

**Summary of Available Data for LOU 59 in Area IV**  
**Storm Sewer System**  
Tronox Facility – Henderson, Nevada

|                                 |   |
|---------------------------------|---|
| <b>Name of LOU:</b>             | <b>Storm Sewer System in Area IV</b>  |
| <b>Goal of Closure:</b>         | <ul style="list-style-type: none"><li>Continuation of current use – regulatory closure not presently requested.</li></ul>   |
| <b>Site Investigation Area:</b> | <ul style="list-style-type: none"><li>Size: Approximately 25,000 linear feet in total.<ul style="list-style-type: none"><li>Approximately 3,800 linear feet of the Storm Sewer System is located in Area IV.</li></ul></li><li>Location: In Area IV, segments of the Storm Sewer System run north-south along 5<sup>th</sup>, 6<sup>th</sup>, and 7<sup>th</sup> Streets and run east-west in the southern portion of the Site. Additionally, in the southern portion of the Site, a north-south line connects the east-west lines near the eastern boundary.</li><li>Current Status/Features: The Storm Sewer System is currently active.</li></ul>  |
| <b>Description:</b>             | <p><u>Storm Sewer System in Area IV</u></p> <ul style="list-style-type: none"><li>The Storm Sewer System is a subsurface feature that carried storm water run-off and process effluent from the southern portion of the BMI site.</li><li>The Storm Sewer System in Area IV consists of mostly of north-south trending lines in the area of Units 1 and 2, and east-west trending lines in the southern portion of the Site near LOU 62 (State Industries Inc.).</li><li>The system provided a means to manage both storm water and industrial effluent [Ref. 7].</li><li>Branches of the Storm Sewer System in Area IV passed through and carried effluents from the State Industries Inc. Site (LOU 62), the Unit Buildings 1 and 2, and surface run-off from LOUs 41 (Unit 1 Tenant Stains), 65a through 65d (various lessees), 26 (Trash Storage Area), 25 (Process Hardware Storage Area), 27 (PCB Storage Area, 28 (Hazardous Waste Storage Area), and 4 (Hardesty Chemical Company), and some off-site facilities.</li><li>Discharges to the sanitary sewer via the acid drain system occurred on at least three occasions in 1974 to facilitate repairs to the leaking liner in one of the surface impoundments in LOU 62 [Ref. 7].</li></ul> |

## Summary of Available Data for LOU 59 in Area IV Storm Sewer System

Tronox Facility – Henderson, Nevada

- Waste from LOU 4 (Hardesty Chemical Company) was discharged to the “sewer” [Ref. 1 and 6].
  - Hardesty’s manufactured products included: synthetic hydrochloric acid (muriatic acid), monochlorobenzene, paradichloro-benzene, orthodichlorobenzene, synthetic detergents, pesticides (i.e., DDT), and soda arsenite solution [Ref. 1 and 6].
- Constituents associated with on-site processes may have entered the storm sewer system through surface run-off.
- The Storm Sewer System in Area IV discharged to an off-site location and/or to the Beta Ditch (LOU 5) through a line that runs north between the Unit 1 and Unit 2 buildings. This line discharged into the western diversion ditch of LOU 5.

A description of the Site-wide extent of the Storm Sewer System is detailed below to provide the current understanding (based the documents reviewed) of the historical and current use of the system and the process waste streams that are known to have entered or may have potentially entered the system. Phase B investigations for the segments of the Storm Sewer System in Area IV are discussed in the “Proposed Phase B Soil Investigation/Rationale” section of this LOU summary document.

- The Storm Sewer System comprises a network of concrete and clay tile storm drains (subsurface pipes), manholes (drop inlets), and outfalls (discharge points), which were installed during construction of the original BMI complex in 1941 to 1942 [Ref. 2].
- The system provided a means to manage both storm water and industrial effluent [Ref. 7].
- The Storm Sewer System was constructed of several smaller networks, each of which drained a discrete portion of the BMI complex and discharged to different outfalls [Ref. 7].
- Outfalls occurred along the Beta Ditch, tributaries to the Beta Ditch, and other drainage ditches. The storm water/effluent ultimately all merged in the Beta Ditch and was conveyed off-site to the upper and lower BMI Ponds [Ref. 7].
- From 1941 through January 1976, the Storm Sewer System conveyed storm water and process effluent from the southern portions of the Site to the Beta Ditch [Ref. 7].
- Onsite run-off from storm events historically would follow local topography, enter nearby drop inlets, and follow the storm drain to an outfall [Ref. 7].

