

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

Name of Facility:	Chromium and Perchlorate Groundwater Remediation Unit
Goal of Closure:	<ul style="list-style-type: none"> • Continuation of current use – regulatory closure not presently requested.
Site Investigation Area:	<ul style="list-style-type: none"> • Size: Approximately 1,470 feet by 510 feet (17.2 acres) [Ref. 1]. • Location: South of Warm Springs Road. • Current Status/Features: LOU 32 is currently active and includes the chromium and perchlorate groundwater remediation units and includes the GW-11 Pond and the area to the southeast of the GW-11 Pond (not originally within the LOU 32 boundary). LOU 32 also includes portions of LOUs 1, 55, and 58.
Description:	<ul style="list-style-type: none"> • The Chromium and Perchlorate Groundwater Remediation Unit intercepts and treats a plume of hexavalent chromium and perchlorate-impacted shallow groundwater from beneath the Site [Ref. 5]. • LOU 32 consists of a groundwater barrier wall, interceptor wells, two recharge trenches, the chromium treatment system, groundwater monitoring wells, associated piping, and (since 1998) a perchlorate treatment system and the GW-11 Pond [Ref. 1]. <ul style="list-style-type: none"> – <u>Interceptor wells</u>: Initially the system was made up of 11 groundwater interceptor wells (I-AR through I-K) in a 900-foot-long configuration. <ul style="list-style-type: none"> ▪ Fifteen additional groundwater wells (I-L through I-Z) were progressively installed in 1993, 1998, 1999, 2000, and 2003 [Ref. 4]. ▪ A twenty-seventh interceptor well (I-AA) was installed in December 2007 [ENSR, report in-preparation]. – <u>Groundwater barrier wall</u>: The barrier wall is approximately 1,600 feet in length, three feet thick, 60 feet deep, and consists of a slurry of bentonite clay mixed with the native soil removed from the trench excavation. This includes about 30 feet of alluvium and 30 feet of Muddy Creek formation materials [Ref. 8].

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- Groundwater Recharge Trenches: The initial treatment system consisted of two recharge trenches constructed in 1985 or 1986. They were approximately three feet wide, five feet deep, and several hundred feet long [Ref. 8].
 - In 1994, the trench walls became plugged with an iron precipitate material causing brownish red water to flow on to the ground surface [Ref. 8].
 - The trenches were replaced in 1994 and the iron material and gravel were disposed of as non-hazardous waste [Ref. 8].
 - Two east-west trending replacement recharge trenches, 75 feet apart and approximately 250 feet north of the interceptor well line, were constructed in 1994. The replacement trenches are approximately 800-feet and 1,100 feet long, respectively [Ref. 8].
- Groundwater monitoring wells: Wells upgradient, downgradient, and in the immediate vicinity of the barrier wall and interceptor well system are used to evaluate the impact of the interceptor wells and the recharge system [Ref. 1].
- Chromium Treatment Plant: Groundwater from the interceptor wells flow to the chromium treatment plant, where an electrolytic reduction process is used to reduce hexavalent chromium to trivalent chromium. This process generates an iron oxide sludge that contains heavy metals [Ref. 1].
- GW-11 Pond: This lined pond is approximately 11-acres and is used as a temporary holding pond. Treated groundwater from the chromium treatment unit flows into the GW-11 Pond prior to entering the perchlorate treatment system [Ref. 2].
- Perchlorate Treatment Plant: Water from the GW-11 Pond flows into the Perchlorate Treatment Plant - a biological Fluidized-Bed Reactor (FBR) designed to remove perchlorate from the recovered groundwater [Ref. 2]. The system is capable of treating 825 gallons per minute (gpm) [Ref. 2].
- Associated piping: Piping located with the LOU 32 boundary.

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- Sodium dichromate (hexavalent chromium) was used in the production of sodium chlorate and sodium perchlorate in Units 4 and 5 [Ref. 5]. A more detailed discussion is provided in the LOU 43 data package (Unit 4 Basement) summary.
- Groundwater remediation for chromium began in September 1987 in response to the September 1986 NDEP Consent Order [Ref 5].
- Chromium treatment capacity ranges from 65 to 100 gpm [Ref. 5, 6].
- Waste product (iron oxide sludge and filter cake) generated at the chromium treatment facility has been characterized as non-hazardous and is placed in a drum and transported off-site for disposal [Ref. 5].
- The concrete pad (approximately 60 feet by 20 feet) on which the chromium treatment unit is located, slopes gently to the north toward a sump along the north berm; water in the sump is recycled back into the treatment system [Ref. 5].
- In 1991, no cracks, cold joints, or other types of deterioration of the concrete containment pad and berms were observed [Ref. 5].
- Prior to 1998, groundwater was pumped from the interceptor wells, treated to remove hexavalent chromium, and injected into the recharge trenches [Ref. 7].
- In 1998, the GW-11 pond was constructed as part of the perchlorate treatment system [Ref. 7], in accordance with the Administrative Order on Consent for remediation of perchlorate impacted groundwater in the Henderson area, October 8, 2001 (as amended) [Ref. 3].
- Since December 30, 1998, effluent from the chromium treatment system has been re-directed from the recharge trenches to the GW-11 pond for temporary containment. An interim ion-exchange perchlorate treatment system was constructed on the Site and operated from 2002 to 2004. The treated groundwater was then discharged to the Las Vegas Wash under an NPDES permit [Ref. 8].
- In 2001, the groundwater barrier wall was installed (Ref. 8).

