

## Summary of Available Data for LOU 1 – Former Trade Effluent Settling Ponds

Tronox Facility – Henderson, Nevada

<b>Name of Facility:</b>	(Former) Trade Effluent (TE) Settling Ponds
<b>Goal of Closure:</b>	<ul style="list-style-type: none"> <li>• Closure for future commercial/industrial uses, except for active facilities (ponds, etc.) which will be closed later.</li> </ul>
<b>Site Investigation Area:</b>	<ul style="list-style-type: none"> <li>• Size: Approximately 49-acres [Ref. 4]</li> <li>• Location: North-central portion of the Site south of Warm Springs Road.</li> <li>• Current Status/Features: The TE settling ponds are no longer active. The area is currently occupied by Pond GW-11, Pond WC-West (LOU 22), Pond WC-East (LOU 23), the Hazardous Waste Landfill (LOU 10), and the Groundwater Injection Trenches that are part of LOU 32. Additionally, portions of LOU 1 were located to the west of the Tronox site, inside of the BMI Complex [Ref 5].</li> </ul>
<b>Description:</b>	<ul style="list-style-type: none"> <li>• The TE settling ponds were operated by the U.S. Government and likely began receiving liquid wastes when operation started in 1942 and may have been used until the magnesium plant closed on November 15, 1944 [Ref.4].</li> <li>• Actual dates of pond operation are not known [Ref.4].</li> <li>• In the 1940s, four surface impoundments (ponds T3-T6) (20-acres each) were located inside the BMI Complex. The two easternmost TE settling ponds (ponds T5 and T6) and part of a third pond (pond T4) were located within what is now Tronox property [Ref. 5].</li> <li>• The TE settling ponds were unlined and constructed of earthen dikes along northern, eastern, and western margins. An earthen dike along the southern margin was unnecessary due to natural north sloping topography [Ref. 4].</li> <li>• A French drain system was incorporated north of the ponds [Ref. 4]. The outlet of the French drain is not known. Currently the French drain system is inactive. This feature has been evaluated as part of the Phase II Parcel C sampling program by BRC.</li> </ul>
<b><u>Pre-1944:</u></b>	<ul style="list-style-type: none"> <li>• Waste was conveyed via the acid drain system (LOU 60) and absorber drain system from all 10 Unit buildings northward to the acid neutralization plant (see LOU 60 Data Package for location of acid neutralization plant). A distribution flume then conveyed the waste from the acid effluent neutralization plant to the TE settling ponds [Ref. 4].</li> <li>• Initially, acid waste was neutralized with waste caustic liquor prior to discharge to the TE settling ponds. The neutralization process was abandoned when the caustic</li> </ul>

line disintegrated and un-neutralized liquid acid wastes were discharged directly to the TE settling ponds [Ref. 4].

- Waste from the sodium chlorate plant was discharged to the acid drain system, which eventually led to the TE settling ponds [Ref. 4].
- A 1943 aerial photograph of the BMI Complex showed linear 'streaks' extending northward of the TE settling ponds suggesting possible seepage from the TE settling ponds [Ref. 5].
- Use of these TE settling ponds for liquid waste management after November 15, 1944 is not known. [Ref. 4].

### Post-1944:

- The TE settling ponds received solid materials/wastes at various times between 1945 and 1979 based on aerial photos taken in 1950, 1960, 1969, and 1979 [Ref. 4 and 5].
- From 1945 to approximately 1947, Hardesty Chemical Company (LOU 4) operated in Unit 2. Waste effluent from Hardesty may have been discharged into the acid drain system (LOU 60) which may have been discharged to LOU 1 [Ref. 4 and 5].
- Sodium chlorate and sodium perchlorate were produced by electrolytic processes on the first floor of Units 4 and 5, in LOU 43, from 1945 to 1989. Production waste was discharged to the acid drain system which may have been discharged to LOU 1 [Ref. 4 and 7].
- After about 1945, waste was routed from the TE settling ponds to the Beta Ditch [Ref. 4] and by 1950s, the aboveground flume that conveyed wastes to the TE settling pond area was no longer visible in the aerial photographs [Ref. 5].
- Portions of the southern extent of the former TE settling ponds were converted to ammonium perchlorate (AP) storage areas, circa 1953 [Ref. 4].
- The majority of the TE settling pond area remained inactive until the 1980s [Ref. 4].
- From February 1980 to January 1983: the hazardous waste landfill (LOU 10) was constructed and operated in the western portion of the area formerly occupied by TE settling pond T4 [Ref 4].
- Sodium chlorate filter cakes originating from the sodium chlorate process were disposed of at the Onsite Hazardous Waste Landfill [Ref. 4].

