

TECHNICAL MEMORANDUM

To: Nevada Environmental Response Trust

Cc: Nevada Division of Environmental Protection
United States Environmental Protection Agency

From: Dan Pastor and Dana Grady

Date: October 19, 2018

Subject: Las Vegas Wash Bioremediation Pilot Study Monthly Progress Report

At the direction of the Nevada Environmental Response Trust (NERT or Trust), Tetra Tech, Inc. (Tetra Tech) has prepared this memorandum which summarizes Tetra Tech's progress during August 2018 toward successfully implementing the Las Vegas Wash Bioremediation Pilot Study.

Task Progress Update: August 2018

Task M19 – Las Vegas Wash Pilot Study

- Task Leader – Dana Grady/Dan Pastor
- Current Status
 - Phase 1 pre-design field activities continue to be performed during this reporting period to gather relevant data and information required to optimize the final pilot study locations and design (targeted treatment interval and depth, contaminant concentrations, etc.). Based on the data collected thus far, a Treatability/Pilot Study Modification No. 2 – Las Vegas Wash Bioremediation Pilot Study (referred to herein as Modification No. 2) was submitted and approved by NDEP in August 2018. Following implementation of this modification, the Phase 1 findings and resulting Phase 2 pilot study design will be presented to NDEP, EPA and the NERT Stakeholders, followed by a third-party cost evaluation and submittal of the Las Vegas Wash Bioremediation Pilot Study Work Plan Addendum.
 - A figure set has been provided to include an overview figure (Figure 1) and Phase 1 pre-design soil boring/monitoring well location figures (Figures 2 and 3).
 - As stated in previous monthly progress reports, all Phase 1 pre-design field activities in the planned Transect 1A area located on the City of Henderson (COH) parcel (Figure 2) have been completed. Results not discussed in previous monthly progress reports are presented below:
 - Nuclear magnetic resonance (NMR) logging of the deepest well in each of the twelve locations (LVWPS-MW101 through LVWPS-MW112) began on May 29, 2018 and was completed on June 8, 2018. In general, the NMR data matched the field boring logs, with

total porosities consistent with what would be typically expected of sandy/gravelly material in the alluvium (average of 0.23) and silty to clayey material in the Upper Muddy Creek formation (average of 0.45).

- Borehole dilution testing of monitoring wells LVWPS-MW107A and LVWPS-MW107B was completed the week of June 18, 2018. Results indicate that the groundwater flow velocity is approximately 5 ft/day through LVWPS-MW107A (screened from approximately 25 to 35 ft bgs) and 0.07 ft/day through LVWPS-MW107B (screened from approximately 46 to 66 ft bgs).
- The Phase 1 pre-design field activities in the planned Transect 1B area (Figure 3) described in the Las Vegas Wash Bioremediation Pilot Study Work Plan began on May 16, 2018 and were completed in July 2018. Additional Phase 1 pre-design work as part of Modification No. 2 began on August 27, 2018. The attached Figure 3 provides a map of the Phase 1 pre-design monitoring well locations and new locations that are being installed as part of Modification No. 2. Results not discussed in previous monthly progress reports and a summary of on-going activities as part of Modification No. 2 are presented below:
 - During drilling activities, soil samples were collected for phospholipid fatty acids and perchlorate reductase. Table 1 presents a summary of soil microbial results from the Transect 1B area. The perchlorate reductase gene is not present in the soil samples; however, the total biomass population is in range of 10^6 to 10^7 cells per gram in samples with detections, which indicates a healthy microbial environment. Although total biomass was not detected above laboratory detection limits in other soil samples, the laboratory detection limits are fairly high at 10^5 cells per gram. Additional microbial sampling will be performed as part of Modification No. 2 to confirm these results and evaluate the microbial community at deeper intervals. The microbial results will be discussed in more detail in the Las Vegas Wash Bioremediation Pilot Study Work Plan Addendum.
 - NMR logging of the deepest well in each of the sixteen locations (LVWPS-MW201 through LVWPS-MW216) began on July 9, 2018 and was completed on July 15, 2018. Data processing is ongoing, and a brief summary of the results will be provided once the processing is complete.
 - Slug testing in all 27 new monitoring wells was completed the weeks of July 9 and July 16, 2018. Results of the slug testing indicate a range of hydraulic conductivities (K). Specifically:
 - K values resulting from tests in alluvial wells ranging from 6 to 262 ft/day.
 - K values resulting from tests in UMCf wells were less than approximately 5 ft/day, with some values as low as 0.1 ft/day depending on the degree of cementation and consolidation present.
 - Borehole dilution testing of monitoring wells LVWPS-MW201A, LVWPS-MW203B, LVWPS-MW206B, and LVWPS-MW208A was completed the week of July 16, 2018. Data processing is ongoing, and a brief summary of the results will be provided once the processing is complete.
 - Bio-traps® were placed in monitoring wells LVWPS-MW210A/B/C, LVWPS-MW203B, and LVWPS-MW206C on June 28, 2018. Bio-traps® were retrieved on August 2, 2018 and sent for testing of phospholipid fatty acids and perchlorate reductase. Results will be summarized once data has been received and evaluated.
 - Surface water sampling was performed the week of July 23, 2018. Results will be summarized once data has been received and evaluated.

- Activities scheduled as part of Modification No. 2 include installation of additional soil borings and monitoring wells, soil and groundwater sampling, slug testing, borehole dilution testing, and NMR logging. Drilling associated with this modification began on August 27, 2018 and is on-going.
- Schedule and Progress Updates
 - Field work associated with Modification No. 2, which includes drilling, well installation, soil and groundwater sampling, and aquifer testing, began on August 27, 2018 and is expected to continue through November 2018. All work will be performed as expeditiously as possible to minimize overall schedule impacts.
 - Phase 1 findings and final Phase 2 design will be presented in the first or second quarter of 2019.
- Health and Safety
 - There were no safety incidents related to Task M19 during August 2018.

CERTIFICATION

Las Vegas Wash Bioremediation Pilot Study Monthly Progress Report

Signature:  _____, not individually, but solely in his representative capacity as President of the Nevada Environmental Response Trust Trustee

*not individually, but solely
as President*

Name: Jay A. Steinberg, not individually, but solely in his representative capacity as President of the Nevada Environmental Response Trust Trustee

Title: Solely as President and not individually

Company: Le Petomane XXVII, Inc., not individually, but solely in its representative capacity as the Nevada Environmental Response Trust Trustee

Date: 10/19/18

CERTIFICATION

I hereby certify that I am responsible for the services described in this document and for the preparation of this document. The services described in this document have been prepared in a manner consistent with the current standards of the profession, and to the best of my knowledge, comply with all applicable federal, state, and local statutes, regulations, and ordinances. I hereby certify that all laboratory analytical data was generated by a laboratory certified by the NDEP for each constituent and media presented herein.

< The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

J- The result is an estimated quantity, but the result may be biased low.

J+ The result is an estimated quantity, but the result may be biased high.

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes

ft feet
 bgs below ground surface
 % percent
 lbs/ft³ pounds per cubic foot
 --- Not analyzed; Material was too loose to obtain in-situ density.