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- In 2004, construction was completed on the permanent on-site FBR perchlorate treatment system. Elements of the FBR system are housed within the New D-1 Building (LOU 58) [Ref. 2]. The interim ion-exchange system was taken off-line and water from the GW-11 pond currently flows into the FBR system. After perchlorate has been removed, the treated groundwater is discharged to Las Vegas Wash under the NPDES permit.
- Solid waste from the FBR perchlorate treatment system consists of filtered non-hazardous solid biomass. About one ton per day dry weight basis of solid waste is generated and is disposed of off-site at a landfill [Ref. 6].

Process Waste Streams Associated with LOU 32	Known or Potential Constituents Associated with LOU 32
Extracted Groundwater (pre-treatment)	<ul style="list-style-type: none"> • Metals • Hexavalent chromium • Perchlorate • Wet chemistry analytes
Metal oxides from the chromium treatment unit [Ref. 9].	<ul style="list-style-type: none"> • Iron oxide • Total chromium
Filter cake from the chromium treatment unit [Ref. 9].	<ul style="list-style-type: none"> • Metals (Iron and total chromium)
Filtered non-hazardous solid biomass containing negligible amounts of perchlorate from the perchlorate treatment unit [Ref. 9]	<ul style="list-style-type: none"> • Perchlorate

Overlapping or Adjacent LOUs: The following LOUs overlap or are adjacent to LOU 32:

Overlapping LOUs

- LOU 1 (Trade Effluent Settling Ponds) – Overlaps the northern half of LOU 32.
- LOU 58 (AP Plant Area New D-1 Building Washdown) – Overlaps the southwestern portion of LOU 32.
- LOU 55 (Area Affected by July 1990 Fire) – The northern portion of LOU 55 overlaps the southern portion of LOU 32.

Adjacent LOUs

- LOU 2 (Open Area Due South of “Trade Effluent Disposal Ponds”) – located southwest (upgradient) of LOU 32.

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- LOU 56 (AP Plant Area Old Building D-1- Washdown) – located south (upgradient) of LOU 32.

With the exception of LOUs 1 and 55 (see discussion below), known or potential chemical classes that are associated with LOUs 2, 56, and 58 are consistent with those listed for LOU 32; therefore, no additional chemical classes have been added to the analytical plan for LOU 32. For detailed information on the LOUs listed above, please refer to the specific LOU data package.

LOUs Potentially Affecting Soils in LOU 32:

- LOU 1: The former Trade Effluent Settling Ponds were located mostly within the footprint of LOU 32. These unlined ponds received wastes from the Acid Drain System (LOU 60); therefore soils in LOU 32 may potentially be impacted by LOU 1. As a result, the analytical plan for samples collected from LOU 32 will include analyses for VOCs, SVOCs, TPH, and OCPs.
- LOUs 56 and 58: Used for dry material handling, mixing, and blending of ammonium perchlorate (AP). The small amounts of AP that fell to the floor were swept up and the building was washed down on an infrequent basis. Wash-water could have potentially drained from LOU 58, potentially affecting the soils in LOU 32. Known or potential chemical classes associated with LOUs 56 and 58 are included as part of the Phase B Analytical Plan for LOU 32.
- LOU 55: This area was used to store 55-gallon drums containing AP. A fire occurred on July 18, 1990 and soil surrounding the pad was impacted with AP and decomposition products as the fire-fighting wash water drained off the pad. As a result, the analytical plan for samples collected from LOU 32 will include analyses for SVOCs.

For detailed information on these LOUs, please refer to the specific LOU data package.