**Summary of Available Data for LOU 59 in Area IV**  
**Storm Sewer System**  
Tronox Facility – Henderson, Nevada

- Storm Sewer System also historically conveyed effluent from the following off-site sources: U.S. Lime facility (Chemstar), Stauffer Chemical, Jones Chemical, and Timet, Inc. [Ref. 7].
- Between 1945 and 1976, process effluent, or waste water, contained classes of chemicals associated with chlorate, perchlorate, elemental boron, and leach plant processes as well as slurried sodium chlorate filter cake containing 0.05 percent by weight hexavalent chromium [Ref. 7].

1976 - Present:

- By January 1976, the Storm Sewer System was no longer used to convey process effluent or wastewater. The Kerr-McGee Chemical Company (Tronox) attained “zero discharge” status [Ref. 7].
- The Storm Sewer System only conveyed storm water and once-through non-contact cooling water to the Beta Ditch [Ref. 7].
- Currently, process wastewater and fluids are conveyed throughout the Tronox Site by a system of surface and subsurface pipelines to onsite lined surface impoundments [Ref. 7].
- Many storm drains located in, or near, process areas have been sealed or retrofitted with a protective berm to reduce the possibility that wastes, process fluids, or process area contaminated storm water runoff would accidentally enter the Storm Sewer System [Ref. 7].

| Process Waste Streams Associated with LOU 59 in Area IV  | Known or Potential Chemicals Associated with LOU 59 in Area IV   |

**Overlapping or Adjacent LOUs in Area IV:**

The following LOUs overlap or are adjacent to LOU 59:

Overlapping LOUs

- LOU 25 (Process Hardware Storage Area) – LOU 59 overlaps the western boundary of LOU 25.
- LOU 65b (Buckles Construction Company) – LOU 59 overlaps the western boundary of LOU 65b.

Adjacent LOUs

- LOU 4 (Hardesty Chemical Company) – Located between two north-south trending lines on the west and east sides of Unit 2.
- LOU 26 (Trash Storage Area) – Located to the east and west of the portion of LOU 59 that runs along 6<sup>th</sup> Street.
- LOU 28 (Hazardous Waste Storage Area) – Located west of the portion of LOU 59 that runs along 7<sup>th</sup> Street.
- LOU 36 (Former Satellite Accumulation Point, Unit 3 – Maintenance Shop) – Located east of the portion of LOU 59 that runs along 7<sup>th</sup> Street.
- LOU 41 (Unit 1 Tenant Stains) – Located east of the portion of LOU 59 that runs along 5<sup>th</sup> Street.
- LOU 62 (State Industries Inc.) – Located south of the onsite, southwestern-most portion of LOU 59.

For detailed information on these LOUs, please refer to the specific LOU data package.

**LOUs Potentially Affecting Soils in LOU 59:**

- LOUs 65b and 41: Branches of the Storm Sewer System run along the west side of Unit 1. The system potentially carried storm runoff or effluents from these LOUs. As a result, the analytical plan for samples collected from LOU 59 will include analyses for VOCs, SVOCs, and TPH.
- LOUs 4, 25, 26, 28, 36: Branches of the Storm Sewer System run along the west and east sides of Unit 2. The system potentially carried storm runoff or effluents from these LOUs. As a result, the analytical plan for samples

## Summary of Available Data for LOU 59 in Area IV Storm Sewer System

Tronox Facility – Henderson, Nevada

collected from LOU 59 will include analyses for VOCs, SVOCs, OCPs, and TPH.

- LOU 62 – State Industries Inc. Site: LOU 59 received discharges from surface impoundments at the State Industries Inc. Site (LOU 62) during repairs to leaking liners. The system also received storm water runoff from the area near the State Industries warehouse. As a result, the analytical plan for samples collected from LOU 59 will include analyses for VOCs, SVOCs, TPH, and cyanide.
- For further information please refer to the specific LOU data packages.

**Known or Potential Chemical Classes:**

- Metals
- Hexavalent chromium
- Wet chemistry analytes
- Perchlorate
- Cyanide (associated with LOU 62)
- VOCs (associated with LOUs 4, 28, 36, 62, 65a & b)
- SVOCs (associated with LOUs, 4, 28, 62, 65a & b)
- TPH (associated with LOUs 4, 27, 28, 36, 41, 62, 65a & b)
- Organochlorine pesticides (associated with LOU 4)

**Known or Potential Release Mechanisms:**

- Releases to soil could have occurred due to breaks or leaks of liner pipes or at pipe joints/connections; however, no releases have been reported in the documents reviewed.
- If releases occurred on an on-going basis, migration to the groundwater would be possible; however, no releases have been reported in the documents reviewed.
- Discharges to the sanitary sewer via the acid drain system occurred on at least three occasions in 1974 to facilitate repairs to the leaking liner in one of the surface impoundments in LOU 62 [Ref. 7].
- Waste from LOU 4 (Hardesty Chemical Company) was discharged to the “sewer” [Ref. 1 and 6].
- Prior to 1976, waste waters conveyed by the Storm Sewer System were discharged to surface water of the Beta Ditch (LOU 5) [Ref. 7].