## Summary of Available Data for LOU 1 – Former Trade Effluent Settling Ponds

Tronox Facility – Henderson, Nevada

- The sodium chlorate filter cakes consisted of diatomaceous earth with carbon, calcium sulfate, sodium carbonate, calcium carbonate, sodium chloride, sodium chlorate, and 0.5% to 1% hexavalent chromium [Ref. 4].
- From September to October 1985: The landfill was closed and a multi-layered cover system was constructed over the landfill [Ref. 4].
- In 1985/1986, two groundwater recharge trenches (associated with LOU 32) were installed and subsequently replaced in 1994 [Ref. 8]. The trenches are located along the southern boundary of TE settling pond T6 and are in use today. Water from Lake Mead is injected into these trenches to replenish the groundwater that is extracted for on-site treatment to remove hexavalent chromium and perchlorate.
- October 1988: surface impoundments WC-West (LOU 22) and WC-East (LOU 23) were constructed in part of the area formerly occupied by TE Settling Pond T6 [Ref. 4, 5].
- November 1998: Pond GW-11 was constructed in the area formerly occupied by TE settling pond T5. GW-11 is a double-lined pond that is currently in use to temporarily store groundwater treated for hexavalent chromium for processing by the on-site perchlorate groundwater treatment plant [Ref. 6].

## Summary of Available Data for LOU 1 – Former Trade Effluent Settling Ponds

Tronox Facility – Henderson, Nevada

**Overlapping or Adjacent LOUs:** The following LOUs overlap or are adjacent to LOU 1:

### Results of Historical Sampling:

- Surface and subsurface soils samples were collected (in 1987) prior to the construction of WC-West and WC-East, and analyzed for EP Toxicity procedures, six organic compounds, and eight RCRA metals [Ref. 4].
- In 1997, several borings (SB1-1 through SB1-7) were drilled within the area formerly occupied by the TE settling ponds, prior to the construction of the GW-11 Pond [Ref. 1]. Soil samples were collected at depths up to 10 feet below ground surface (bgs) and tested for eight metals (arsenic, barium, cadmium, total chromium, lead, mercury, selenium, and silver [Ref. 1].
- Groundwater is collected on a periodic or quarterly basis from the following wells: M-7B, M-79, M-83, M-84, M-88, M-98, M-99, M-100, M-101, and M-102.
- Analytical results from historical sampling events are summarized: LOU 1 Tables 6 and 7 (see attached).

- (a) Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
- (b) Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
- (h) Dioxins and furans were expressed as 2,3,7,8-TCDD TEQ (toxic equivalents), calculated using the TEFs (Toxic Equivalency Factors) published by Van den Berg et al., 2006.

**Explanation**

1. ENSR, 2007, Quarterly Performance Report for Remediation Systems, Tronox Facility - Henderson, Nevada, July – September 2007.

2. USEPA values unless noted

(a) NAC 445A.455 Secondary standards. Certain provisions of the National Primary Drinking Water Regulations are adopted by reference (NAC 445A.4525). These values are listed in the first column of this table and are therefore not listed again here. Only NAC 445A.455 Secondary standards are listed.

(m) Equal to the provisional action level derived by NDEP as referenced in "Defining a Perchlorate Drinking Water Standard". NDEP Bureau of Corrective Action. URL [[http://ndep.nv.gov/bca/perchlorate02\\_05.htm](http://ndep.nv.gov/bca/perchlorate02_05.htm)].

(j) Secondary Drinking Water Regulation value.

< = less than the reporting limit

Blank cell or --- = no data and/or no qualifier

Qual = data qualifiers applied by laboratory or during data validation

**Explanation**

TDS = Total Dissolved Solids

mg/l = milligram per liter

**Laboratory Qualifiers:**

d = the sample was diluted

u = the analyte was not detected above the sample reporting limit

ud = the sample was diluted and was not detected above the sample reporting limit

**Validation Qualifiers:**

J = the result is an estimated quantity

J- = the result is an estimated quantity and the result may be biased low

U = the analyte was analyzed for, but was not detected above the sample reporting limit

UJ = the sample was not detected above the sample reporting limit and the reporting limit is approximate

(mm) PRG is based on the soil saturation limit. Therefore, the risk-based value provided in the electronic backup to the PRG table was used.

(gg) Value for 1,3-dichloropropene used as surrogate for 1,1-dichloropropene, cis-1,3-dichloropropene and trans-1,3-dichloropropene based on structural similarities.

(hh) Value for 1,2,4-trichlorobenzene used as surrogate for 1,2,3-trichlorobenzene based on structural similarities.

(yy) PRG table (c) lists both cancer and non-cancer endpoint-based values. The cancer endpoint-based values were selected, as the cancer endpoint-based values are lower than the noncancer endpoint-based values.

(ii) Value for 1,2-dichloropropane used as surrogate for 2,2-dichloropropane based on structural similarities.

(nn) Value for methyl isobutyl ketone used as surrogate for 2-hexanone based on structural similarities.

(ww) Value for 2-chlorotoluene used as surrogate for 4-chlorotoluene based on structural similarities.

(qq) Value for bromodichloromethane used as surrogate for bromochloromethane due to structural similarities.

(xx) Value for methylene bromide used as surrogate for dibromomethane based on structural similarities.

(kk) Value for methyl tertbutyl ether (MTBE) used as surrogate for ethyl-tert-butyl ether (ETBE) based on structural similarities.

(zz) Isopropyl benzene is listed as cumene (isopropylbenzene) in the PRG table.