Known or Potential Chemical Classes:

- Metals
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs (associated with LOU 1)
- SVOCs (associated with LOU 1 and 55)
- TPH (associated with LOU 1)
- Organochlorine pesticides (associated with LOU 1)

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

Known or Potential Release Mechanisms:

- Potential impacts to surrounding soils from surface releases.
- Potential releases to surrounding soils from conveyance and process piping.
- Small quantities of iron oxide filter cake were observed on the soil surface adjacent to the south side of the pad [Ref. 5].
- A small quantity of iron oxide sludge was observed outside the bermed area on the soil north of the treatment unit. [Ref. 5].
- Surface releases associated with overflow of the recharge trenches. In 1994, the groundwater recharge trenches overflowed resulting in surface releases of groundwater [Ref. 8]. The volume of water flowing onto the ground as surface runoff is not known, but the groundwater contained perchlorate. In 1994, the state-of-the-art laboratory instrumentation was not sensitive enough to detect the perchlorate levels in the water.

Results of Historical Sampling:

- Iron oxide sludge and filter cake contains chromium; however, concentrations are below EP toxicity and TCLP limit levels [Ref. 5].
- Several downgradient and upgradient monitoring wells are tested for hexavalent chromium and perchlorate as part of periodic or routine groundwater monitoring program. Analytical results are summarized: LOU 32 Table 6 [Ref. 3].

Did Historical Samples Address Potential Release?

- No

Summary of Phase A SAI:

Soil:

- Borings SA19 and SA20 are located south (upgradient) of LOU 32 but were not specifically sampled to evaluate this LOU [Ref. 2].

Groundwater:

- Well M-55 is located within LOU 32; however, this well was not sampled specifically to evaluate LOU 32 [Ref. 2].
- Well I-AR are located south (upgradient) of LOU 32 but were not sampled specifically to evaluate this LOU [Ref. 2].

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

Chemical classes detected in Phase A soil borings SA20 and SA19:

- Metals
- Perchlorate
- Wet chemistry analytes
- VOCs
- Organochlorine pesticides (SA20 only)
- Dioxins
- Radionuclides
- Asbestos (SA19 only)

As a result of the Phase A data, the Phase B analytical plan for samples collected from LOU 32 will be expanded to include analyses for dioxins/furans, radionuclides, and asbestos.

- Analytical results for soil and groundwater from the Phase A sampling event are summarized: LOU 32 Tables 1 through 5 and 7 through 21 (see attached) [Ref. 2].

Are Phase A Sample Locations in “Worst Case” Areas?

- No

Is Phase B Investigation Recommended?

- Yes

Proposed Phase B Soil Investigation/Rationale:

- The Phase B investigation of LOU 32 consists of collecting soil samples from 28 locations.
 - Fourteen (14) soil boring locations will be placed within the boundaries of LOU 32:
 - Five (5) soil boring locations will be drilled south (upgradient) of LOU 32.
 - Nine (9) soil boring locations will be drilled north (downgradient) or cross-gradient of LOU 32.
 - All 28 borings along with the analytical program to evaluate soil samples from LOU 32 are listed on **Table A – Soil Sampling and Analytical Plan for LOU 32.**
- Soil sample locations consist of both judgmental and randomly-placed locations.

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- Judgmental sample locations:
 - Designed to evaluate soil for known or potential chemical classes associated with LOU 32, based on the known process waste streams.
 - Ten (10) of the 28 sample locations are judgmental locations and include soil borings SA74, SA75, SA76, SA79, SA134, SA189, SA82, SA201, SA202, and SA88.
- Random sample locations:
 - Designed to assess whether unknown constituents associated with LOU 32 are present.
 - Eighteen (18) of the 28 sample locations are randomly-placed locations and include soil borings RSAL5, RSAK5, RSAK6, RSAK7, RSAJ7, RSAJ6, RSAJ5, RSAI3, RSAL6 (located in Area II), RSAL4, RSAK4, RSAK8, RSAJ8, RSAI7, RSAI5, RSAI4, RSAJ3, RSAK3

Proposed Phase B Constituents List for Soils:

Both Judgmental and Random sample locations will be analyzed for the following constituents:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH DRO/ORO
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

Proposed Phase B Groundwater Investigation/Rationale:

- The Phase B groundwater investigation of LOU 32 consists of collecting groundwater samples from 17 locations to evaluate local groundwater conditions and as part of the Site-wide evaluation of constituent trends in groundwater.
 - Eight (8) wells will be sampled within the boundaries of LOU 32. These wells are: I-B, M-69, M-79, M-83, M-84, M-55, M-78, M-61.
 - Three (3) wells south (upgradient) of LOU 32 will be sampled. These wells are M-65, M-67, and I-AR (located in Area II).

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- Six (6) wells north (downgradient or cross-gradient) of LOU 32 and will be sampled. These wells are: M-88, M-98, M-99, M-100, M-101, and MW-16.
- All 17 wells along with the analytical program to evaluate groundwater samples associated with LOU 32 are listed on **Table B – Groundwater Sampling and Analytical Plan for LOU 32.**

Proposed Phase B Constituents List for Groundwater:

Groundwater samples will be analyzed for the following analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Radionuclides

Proposed Phase B Soil Gas Investigation/Rationale:

Soil gas samples will be collected from eight (8) locations to evaluate area conditions for the presence of vapor-phase VOCs in the vadose zone.