**Summary of Available Data for LOU 59 in Area IV  
Storm Sewer System**  
Tronox Facility – Henderson, Nevada

- Results of Historical Sampling:**
- No known historical soil sampling was identified in the documents reviewed for LOU 59 in Area IV.
  - Downgradient monitoring wells (M-92, M-93, and M-97) are tested for total chromium, perchlorate, and total dissolved solids as part of periodic or routine groundwater monitoring programs [Ref. 3]. Analytical results are summarized in LOU 59 Area IV Table 6 [Ref. 3].

- Did Historical Samples Address Potential Release?**
- No

- Summary of Phase A SAI:**
- Soil
    - Upgradient boring M116 (upgradient) [Ref. 3] and Phase A SA03 (upgradient) and SA04 (upgradient and adjacent) are located near LOU 59 and were specifically sampled to evaluate this LOU [Ref. 4].

Groundwater

- Wells M-92 and M-97 are located downgradient of LOU 59 and were sampled specifically to evaluate this LOU [Ref. 4].

Chemical classes detected in Phase A soil borings SA03 and SA04:

- Metals
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

As a result of the Phase A data, the Phase B analytical plan for samples collected from LOU 59 in Area IV will be expanded to include analyses for dioxins/furans, radionuclides, and asbestos.

Analytical results for soil and groundwater from the Phase A sampling event are summarized in LOU 59 Area IV Tables 1 through 5 and LOU 59 Area IV Tables 7 through 22 (see attached) [Ref. 4].

- Are Phase A Sample Locations in “Worst Case” Areas?**
- No

**Summary of Available Data for LOU 59 in Area IV  
Storm Sewer System**  
Tronox Facility – Henderson, Nevada

**Is Phase B Investigation Recommended?**

- Yes

**Proposed Phase B Soil Investigation/Rationale:**

The Phase B Source Area Investigation of LOU 59 in Area IV consists of collecting soil samples from 15 locations.

- Ten (10) soil borings will be drilled along the boundaries of LOU 59.
- Three (3) soil borings will be drilled south (upgradient) of LOU 59.
- Two (2) soil borings will be drilled north (downgradient) of LOU 59.
- All 15 borings along with the analytical program to evaluate soil samples from LOU 59 are listed on **Table A – Soil Sampling and Analytical Plan for LOU 59**.
- Soil sample locations consist of both judgmental and randomly-placed locations.
- Judgmental sample locations:
  - Designed to evaluate soil for known or potential chemical classes associated with LOU 59, based on the known process waste streams.
  - Seven (7) of the 15 sample locations are judgmental locations and consist of soil borings SA205, SA192, SA111, SA115, SA116, SA118, and SA119.
- Random sample locations:
  - Designed to assess whether unknown constituents associated with LOU 59 are present.
  - Eight (8) of the 15 sample locations are randomly-placed locations and include soil borings RSAQ5, RSAR4, RSAR5, RSAS4, RSAT3, RSAT4, RSAT7, and RSAT8.

**Proposed Chemical Classes for Phase B Investigation for soils:**

Judgmental sample locations will be analyzed for the following LOU-specific analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Wet chemistry analytes
- Perchlorate
- Cyanide
- SVOCs
- VOCs
- Organochlorine pesticides
- TPH-DRO/ORO

## Summary of Available Data for LOU 59 in Area IV Storm Sewer System

Tronox Facility – Henderson, Nevada

Judgmental sample locations will also be analyzed for the following constituents for area-wide coverage purposes:

- Dioxins/furans
- Radionuclides
- Asbestos

Random sample grid locations will be analyzed for the following list of Phase A Site-related chemicals for LOU-specific and area-wide coverage purposes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH-DRO/ORO
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

**Proposed Phase B Groundwater Investigation/Rationale:**

The Phase B groundwater investigation of LOU 59 in Area IV consists of collecting groundwater samples from six locations to evaluate local groundwater conditions and as part of a Site-wide evaluation of constituent trends in groundwater.

- One (1) well south (upgradient) of LOU 59 in Area IV will be sampled. This well M-138.
- Five (5) wells north (downgradient or cross-gradient) of LOU 59 in Area IV will be sampled. These wells are: M-97, M-92, M-13, M-12A, and M-10.
- The analytical program to evaluate the groundwater sample associated with LOU 59 is listed on **Table B – Groundwater Sampling and Analytical Plan for LOU 59 in Area IV**.

