**SOIL EXCAVATION WORK PLAN, SMP-REQUIRED NOTIFICATIONS AND
CONTINGENCY PLAN**
DIOXIN SOIL REMEDIATION AREA
NEVADA ENVIRONMENTAL RESPONSE TRUST SITE
HENDERSON, NEVADA

Dear Dr. Dong:

January 7, 2019

On behalf of the Nevada Environmental Response Trust ("NERT" or the "Trust"), Ramboll US Corporation (Ramboll) is pleased to present this Soil Excavation Work Plan, SMP-Required Notifications, and Contingency Plan ("Work Plan") for the remediation of a dioxin-impacted area of soil at the NERT Site in Henderson, Nevada. The excavation program is scheduled for the first quarter of 2019. This document has been prepared in accordance with the Site Management Plan, Revision 4, dated March 22, 2018 ("SMP"; Ramboll 2018a) and approved by NDEP on March 29, 2018. The Trust has been advised of and approves this document. Approval of this document by the Nevada Division of Environmental Protection (NDEP) is required prior to initiating the work described herein.

In addition to providing this Work Plan to conduct the soil remediation, this document addresses the following notifications and requirements of the SMP:

- Sections 4.2 and 4.3 require specific soil management actions for Excavation Control Area (ECA) soils that are to be excavated, including stockpiling, analytical requirements for disposal characterization, and confirmation sampling. The excavation includes a portion of ECA D3.
- Section 4.7 describes notifications and procedures to follow in the event of an emergency project related to an accidental spill or release.
- Section 5.3 requires notification to and approval from NDEP and the Trust for work to be performed within 50 feet of any on-site groundwater extraction and treatment system (GWETS) component or monitoring well.
- Section 5.7 requires submittal of a contingency plan to NDEP and the Trust for approval, describing actions to be taken in case of accidental release of untreated groundwater due to damage to any GWETS component.

BACKGROUND INFORMATION

During the preparation of the *Interim Report: Identification of COPCs and Decision Units for OU-1 Soils, Revision 1* (dated November 15, 2017, approved by NDEP on December 27, 2017) (Ramboll Environ 2017a), a spatial analysis was conducted which involved comparing Site chemicals of potential concern (COPCs) to Soil Screening Levels to identify potential areas of elevated chemical concentrations in soil. The spatial analysis using dioxin toxicity equivalent (TEQ) data compared to the site-specific dioxin TEQ action level (2,700 picograms per gram [pg/g], equivalent to 0.0027 milligrams per kilogram [mg/kg]), revealed an area with elevated dioxin TEQ concentrations near the southwest corner of the GW-11 pond at the NERT Site.

As part of the pre-confirmation sampling event in April 2010, one soil sample location (SSAK3-05) at 0 to 0.5 feet below ground surface (ft bgs) had a reported dioxin TEQ concentration of 11,330 pg/g, above the site-specific action level. In the next deeper sample at a depth of 1 to 2 ft bgs, the dioxin TEQ concentration (250 pg/g) was below the site-specific action level. This area was not identified for excavation in the 2010/2011 interim soil removal action (Northgate 2010). Imported clean fill material was subsequently added to the area, and based on soil remediation records, the adjusted depths of the samples are 2.5 to 3.0 ft bgs (dioxin TEQ above action level) and 3.5 to 4.5 ft bgs (dioxin TEQ below action level). The dioxin TEQ concentration at a depth of 3 to 3.5 ft bgs at this location was identified as a data gap to be addressed with pre-excavation soil sampling.

Other pre-confirmation sample locations to the west and northwest of SSAK3-05 (e.g., SSAK2-01 and SSAK3-03) indicated chemical concentrations in shallow soil were below site-specific screening criteria, such that these areas did not require excavation polygons to be designated.

As part of the Phase 1 Remedial Investigation (RI) in October 2014, soil samples were collected at three additional locations (RISB-50, -51, and -52) in this area to further delineate dioxin TEQ concentrations in soil. The reported dioxin TEQ concentrations at 0.5 ft bgs at each of these sample locations were above the site-specific action level. Dioxin TEQ concentrations in the next deeper samples at these locations (5.0 ft bgs) were below the site-specific action level. Dioxin TEQ concentrations at depths between 0.5 feet and 5 ft bgs were identified as a data gap to be addressed with pre-excavation soil sampling.

2018 PRE-EXCAVATION SOIL SAMPLING

As shown on Figure 1, the dioxin soil excavation area is bounded laterally by previously remediated Remediation Zone D (RZ-D) excavation polygons to the northeast (D-08A), southeast (D-11), and south (D-12); and by 2010 pre-confirmation soil sampling locations SSAK3-03 and SSAK2-01 to the west.