- SG21 will be located independently to assess indoor air risk to Perchlorate Treatment Building.
- SG23 will be located adjacent to well M-55 to evaluate VOCs from a groundwater source as indicated by Phase A Well M55 (690 µg/L Chloroform/12+ µg/L TCE).
- SG24 is located to evaluate VOCs from a groundwater source as a companion for Phase B well M-99; also to provide area-wide coverage.
- SG52 is located to evaluate VOCs (270 µg/L Chlorobenzene; 93 µg/L Benzene) from a groundwater source as a companion for Phase B well MW-16.
- SG90 is located to evaluate VOCs from a groundwater source as indicated by Phase A well M-98 (810J µg/L Chloroform).
- SG91 is located to evaluate VOCs from a groundwater source as indicated by Phase A well M-100 (36 µg/L Chloroform).
- SG92 is located to provide area-wide coverage and to evaluate potential VOCs in groundwater; also as a companion to soil boring RSAJ5.

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

- SG93 is located to provide area-wide coverage as a companion to well M-88.

Details of the soil gas sampling program are contained in the NDEP-approved (March 26, 2008) Soil Gas Survey Work Plan, Tronox LLC, Henderson, Nevada, dated March 20, 2008.

**Proposed Phase B Constituents
List for Soil Gas:**

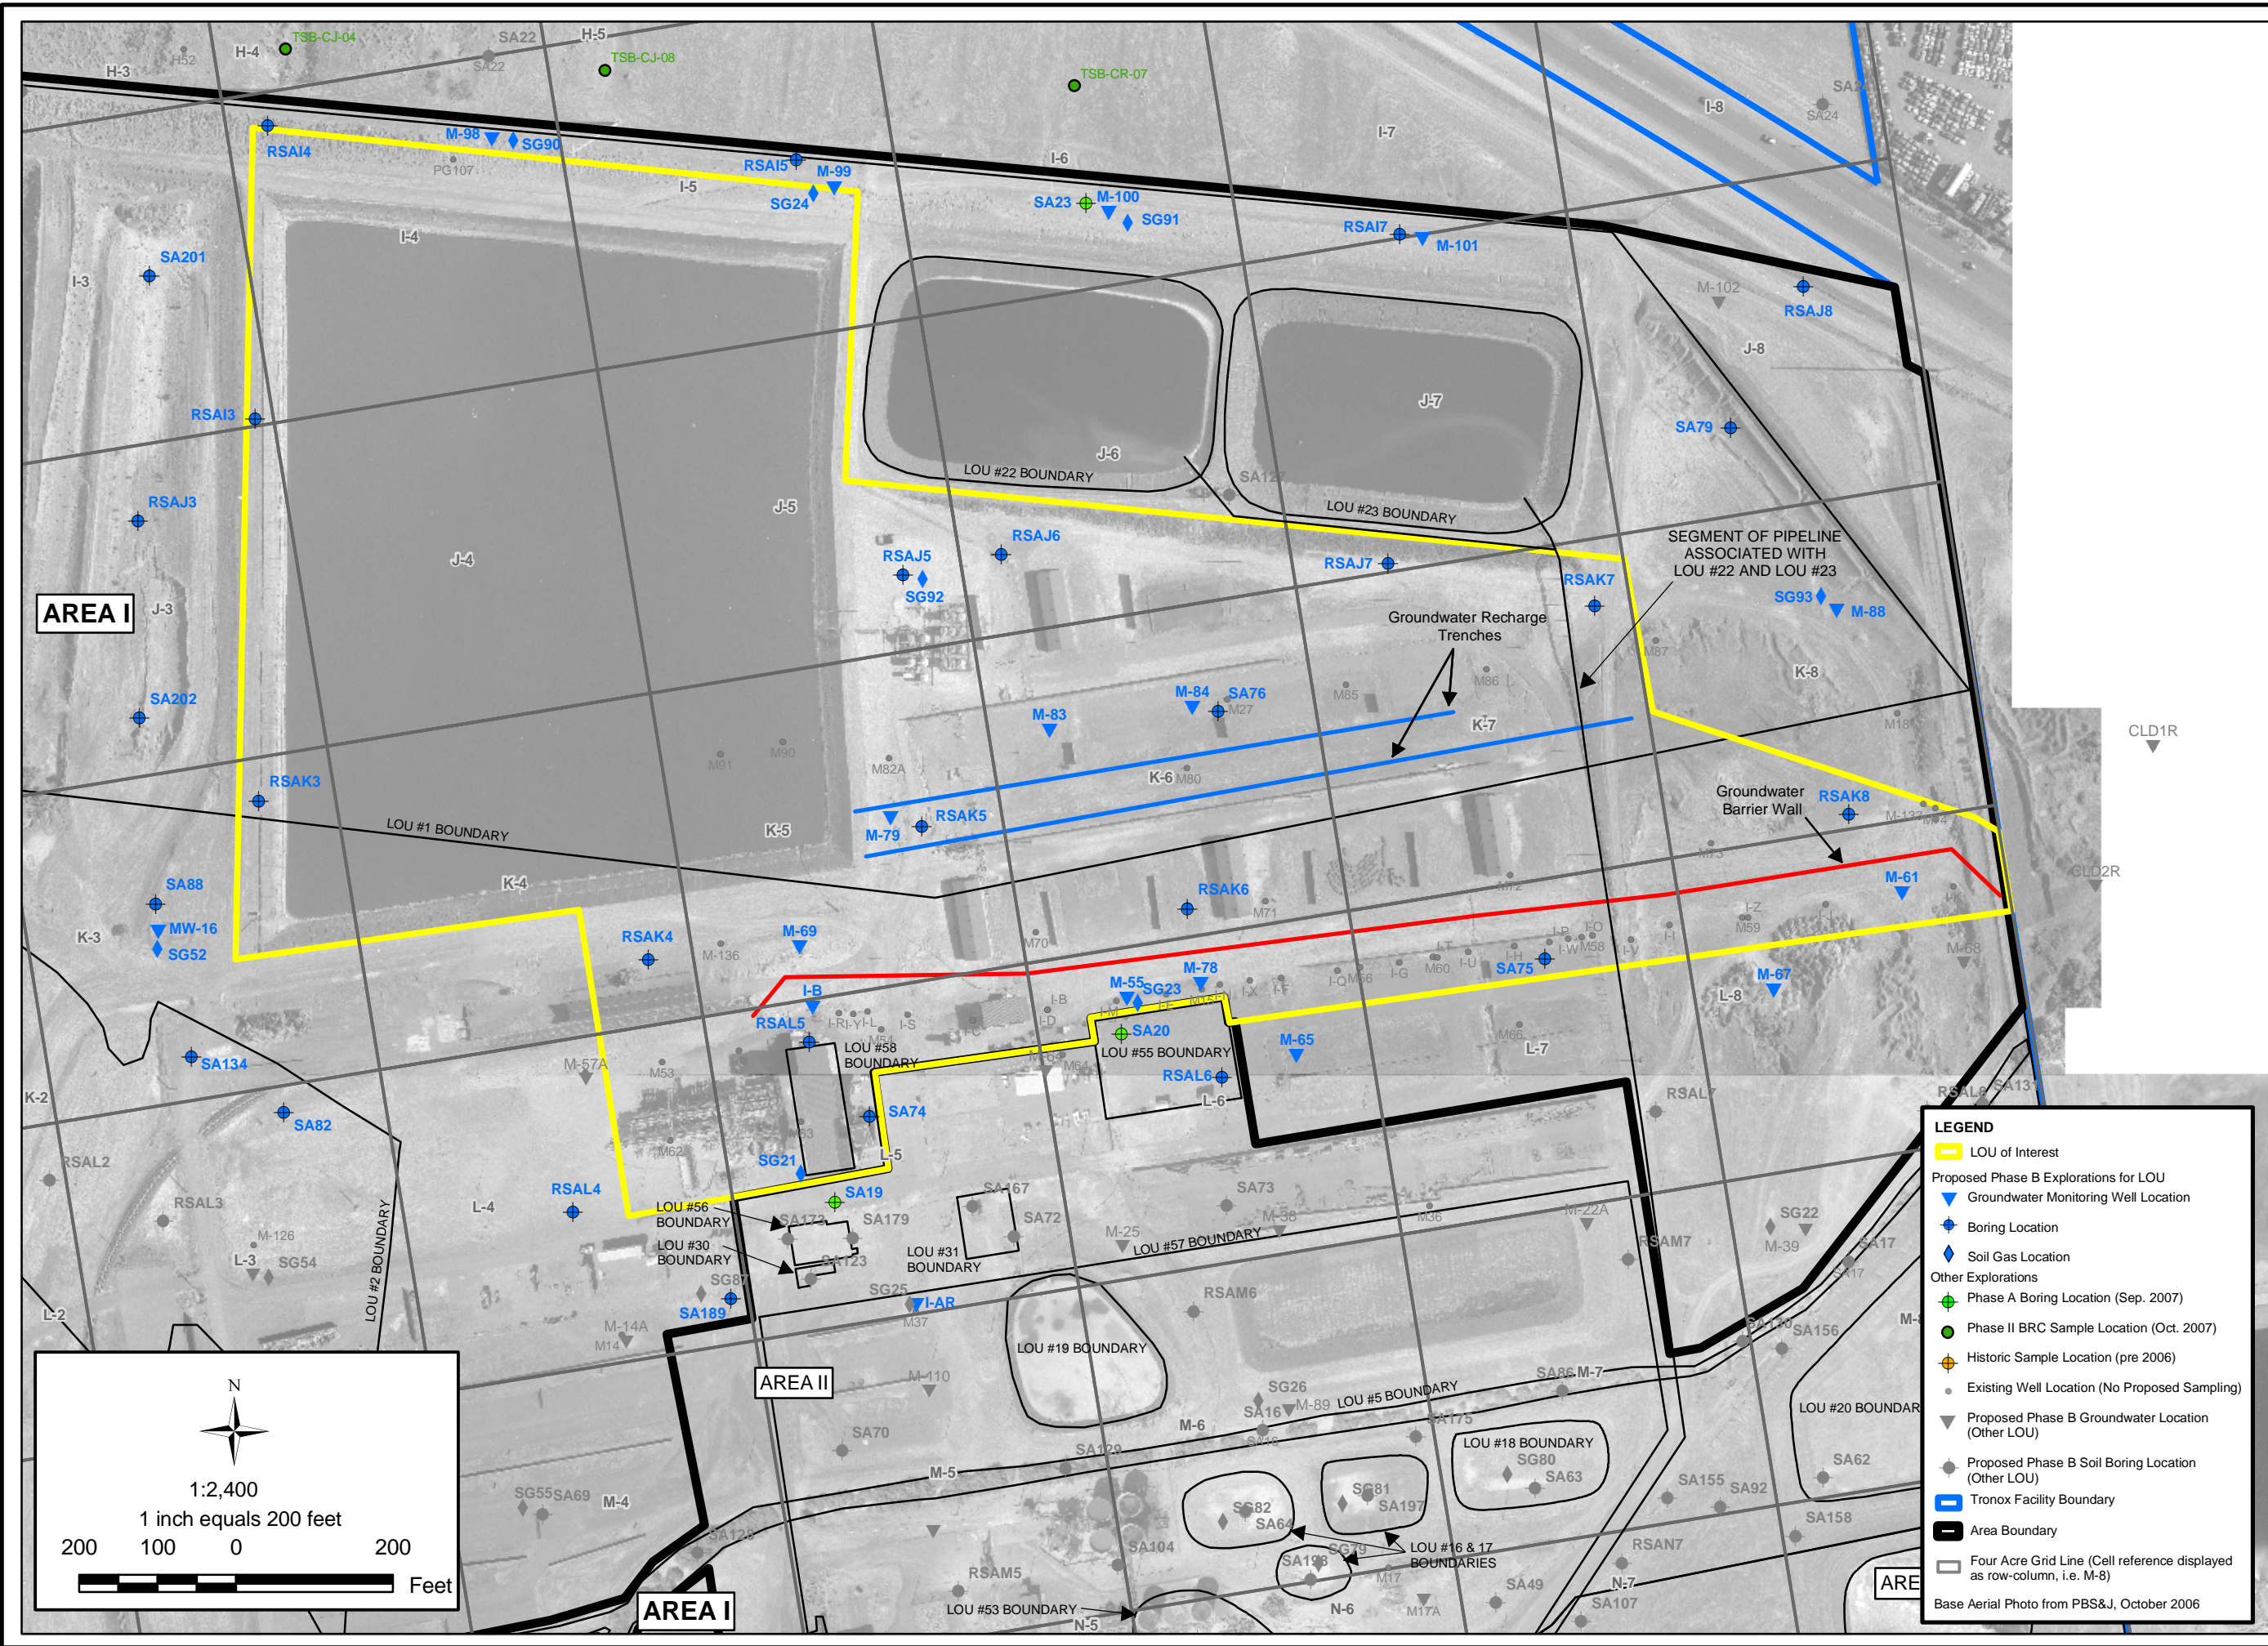

- VOCs (EPA TO-15)

Number of Borings:		30																		
Number of Samples:					116	116	116	108	0	112	116	28	108	116	32	0	32			

Notes:

- X Sample will be collected and analyzed.
- No sample collected under Phase B sampling program.
- TPH-DRO/ORO Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
- 1. Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
- 2. Includes wet chemistry parameters listed on Table 1 of the Phase B Source Area Work Plan.
- 3. Organochlorine Pesticides (includes analysis for hexachlorobenzene).
- 4. Semi-volatile Organic Compounds
- 5. Radionuclides consists of alpha spec reporting for Thorium-230/232, Uranium 234/235, Uranium-238, and beta spec for Radium-226/228 (per NDEP).
- 6. Dioxins/furans: 90% will be tested by immunoassay, 10% analyzed by HRGC/HRMS in the laboratory.