**Proposed Phase B Constituents List for Groundwater:**

Groundwater samples will be analyzed for the following analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Radionuclides

## Summary of Available Data for LOU 59 in Area IV Storm Sewer System

Tronox Facility – Henderson, Nevada

**Proposed Phase B Soil Gas Investigation/Rationale:**

Five soil gas samples will be collected to evaluate area conditions for the presence of vapor-phase VOCs in the vadose zone.

- Soil gas points SG88, SG73, SG44, SG46, and SG64 are located within 50 feet of the Storm Sewer System to investigate the system as a potential VOC source.

Details of the soil gas sampling program are contained in the NDEP-approved (March 26, 2008) Soil Gas Survey Work Plan, Tronox LLC, Henderson, Nevada, dated March 20, 2008.

**Proposed Phase B Constituents List for Soil Gas:**

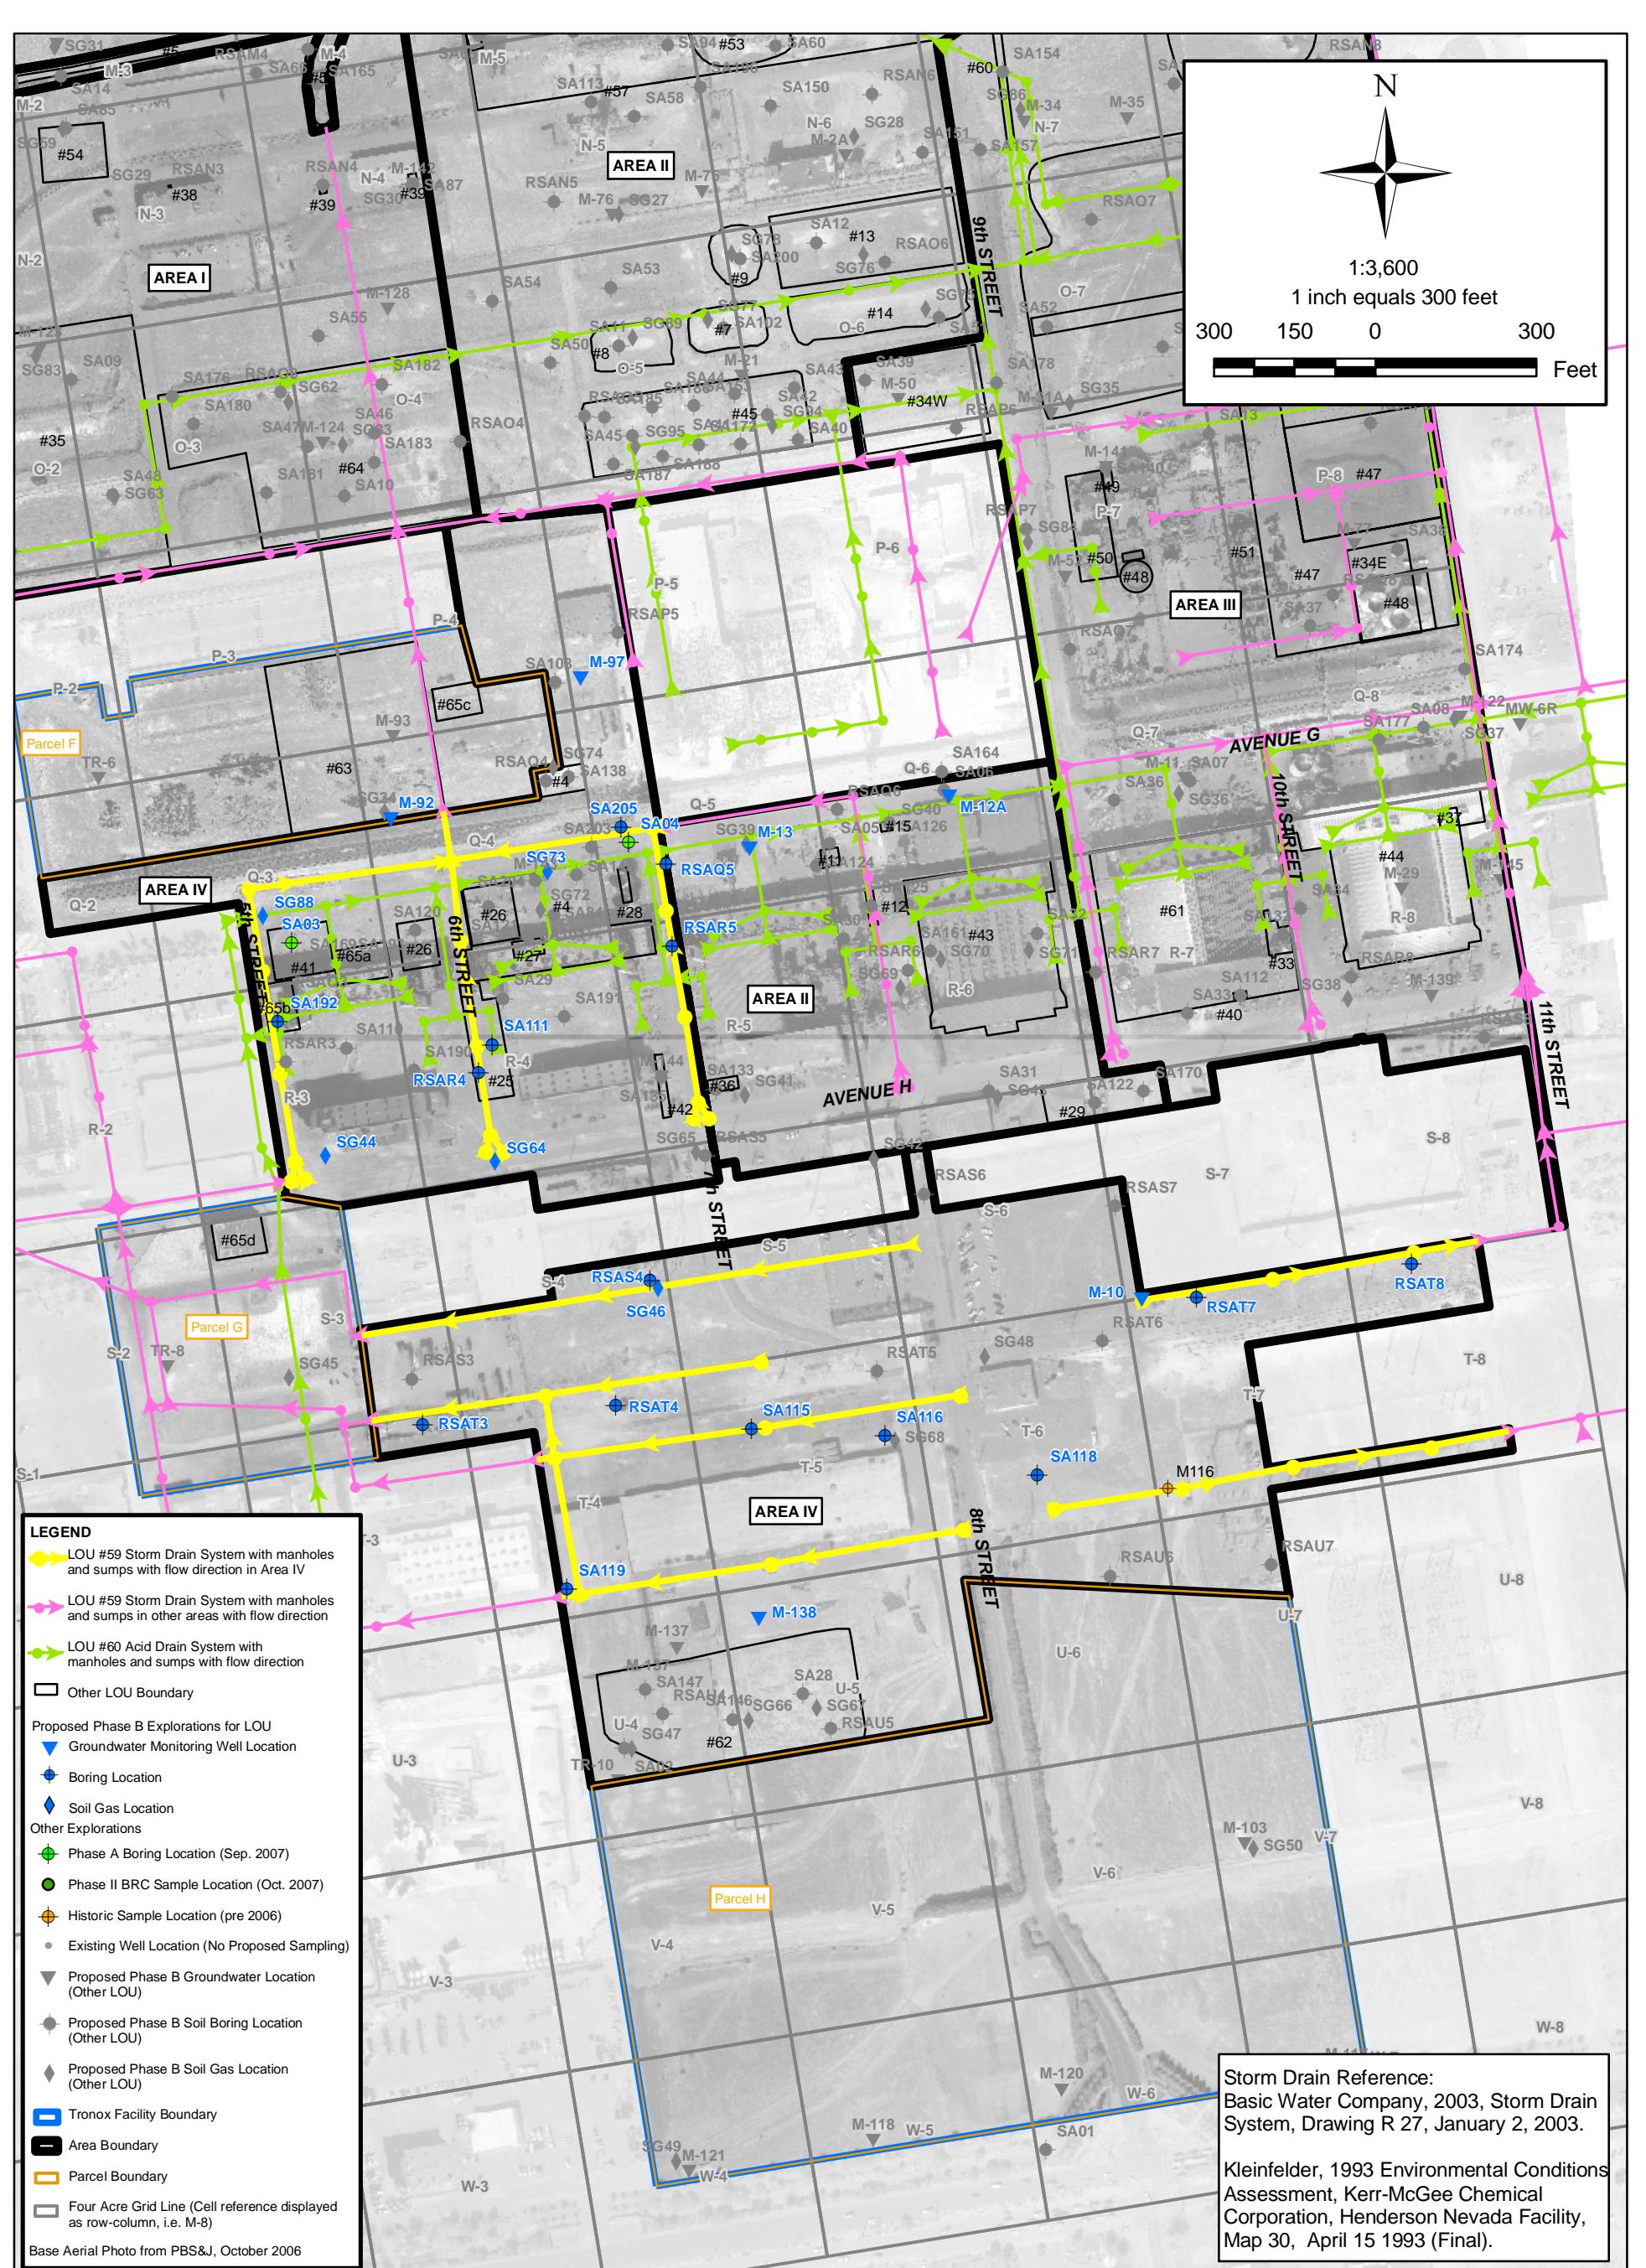

- VOCs (by EPA TO-15)

| 1. If area is paved, samples will be collected at 0.5 feet below, or if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.<br>2. Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.