In September 2018, in accordance with the Pre-Excavation Soil Sampling Work Plan (Ramboll 2018b; approved by NDEP on August 24, 2018), a pre-excavation soil sampling investigation was conducted to delineate the vertical and lateral extent of excavation to address identified data gaps for removal of dioxin TEQ concentrations above the site-specific action level. Pre-excavation soil sampling was performed based on the requirements of the NDEP-approved Sampling and Analysis Plan, Revision 1 (SAP) for the Site. The SAP is comprised of the Field Sampling Plan ("FSP"; ENVIRON 2014a), the Health and Safety Plan ("HASP"; ENVIRON 2014b), and the Quality Assurance Project Plan ("QAPP"; Ramboll Environ 2017b). Samples were analyzed for Dioxins and Furans by Environmental Protection Agency (EPA) Method 8290.

To delineate the northwestern boundary of the excavation, three boreholes (DSPE-1, DSPE-2, DSPE-3; see Figure 1) were advanced. These locations were sampled using hand auger drilling methods and manual

sampling tools. Samples were collected at approximately one-foot intervals between 0.5 and 5.0 ft bgs. The 0.5 foot and 1.5 foot sample depths were analyzed for dioxin TEQ and remaining samples were placed on laboratory hold.

For vertical delineation of the excavation, four additional boreholes (DSPE-4 through DSPE-7; see Figure 1) were co-located with previous soil sampling locations (RISB-50 through -52, and SSAK5-03; respectively), which were surveyed and staked. The co-located boreholes were intended to address the identified dioxin TEQ data gaps in the previously collected shallow soil data, as described above. Samples were collected from DSPE-4 through DSPE-6 (co-located with RISB-50 through -52) at approximately 1-foot intervals from 1.5 to 4.5 ft bgs, with the 1.5 foot depth samples analyzed and remaining samples placed on laboratory hold. Samples were collected from DSPE-7 (co-located with SSAK5-03) at depths of 1.5 ft bgs and 3.5 ft bgs, and both samples were analyzed.

During the pre-excavation sampling event, soil samples intended for waste characterization and profiling of excavated soil were collected from DSPE-4 through DSPE-7 at depths of 0.0 ft and 1 ft bgs. The samples were intended to represent the central area of soil to be excavated and disposed from the site, in order to profile the excavated soil volume for acceptance at an off-site disposal facility. The waste characterization samples were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals by EPA Methods 1311 (TCLP) and 6010B/7470A, total petroleum hydrocarbons (TPH) in the gasoline, diesel and motor oil ranges by EPA Method 8015B, volatile organic compounds (VOCs) by EPA Method 8260B, semivolatile organic compounds (SVOCs) by EPA Method 8270C, TCLP SVOCs, and organochlorine pesticides (OCPs) by EPA Method 8081A.

DIOXIN TEQ RESULTS

The results of pre-excavation sampling and analysis for dioxin TEQ are shown on Table 1, and laboratory analytical results are included as Attachment A. To ensure calculation consistency with other investigations, dioxin TEQs were calculated (or recalculated) using the results for dioxins/furans and the World Health Organization (WHO) toxicity equivalency factors (TEFs) scheme (Van den Berg M. et al. 2006). Non-detects were addressed using the Kaplan-Meier approach from the United States Environmental Protection Agency (USEPA) TEQ calculator.

At DSPE-1 and DSPE-2, detections of dioxin TEQ were well below the site-specific action level in the 0.5 ft and 1.5 ft depth samples. At DSPE-3, dioxin TEQ concentration of the sample from 1.5 ft bgs (12,000 pg/g) exceeded the site-specific action level and additional samples were removed from laboratory hold and analyzed. The 2 ft depth sample result (8,300 pg/g) exceeded the site-specific action level, and the 3 ft depth sample (2,400 pg/g) was marginally below the action level. The concentration of the 4 ft depth sample (3.6 pg/g) was well below the action level.

At DSPE-4 through DSPE-6, detections of dioxin TEQ in the 1.5 ft bgs samples (740 pg/g; 11 pg/g, and 44 pg/g, respectively) were below the site-specific action level. At DSPE-7, detections of dioxin TEQ at 1.5 feet (1.3 pg/g; within newer imported fill material) and 3 ft bgs (4.6 pg/g) were also below the site-specific action level.