Table B
Groundwater Sampling and Analysis Plan for LOU 32
Phase B Source Area Investigation Area I Work Plan
Tronox Facility - Henderson, Nevada

Grid Location	Location Area	Monitoring Well No.	Screen Interval (ft bgs)	Well Sampled for Phase A? (y/n)	Perchlorate (EPA 314.0)	Hex Cr (EPA 7199)	Metals	VOCs1 (EPA 8260)	Wet Chemistry2	OCPs3 (EPA 8081A)	SVOCs4 (EPA 8270C)	Radio-nuclides5	Rationale
Wells are organized by grid location as shown on Plate A - Starting point is on the northwestern-most grid in Area 1 (I-4) and ending with the southeastern-most grid covering Area I (L-5).													
I-4	1	M-98	19 - 29	yes	X	X	X	X	X	X	X	X	Located to evaluate LOU 1 and for general site coverage.
I-5	1	M-99	16 - 31	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general site coverage.
I-6	1	M-100	19 - 29	yes	X	X	X	X	X	X	X	X	Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general site coverage.
I-7	1	M-101	17 - 27	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general site coverage.
K-3	1	MW-16	25 - 40	no	X	X	X	X	X	X	X	X	New monitoring well to evaluate SRCs from in upper Muddy Creek from offsite sources from west.
K-5	1	M-69	19.9 - 39.3	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32 and to evaluate the western end of the Groundwater Barrier Wall.
K-5	1	M-79	10.8 - 35.4	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32 and the western end of the Groundwater Injection Trenches; and for general site coverage.
K-6	1	M-83	10.8 - 40.3	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32 and the Groundwater Injection Trench area; as an upgradient stepout for LOU 1, LOUs 22 and 23; and for general site coverage.
K-6	1	M-84	11.8 - 34.1	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32 and the Groundwater Injection Trench area; as an upgradient stepout for LOU 1 and LOUs 22 and 23; and for general site coverage.
K-8	1	M-88	7.3 - 36.8	no	X	X	X	X	X	X	X	X	Located to serve as an upgradient stepout for LOU 1; as a downgradient stepout for LOU 32; to evaluate possible offsite sources to the east; and for general site coverage.
L-6	1	M-55	14.6 - 44.6	yes	X	X	X	X	X	X	X	X	Located just upgradient of the groundwater barrier wall; to evaluate LOU 32; to serve as a downgradient stepout for LOUs 19, 31, and 55 and for general site coverage.
L-6	1	M-65	14.4 - 39	no	X	X	X	X	X	X	X	X	Located to serve as an upgradient stepout for LOU 32; as a downgradient stepout for LOU 57; and for general site coverage.
L-6	1	M-78	21.5 - 41.5	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32; as a downgradient stepout for LOU 55 and for general site coverage.
L-8	1	M-61	93 - 38.8	no	X	X	X	X	X	X	X	X	Located to evaluate LOU 32 and the eastern end of the Groundwater Barrier Wall.
L-8	1	M-67	7.8 - 37.8	no	X	X	X	X	X	X	X	X	Located to serve as an upgradient stepout for LOU32, and for general site coverage.
L-5	1	I-B	17.8 - 42.5	no	X	X	X	X	X	X	X	X	Located as a downgradient stepout for LOU 56 and LOU 58; as an upgradient stepout for LOU 57, and for general site coverage.
Number of Field Samples:					16	16	16	16	16	16	16	16	

Notes:

- X Sample will be collected and analyzed.
- 1 Volatile organic compounds- samples for VOC analysis will be preserved in the field using sodium bisulfate(or DI water) and methanol preservatives per EPA method 5035
- 2 Includes wet chemistry parameters listed on table 1. of the Phase B Source Area Work Plan.
- 3 Organochlorine pesticides(includes analysis for hexachlorobenzene).
- 4 Semi-volatile organic compounds
- 5 Radionuclides consists of alpha spec reporting for Thorium-230/232, Uranium 234/235, Uranium-238, and beta spec for Radium-226/228 (per NDEP)

Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

Soil and Groundwater Characterization Data

**Summary of Available Data for LOU 32 –
Chromium and Perchlorate Groundwater Remediation Unit
Tronox Facility – Henderson, Nevada**

LOU-specific analytes identified include:

- Wet chemistry analytes
- Dioxins/furans
- Metals
- Organochlorine pesticides
- Perchlorate
- Radionuclides
- SVOCs
- TPH
- VOCs
- Asbestos

The tables in **BOLD** below present Phase A data associated with these LOU specific analytes listed above.