<br>3. Consists of wet chemistry parameters (including pH) listed on Table 1 of the Phase B Source Area Work Plan.<br>4. Organochlorine Pesticides (includes analysis for hexachlorobenzene).<br>5. Semi-volatile Organic Compounds<br>6. Radionuclides consists of alpha spec reporting for Thorium-230/232, Uranium 234/235, Uranium-238, and beta spec for Radium-226/228 (per NDEP).<br>7. Dioxins/furans: 90% will be tested by immunoassay, 10% analyzed by HRGC/HRMS in the laboratory.<br>8. Polychlorinated biphenyls<br>9. Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.<br>10. Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854, Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100). |            |                    |                  |                                      |                         |                   |                   |                         |                               |                            |                           |                           |                                |                             |  |                              |  |                                   |   |  |  |  |  |  |  |  |  |  |

| X   | Sample will be collected and analyzed.   |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| 1   | It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval. |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| 2   | VOCs = Volatile organic compounds (to include analysis for naphthalene).   |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| 3   | OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).  |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| 4   | SVOCs = Semi volatile organic compounds.   |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| 5   | Radionuclides consists of alpha spec reporting for Thorium-230/232, Uranium 234/235, Uranium-238, and beta spec for Radium-226/228 (per NDEP).   |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |
| (a)   | (a) Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.  |                     |                  |                          |  |                                 |                         |                   |        |                              |                   |                           |                               |                                |                             |   |