WASTE PROFILING RESULTS

Table 2 provides a summary of soil sampling results for waste characterization and profiling, including the results of the current dioxin TEQ analyses and historical dioxin TEQ data. Laboratory analytical results are included as Attachment B.

In general, separate samples were collected for dioxin TEQ analysis and for waste profiling analyses. The results of waste profiling samples collected from DSPE-4 through DSPE-7 at depths of 0.0 and 1.0 ft bgs indicated that TCLP soluble concentrations of metals are below RCRA characteristic hazardous waste limits, and total concentrations of SVOCs, VOCs, and OCPs are also below RCRA characteristic waste limits (using the 20 times rule). The USEPA has concluded that an acceptable approach for evaluating toxicity is to compare the total concentration (in milligrams per kilogram) of TCLP constituents to a value that is 20 times the TCLP regulatory level (in milligrams per liter), reflecting the effective dilution that occurs during the test procedure when the waste sample is mixed with the extraction fluid. If the total concentrations are less than 20 times the TCLP regulatory thresholds, the material does not exhibit the toxicity characteristic and TCLP analysis is not required (USEPA 1994). The following points describe follow-on waste characterization analyses for individual samples:

- The 1.5 – 2.0 ft bgs sample from DSPE-3 had the highest detected dioxin TEQ concentration and was subsequently analyzed for RCRA metals and TCLP hexachlorobenzene, and the results of these analyses were below hazardous waste criteria. Sample volume limitations precluded a total SVOCs analysis or other waste characterization analyses on this sample.
- The 0.0 – 0.5 ft sample from DSPE-4 had a total hexachlorobenzene result above 20 times the RCRA characteristic hazardous waste limit. As such additional TCLP testing was completed and the TCLP result was below RCRA characteristic hazardous waste limits. The 1.5 – 2.0 ft bgs sample from DSPE-4 had a similar total hexachlorobenzene result, but a TCLP analysis was not run on the sample due to an expired hold time.

The current and historical analytical data will be submitted to disposal facilities for approval. If required by the selected disposal facility, additional samples may be collected prior to or during the excavation program, for chemical analysis in support of waste profiling and acceptance.

EXCAVATION SCOPE OF WORK

The dioxin soil excavation program is designed to address elevated dioxin TEQ concentrations identified during pre-excavation soil sampling and during prior soil sampling events. Consistent with previous soil removal activities conducted at the NERT site, the excavation boundary is based on Thiessen polygons generated during the prior soil remediation program, and on Thiessen polygons generated based on pre-excavation sampling results. Thiessen polygons were also generated to represent internal excavation boundaries defining excavation depth transitions. The excavation program will follow the requirements of the SMP as described herein, including SMP Attachment C (the NERT Hazardous Waste Management Plan [HWMP]) and SMP Appendix D (the Site Wide Dust Control Work Plan [SWDCP]).

The Thiessen polygons representing the proposed minimum excavation area and depths are shown on Figure 1. The combined area of the excavation polygons is approximately 0.4 acres. The excavation area may extend slightly beyond the horizontal polygon boundaries in order to create sloped sidewalls and ensure polygons are completely removed. The scope of the soil excavation program is summarized below.

- 1) **Surveying and Contractor Mobilization:** The excavation boundaries will be demarcated with survey stakes and the existing topography will be surveyed as needed for confirmation of excavation depth and surface restoration. The area to be excavated will be cleared for underground utilities using geophysical methods. Storm water best management practices (BMPs) will be set up at the site, and a Clark County Dust Control Operating Permit (DCOP) will be obtained by the excavation contractor. The excavation work will be conducted by Earth Resource Group Environmental Services (ERG) and will be overseen by Ramboll.
- 2) **Soil Excavation:** Excavation will be performed within the demarcated boundaries to depths as defined on Figure 1, ranging from 1.5 ft bgs to 4 ft bgs. Pending disposal facility review and approval of analytical data for waste profiling, the excavated soil is expected to be transported to Republic Services Apex Regional Landfill for disposal as non-hazardous waste. Up to approximately 2,400 tons of soil are expected to be generated, assuming a conversion factor of 1.6 tons per cubic yard (CY).
- 3) **ECA D3 Confirmation Sampling and Waste Characterization Soil Sampling:** For the portion of the excavation within ECA D3, the ECA soil will be stockpiled on plastic sheeting and composite samples will be collected for chemical analysis of all chemicals of concern associated with ECA D3, in accordance with SMP Section 4.3, for waste characterization. In addition, one bottom confirmation soil sample will be collected from the center of the ECA area and analyzed in accordance with SMP Section 4.2.4. The minimum required analyses for ECA D3 soil are listed in SMP Appendix A, Table A-1.
- 4) **Excavation Backfill and Compaction:** The excavation will be backfilled with a clean fill source in accordance with Section 3.5 of the SMP. Backfill materials will be compacted to at least 90% of maximum dry density. Compaction testing will be performed to confirm the compaction results.
- 5) **Site Restoration:** The excavation area will be restored based on previous surface topography and features, including a portion of the GW-11 access roadway.
- 6) **Completion Report:** A Soil Excavation Completion Report will be prepared and submitted to NDEP, including pre-excavation and confirmation sample data tables; figures showing excavation locations and depths; excavated soil volumes and disposal documentation; and a data validation summary report (DVSRR) for pre-excavation and confirmation soil sample analytical data.

