for pure EOS_{PRO} with amendments were collected in October 2019 during the fifth injection event.

Table 7
Specific Gravity Measurements
Injection Event 6 - May to June 2020
Seep Well Field Area Bioremediation Treatability Study

EOS _{PRO} Tank Number	Date	Time	Hydrometer Readings (Calibrated for 60°F)	Sample Temperature (°F)	Corrected Specific Gravity	Calculated Percent Oil	Within Acceptable Range ⁽¹⁾	Comments
1	5/29/2020	13:25	0.985	69.6	0.986	23.5%	YES	Sampled after 363 gallons of EOS _{PRO} from tank 1 were injected.
1	5/29/2020	14:40	0.987	69.0	0.988	20.3%	YES	Sampled after 1,337 gallons of EOS _{PRO} from tank 1 were injected.
1	5/29/2020	15:45	0.987	69.4	0.988	20.3%	YES	Sampled after 2,089 gallons of EOS _{PRO} from tank 1 were injected.
2	5/30/2020	14:15	0.987	67.2	0.988	21.8%	YES	Sampled after 344 gallons of EOS _{PRO} from tank 2 were injected.
2	5/30/2020	15:25	0.982	66.2	0.983	29.6%	NO	Sampled after 1,321 gallons of EOS _{PRO} from tank 2 were injected. Reduced
2	5/30/2020	16:30	0.987	67.2	0.988	21.8%	YES	Sampled after 2,011 gallons of EOS _{PRO} from tank 2 were injected.
2	5/30/2020	18:00	0.989	66.2	0.990	18.7%	YES	Sampled after 4,089 gallons of EOS _{PRO} from tank 2 were injected.
2	5/31/2020	10:00	1.000	69.0	1.001	1.4%	NO	Sampled after 4,196 gallons of EOS _{PRO} from tank 2 were injected, reflects
3	5/31/2020	11:15	0.990	65.6	0.990	18.7%	YES	Sampled after 182 gallons of EOS _{PRO} from tank 3 were injected.
3	5/31/2020	13:00	0.988	67.0	0.988	21.8%	YES	Sampled after 728 gallons of EOS _{PRO} from tank 3 were injected.
3	5/31/2020	16:45	0.988	66.8	0.988	21.8%	YES	Sampled after 2,440 gallons of EOS _{PRO} from tank 3 were injected.
4	6/1/2020	10:45	0.995	64.6	0.995	10.8%	YES	Sampled after 78 gallons of EOS _{PRO} from tank 4 were injected.
4	6/1/2020	11:30	0.994	65.0	0.994	12.4%	YES	Sampled after 145 gallons of EOS _{PRO} from tank 4 were injected.
4	6/1/2020	12:55	0.995	65.2	0.995	10.8%	YES	Sampled after 310 gallons of EOS _{PRO} from tank 4 were injected.
4	6/1/2020	15:15	0.987	73.2	0.988	21.8%	YES	Sampled after 593 gallons of EOS _{PRO} from tank 4 were injected.
4	6/1/2020	16:30	0.994	64.4	0.994	12.4%	YES	Sampled after 706 gallons of EOS _{PRO} from tank 4 were injected.
4	6/2/2020	9:35	0.995	64.0	0.995	10.8%	YES	Sampled after 1,875 gallons of EOS _{PRO} from tank 4 were injected.
4	6/2/2020	11:50	0.995	66.2	0.995	10.8%	YES	Sampled after 2,463 gallons of EOS _{PRO} from tank 4 were injected.
4	6/2/2020	16:50	0.995	64.0	0.995	10.8%	YES	Sampled after 3,387 gallons of EOS _{PRO} from tank 4 were injected.

Notes:

1. The acceptable range of specific gravity measurements was determined to be 0.986 to 0.994 for EOS_{PRO} Tank 1 and 0.988 to 0.996 for EOS_{PRO} tank 2, tank 3 and tank 4. This was determined by taking +/- 10% of the difference between the pure EOS_{PRO} with amendments solution and the pure extracted groundwater (equivalent to 0.004) and then adding and subtracting that value with the specific gravity of the 1:4 standard for each tank (shown in Table 6).