**Summary of Available Data for LOU 59 in Area IV  
Storm Sewer System  
Tronox Facility – Henderson, Nevada**

**Soil and Groundwater Characterization Data**

**Summary of Available Data for LOU 59 in Area IV  
Storm Sewer System  
Tronox Facility – Henderson, Nevada**

LOU-specific analytes identified include:

- Wet chemistry analytes
- Dioxins/furans
- Metals
- Organochlorine pesticides
- Perchlorate
- Radionuclides
- SVOCs
- TPH
- VOCs
- Asbestos

The tables in **BOLD** below present Phase A data associated with these LOU-specific analytes.

**LOU 59 Area IV Table 1 – Soil Characterization Data – Wet Chemistry**

**Notes:**

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility - Henderson, Nevada, September 2007.
2. U.S. EPA, Region 6, Medium Specific Screening Levels (MSSLs) for Industrial - Outdoor Worker (March, 2008)
  - (a) Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
  - (b) Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
  - (h) Dioxins and furans were expressed as 2,3,7,8- TCDD TEQ (toxic equivalents), calculated using the TEFs (Toxic Equivalency Factors) published by Van den Berg et al., 2006.
  - (v) USEPA, 1998. Approach for Addressing Dioxin in Soil at CERCLA and RCRA Sites. OSWER Directive 9200.4-26. April, 1998. Midpoint of the range of 0.005 to 0.02 mg/kg for commercial/industrial soils.

**Notes:**

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility, Henderson, Nevada, September 2007.
  2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.
- (j) Secondary Drinking Water Regulation value.  
 (c) Equal to the USEPA Region 9 Preliminary Remediation Goals (PRGs) for tapwater (October, 2004).  
 (p) The national primary drinking water regulations (b) lists a treatment technology action level of 1.3 mg/l as the MCL for Copper. Therefore, the secondary value is not used.  
 (u) See footnote (b). Treatment technology action level.  
 (a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

**Notes:**

1. ENSR, 2007, Quarterly Performance Report for Remediation Systems, Tronox LLC, Henderson, Nevada, July-September 2007, November 2007.

2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.

(a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

(m) Equal to the provisional action level derived by NDEP as referenced in "Defining a Perchlorate Drinking Water Standard". NDEP Bureau of Corrective Action. URL [[http://ndep.nv.gov/bca/perchlorate02\\_05.htm](http://ndep.nv.gov/bca/perchlorate02_05.htm)].

(j) Secondary Drinking Water Regulation value.

Blank cell or --- = no data and or no qualifier

Qual = data qualifiers applied by laboratory or during data validation

TDS = Total Dissolved Solids

mg/l = milligram per liter

**Laboratory Qualifiers:**

d = the sample was diluted

ud = the sample was diluted and was not detected above the sample reporting limit

**Validation Qualifiers:**

J = the result is an estimated quantity

U = the analyte was analyzed for, but was not detected above the sample reporting limit

2. U.S. EPA, Region 6, Medium Specific Screening Levels (MSSLs) for Industrial - Outdoor Worker (March, 2008)

(jj) Value for naphthalene used as surrogate for 2-methylnaphthalene based on structural similarities.

(pp) Value for acenaphthene used as surrogate for acenaphthylene based on structural similarities.

(w) Value for pyrene used as surrogate for benzo(g,h,i)perylene based on structural similarities.

(n) Value for anthracene used as surrogate for phenanthrene due to structural similarities.

Notes:

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility - Henderson, Nevada, September 2007.

2. ENSR, 2006, Upgradient Investigation Results, Tronox Facility, Henderson, Nevada, October 30, 2006.

(mm) PRG is based on the soil saturation limit. Therefore, the risk-based value provided in the electronic backup to the PRG table was used.

(gg) Value for 1,3-dichloropropene used as surrogate for 1,1-dichloropropene, cis-1,3-dichloropropene and trans-1,3-dichloropropene based on structural similarities.

(hh) Value for 1,2,4-trichlorobenzene used as surrogate for 1,2,3-trichlorobenzene based on structural similarities.