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted
 - (j) Secondary Drinking Water Regulation value.
 - (c) Equal to the USEPA Region 9 Preliminary Remediation Goals (PRGs) for tapwater (October, 2004).
 - (p) The national primary drinking water regulations (b) lists a treatment technology action level of 1.3 mg/l as the MCL for Copper. Therefore, the secondary value is not used.
 - (u) See footnote (b). Treatment technology action level.
 - (a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

Notes:

1. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.

< = less than the reporting limit

Blank cell or --- = no data and or no qualifier

Qual = data qualifiers applied by laboratory or during data validation

TDS = Total Dissolved Solids

mg/l = milligram per liter

(a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

(m) Equal to the provisional action level derived by NDEP as referenced in "Defining a Perchlorate Drinking Water Standard". NDEP Bureau of Corrective Action. URL [http://ndep.nv.gov/bca/perchlorate02_05.htm].

(j) Secondary Drinking Water Regulation value.

Laboratory Qualifiers:

d = the sample was diluted

u = the analyte was not detected above the sample reporting limit

ud = the sample was diluted and was not detected above the sample reporting limit

Validation Qualifiers:

J = the result is an estimated quantity

J- = the result is an estimated quantity and the result may be biased low

U = the analyte was analyzed for, but was not detected above the sample reporting limit

UJ = the sample was not detected above the sample reporting limit and the reporting limit is approximate

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
 2. U.S. EPA, Region 9, Preliminary Remediation Goals (PRGs) for industrial soil (October, 2004).
- (mm) PRG is based on the soil saturation limit. Therefore, the risk-based value provided in the electronic backup to the PRG table was used.
- (gg) Value for 1,3-dichloropropene used as surrogate for 1,1-dichloropropene, cis-1,3-dichloropropene and trans-1,3-dichloropropene based on structural similarities.
- (hh) Value for 1,2,4-trichlorobenzene used as surrogate for 1,2,3-trichlorobenzene based on structural similarities.
- (yy) PRG table (c) lists both cancer and non-cancer endpoint-based values. The cancer endpoint-based values were selected, as the cancer endpoint-based values are lower than the noncancer endpoint-based values.
- (ii) Value for 1,2-dichloropropane used as surrogate for 2,2-dichloropropane based on structural similarities.
- (nn) Value for methyl isobutyl ketone used as surrogate for 2-hexanone based on structural similarities.
- (ww) Value for 2-chlorotoluene used as surrogate for 4-chlorotoluene based on structural similarities.
- (qq) Value for bromodichloromethane used as surrogate for bromochloromethane due to structural similarities.
- (xx) Value for methylene bromide used as surrogate for dibromomethane based on structural similarities.
- (kk) Value for methyl tertbutyl ether (MTBE) used as surrogate for ethyl-tert-butyl ether (ETBE) based on structural similarities.
- (zz) Isopropyl benzene is listed as cumene (isopropylbenzene) in the PRG table.

Notes for Phase A Data Tables

Groundwater Remediation Unit
Tronox LLC, Henderson, Nevada

Blank	Not analyzed.
Bold	Bold values are constituents detected above the laboratory sample quantitation limit.
Gray	Grayed out values are non-detected values with the laboratory sample quantitation limits shown.
B	The result may be a false positive totally attributable to blank contamination.
D	Dissolved Metals.
DO	Dissolved Oxygen.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity and the result may be biased low.
J+	The result is an estimated quantity and the result may be biased high.
J+	The result is an estimated quantity and the result may be biased high.
JB	The result may be biased high partially attributable to blank contamination.
JK	The result is an estimated maximum possible concentration.
R	The result was rejected and unusable due to serious data deficiencies. The presence or absence of the analyte cannot be verified.
S	Soluble metals
T	Total Metals.
U	The analyte was analyzed for, but was not detected above the laboratory sample quantitation limit.
UJ	The analyte was not detected above the laboratory sample quantitation limit and the limit is approximate.
mg/kg	Milligrams per kilogram.
mg/L	Milligrams per liter.
ml/min	Milliliters per minute.
ng/kg	Nanogram per kilogram.
nm	Not measured.
NTUs	Nephelometric Turbidity Units.
ORP	Oxidation-reduction potential.
pCi/g	PicoCuries per gram.
2. U.S. EPA	PicoCuries per liter.
s/gPM10	Revised protocol structures per gram PM10 fraction dust.
TEF	Toxic Equivalency Factor.
TEQ	Toxic Equivalent Concentration
ug/kg	Micrograms per kilogram.
ug/L	Micrograms per liter.
umhos/cm	MicroSiemens per centimeter.
L	Sample ID suffix indicating the sample was collected using low low-flow pumping rates (100-150 ml/min).
F	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min) and field filtered.
Z	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min).
*	No analytical data is available for this sample due to a laboratory error.
(a)	Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
(b)	Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
--	PRG not established
