KERR-MCGEE CHEMICAL LLC
POST OFFICE BOX 55 - HENDERSON, NEVADA 89009

August 27, 2001

Mr. Todd Croft
Nevada Division of Environmental Protection
555 E. Washington, Suite 4300
Las Vegas, NV 89101

NDEP Las Vegas Office
TREX-010827

Dear Mr. Croft:

Subject: Perchlorate Remediation Project – Seep Area Groundwater Capture

Kerr-McGee Chemical LLC (Kerr-McGee) has considered your correspondence of May 11, 2001, requesting that Kerr-McGee install multiple groundwater recovery wells in the area near the Seep in order to pump approximately 400 gpm of perchlorate-containing groundwater.

Based upon the results of our hydrogeological study, including but not limited to geologic and hydrologic mapping, drilling and sampling, computer (MODFLOW) groundwater modeling, recovery well construction, well pumping tests and engineering considerations, Kerr-McGee has determined that it can pump a total of about 350 gpm from up to four recovery wells. As communicated in earlier correspondence, Kerr-McGee is agreeable to utilizing water from these wells to reconstitute the GW-11 pond contents prior to treatment and discharge.

Perchlorate concentrations in the groundwater sampled averaged higher than Seep concentrations (140 ppm versus about 85 for the Seep). Accordingly, recovering 350 gpm of groundwater will result in capture of more perchlorate than would 400 gpm of Seep water.

Tabulations and graphs of drawdown and recovery data from each of the four recovery wells are found in the attached appendix, which should satisfy the EPA request for "raw data." Specific hydrogeologic and engineering realities that led to the 350 gpm conclusion are as follows:

(A) HYDROGEOLOGY

Mapping, stratigraphic drilling, sampling and literature study show that the area near the Seep, also referred to as the "Swamp" is in the distal-facies of an alluvial fan deposit. As such, the lithology is divided between volumetrically-large muddy sand units deposited between much narrower gravelly braided stream deposits. The transmissivities of the channel deposits are 1-2 orders of magnitude larger than in the much more extensive interchannel areas.

In the Swamp area, the more transmissive main channel deposit is 100-150 feet wide, much narrower than was originally mapped. Kerr-McGee has drilled several additional potential recovery wells in the Swamp

area but had to abandon them because they were outside of the main channel and groundwater yields were so poor. The present four-well well field is an optimal configuration based on all of this drilling. The location of the wells is shown on Figure 1.

(B) PUMP TESTS

Even within the main channel deposit, geological complexity is extreme. The main channel itself is composed of multiple stacked fining-upward sequences, which may or may not communicate with each other. This is readily apparent in the pump test results from PC-99R2 and PC-99R3, in the center of the well field. PC-99R2, a 6-inch well with 40-feet of screen, is 4.5 feet south of PC-99R3, an 8-inch well also with 40 feet of screen. PC-99R2 can sustain pumping of about 110 gpm whereas the bigger diameter well, PC-99R3, can only sustain pumping of about 40 gpm. Both of these wells are planned to be pumped together to yield a total of about 150 gpm.

Well PC-116R, 105 feet northeast of the PC-99R2/R3 pair, is the best yielding well in the well field. Alone, this well can probably pump about 150 gpm.

Well PC-115R, 112 feet west of the PC-99R2/R3 pair, is in a low transmissivity zone on the western flank of the main channel and as such will only be able to pump about 50 gpm.

(C) MODFLOW GROUNDWATER MODEL

It was originally thought that the MODFLOW groundwater modeling study would be able to predict the extent of drawdown cones for the pumping wells in the Swamp area and predict the fate of the Seep stream flow. Initial modeling, assuming a relatively homogeneous aquifer, indicated that pumping 350-400 gpm of groundwater would likely dry up the Seep. However, as drilling and pump testing progressed, the complexity of the local geology became more evident. The result of this increased complexity is that it is unlikely that the groundwater model is reliable in the area of the Swamp and the Seep.

Whether pumping groundwater in the area will dry up the Seep will not be resolved until pumping of the 35 million gallons of groundwater to the on-site Kerr-McGee pond is initiated later this year.

(D) OTHER CONSIDERATIONS

The Seep stream is currently flowing at about 200 gpm with a perchlorate concentration of about 85 ppm, equaling about 205 pounds of recovered perchlorate per day.

The four swamp wells, pumping at about 350 gpm, would contain a weighted average of perchlorate of about 140 ppm, equaling about 590 pounds per day.

Todd Croft
August 27, 2001
Page 3

Therefore the 4-well groundwater recovery well field at the Swamp will recover almost three times the perchlorate that the temporary IX plant does now and, even at higher Seep flows, the four groundwater wells are adequate to significantly increase the amount of perchlorate recovered.

Kerr-McGee is committed to act responsibly and cooperate fully with local, state, and federal officials in determining appropriate remedial actions. Please feel free to contact me at (702) 651-2200 if you have any questions related to this information.

Sincerely,

Susan Crowley

Step Discharge Test Drawdown and Recovery Data For Swamp Well PC-116R**Henderson, Nevada****Test Date: July 27, 2001**

Pre-test Water Level: 2.27 feet below ground surface

Pumping Rates: 30, 66 and 102 gpm

Date	Time	Elapsed Time (minutes)	Drawdown (feet)	Depth to Water (feet)	Pumping Rate (gpm)	Remarks

Step Discharge Test Drawdown and Recovery Data For Swamp Well PC-99R2

Henderson, Nevada

Test Date: June 25-26, 2001

Pre-test Water Level: 1.73 feet below ground surface

Pumping Rates: 15, 53 and 83 gpm

Date	Time	Elapsed Time (minutes)	Drawdown (feet)	Depth to Water (feet)	Pumping Rate (gpm)	Remarks

Step Discharge Test Drawdown and Recovery Data For Swamp Well PC-99R3R**Henderson, Nevada****Test Date: July 23, 2001**

Pre-test Water Level: 1.56 feet below ground surface

Pumping Rates: 18.5, 48.5 and 89 gpm

Date	Time	Elapsed Time (minutes)	Drawdown (feet)	Depth to Water (feet)	Pumping Rate (gpm)	Remarks

Constant Discharge Test Drawdown and Recovery Data For Swamp Well PC-99R2

Henderson, Nevada

Test Date: August 9-11, 2001

Pre-test Water Level: 1.35 feet below ground surface

Pumping Rate: 126 gpm

Constant Discharge Test Drawdown and Recovery Data For Swamp Well PC-99R3
Henderson, Nevada
Test Date: August 9-11, 2001

Pre-test Water Level: 1.24 feet below ground surface
 Pumping Rate: 63 gpm

Date	Time	Elapsed Time (minutes)	Drawdown (feet)	Depth to Water (feet)	Pumping Rate (gpm)	Remarks