(ii) Value for 1,2-dichloropropane used as surrogate for 2,2-dichloropropane based on structural similarities.

(nn) Value for methyl isobutyl ketone used as surrogate for 2-hexanone based on structural similarities.

(ww) Value for 2-chlorotoluene used as surrogate for 4-chlorotoluene based on structural similarities.

(qq) Value for bromodichloromethane used as surrogate for bromochloromethane due to structural similarities.

(xx) Value for methylene bromide used as surrogate for dibromomethane based on structural similarities.

(kk) Value for methyl tertbutyl ether (MTBE) used as surrogate for ethyl-tert-butyl ether (ETBE) based on structural similarities.

(zz) Isopropyl benzene is listed as cumene (isopropylbenzene) in the MSSL table.

**Notes:**

1. ENSR, 2007, Phase A Source Area Investigation Results, Tronox Facility - Henderson, Nevada, September 2007.
2. U.S. EPA Maximum Contaminant Level (MCL) values unless noted.

(gg) Value for 1,3-dichloropropene used as surrogate for 1,1-dichloropropene, cis-1,3-dichloropropene and trans-1,3-dichloropropene based on structural similarities.

(hh) Value for 1,2,4-trichlorobenzene used as surrogate for 1,2,3-trichlorobenzene based on structural similarities.

(yy) PRG table (c) lists both cancer and non-cancer endpoint-based values. The cancer endpoint-based values were selected, as the cancer endpoint-based values are lower than the noncancer endpoint-based values.

(ii) Value for 1,2-dichloropropane used as surrogate for 2,2-dichloropropane based on structural similarities.

(nn) Value for methyl isobutyl ketone used as surrogate for 2-hexanone based on structural similarities.

(ww) Value for 2-chlorotoluene used as surrogate for 4-chlorotoluene based on structural similarities.

(qq) Value for bromodichloromethane used as surrogate for bromochloromethane due to structural similarities.

(o) See footnote (b). Listed under synonym monochlorobenzene.

(xx) Value for methylene bromide used as surrogate for dibromomethane based on structural similarities.

(kk) Value for methyl tertbutyl ether (MTBE) used as surrogate for ethyl-tert-butyl ether (ETBE) based on structural similarities.

(zz) Isopropyl benzene is listed as cumene (isopropylbenzene) in the PRG table.

**LOU 59 Area IV**  
**Notes for Phase A Data Tables**

Storm Sewer System  
Tronox Facility - Henderson, Nevada

|             |  |
|-------------|--|
| Blank       | Not analyzed.  |
| <b>Bold</b> | Bold values are constituents detected above the laboratory sample quantitation limit.  |
| Gray        | Grayed out values are non-detected values with the laboratory sample quantitation limits shown.                                    |
| B           | The result may be a false positive totally attributable to blank contamination.  |
| D           | Dissolved Metals   |
| DO          | Dissolved Oxygen   |
| J           | The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample. |
| J-          | The result is an estimated quantity and the result may be biased low.  |
| J+          | The result is an estimated quantity and the result may be biased high.   |
| JB          | The result may be biased high partially attributable to blank contamination.   |
| JK          | The result is an estimated maximum possible concentration.   |
| R           | The result was rejected and unusable due to serious data deficiencies. The presence or absence of the analyte cannot be verified.  |
| S           | Soluable metals  |
| T           | Total Metals   |
| U           | The analyte was analyzed for, but was not detected above the laboratory sample quantitation limit.                                 |
| UJ          | The analyte was not detected above the laboratory sample quantitation limit and the limit is approximate.                          |
| mg/kg       | Milligrams per kilogram  |
| mg/L        | Milligrams per liter   |
| ml/min      | Milliliters per minute   |
| ng/kg       | Nanogram per kilogram  |
| nm          | Not measured.  |
| NTUs        | Nephelometric Turbidity Units  |
| ORP         | Oxidation-reduction potential  |
| pCi/g       | PicoCuries per gram  |
| pci/L       | PicoCuries per liter   |
| s/gPM10     | Revised protocol structures per gram PM10 fraction dust.   |
| TEF         | Toxic Equivalency Factor   |
| TEQ         | Toxic Equivalent Concentration   |
| ug/kg       | Micrograms per kilogram  |
| ug/L        | Micrograms per liter   |
| umhos/cm    | MicroSiemens per centimeter.   |
| L           | Sample ID suffix indicating the sample was collected using low low-flow pumping rates (100-150 ml/min).                            |
| F           | Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min) and field filtered.             |
| Z           | Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min).                                |
| *           | No analytical data is available for this sample due to a laboratory error.   |
| (a)         | Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).  |
| (b)         | Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.   |
