- 1. RTC 1, NDEP has the following comments:
  - a. The NDEP finds TRX's description and method acceptable.
  - b. TRX should document the calibration and other QA/QC checks used during the helium analysis method and keep them for the record to document that helium results are based on quality procedures.
  - c. TRX should also cite the ITRC source that discusses using helium tracer and the New York State Department of Environmental Conservation document that allows tracer concentrations up to 10% before the sample is considered compromised.
  - d. TRX should note that all the sampling parameters and QC checks (e.g. dead volume) performed during the field work should be documented. This documentation does not have to be included in the DVSR but should be available if questions on the sampling arise.