SMP-REQUIRED CONTINGENCY PLAN

Per Sections 5.3 and 5.7 of the SMP, this document serves as notification of work to be performed within 50 feet of on-site GWETS components or monitoring wells and a contingency plan to NDEP and the Trust regarding field activities that have the potential for release of untreated groundwater. The purpose of the contingency plan is to describe the action to be taken in case of accidental release of untreated groundwater while performing activities described herein.

Precautions

Ramboll and subcontractor personnel will implement the following precautions and procedures during implementation of the field activities:

- Daily health and safety “tailgate” meetings will be held prior to the start of field work. In addition to discussions of health and safety hazards and prevention, the names and mobile phone numbers for all

field staff and subcontractors will be confirmed. Clear lines of communication will be established each day to ensure a swift and coordinated response to a release.

- Envirogen Technologies, Inc. (ETI), the GWETS operator, will be advised of work that may impact their operations (i.e. work within 50 feet of any GWETS component or monitoring well). As shown on Figure 1, monitoring well MW-16 is located within 50 feet of the planned excavation activities.

Spill Response Procedures

- The primary response action for a release of untreated groundwater during field activities will be to shut down and contain any uncontrolled flow. Pumping, vacuum and containment equipment will be available as needed. However, no underground groundwater conveyance piping is known to exist within the excavation boundaries, and based on the shallow depth of planned excavation, groundwater is unlikely to be encountered.
- A spill response kit will be readily available during field activities and utilized in the event of a release of untreated groundwater.
- As described in the SMP, if a release of untreated groundwater occurs, Ramboll will immediately notify Steve Clough of the Trust at (702) 960-4309, who will then notify Weiquan Dong of NDEP at (702) 486-2850, extension 252. If any GWETS components are shut down due to damage from the release of groundwater, Ramboll will provide NDEP, the Trust and ETI with a written explanation for the shutdown.
- The release of untreated groundwater due to field activities will be reported to the NDEP 24-hour Spill Notification line, if required by NAC 445A.345 to 445A.348.

EMERGENCY PROJECTS

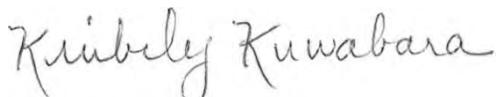

In the event of accidental spill or release that could qualify as an emergency project, Ramboll will prepare an Emergency Project notification for approval by the Trust and NDEP. Upon approval of the Emergency Project status by NDEP, a work plan for cleanup will be prepared and submitted in general accordance with Section 4.7 of the SMP.

REQUEST FOR APPROVAL

This document, including the Work Plan, notifications and contingency plan, provides information required by the SMP for implementation of the dioxin-impacted soil excavation program. Your approval of the Work Plan, notifications and contingency plan is requested and appreciated.

We would appreciate your prompt review of this document. Please contact Kimberly Kuwabara at (510) 420-2525 or kkuwabara@ramboll.com if you have any comments or questions concerning the Work Plan, notifications or contingency plan.

Sincerely,

Kimberly Kuwabara, MS

Notes:

Only detected compounds are shown on the table.

Dioxin TEQ results in italics indicates co-located data from previous soil borings.

Results are presented in milligrams per kilogram (mg/kg) except where indicated.

mg/L = Milligrams per Liter

pg/g = picograms per gram

ND<## = Not Detected at or above laboratory reporting limit shown.

BHC = hexachlorocyclohexane

DDE = Dichlorodiphenyl dichloroethylene

DDT = Dichlorodiphenyl trichloroethane

EFH = Extractable Fuel Hydrocarbons

HCB = Hexachlorobenzene

RCRA = Resource Conservation and Recovery Act

SVOC = Semivolatile Organic Compound

TCLP = Toxicity Characteristic Leaching Procedure

TEQ = Toxicity Equivalent

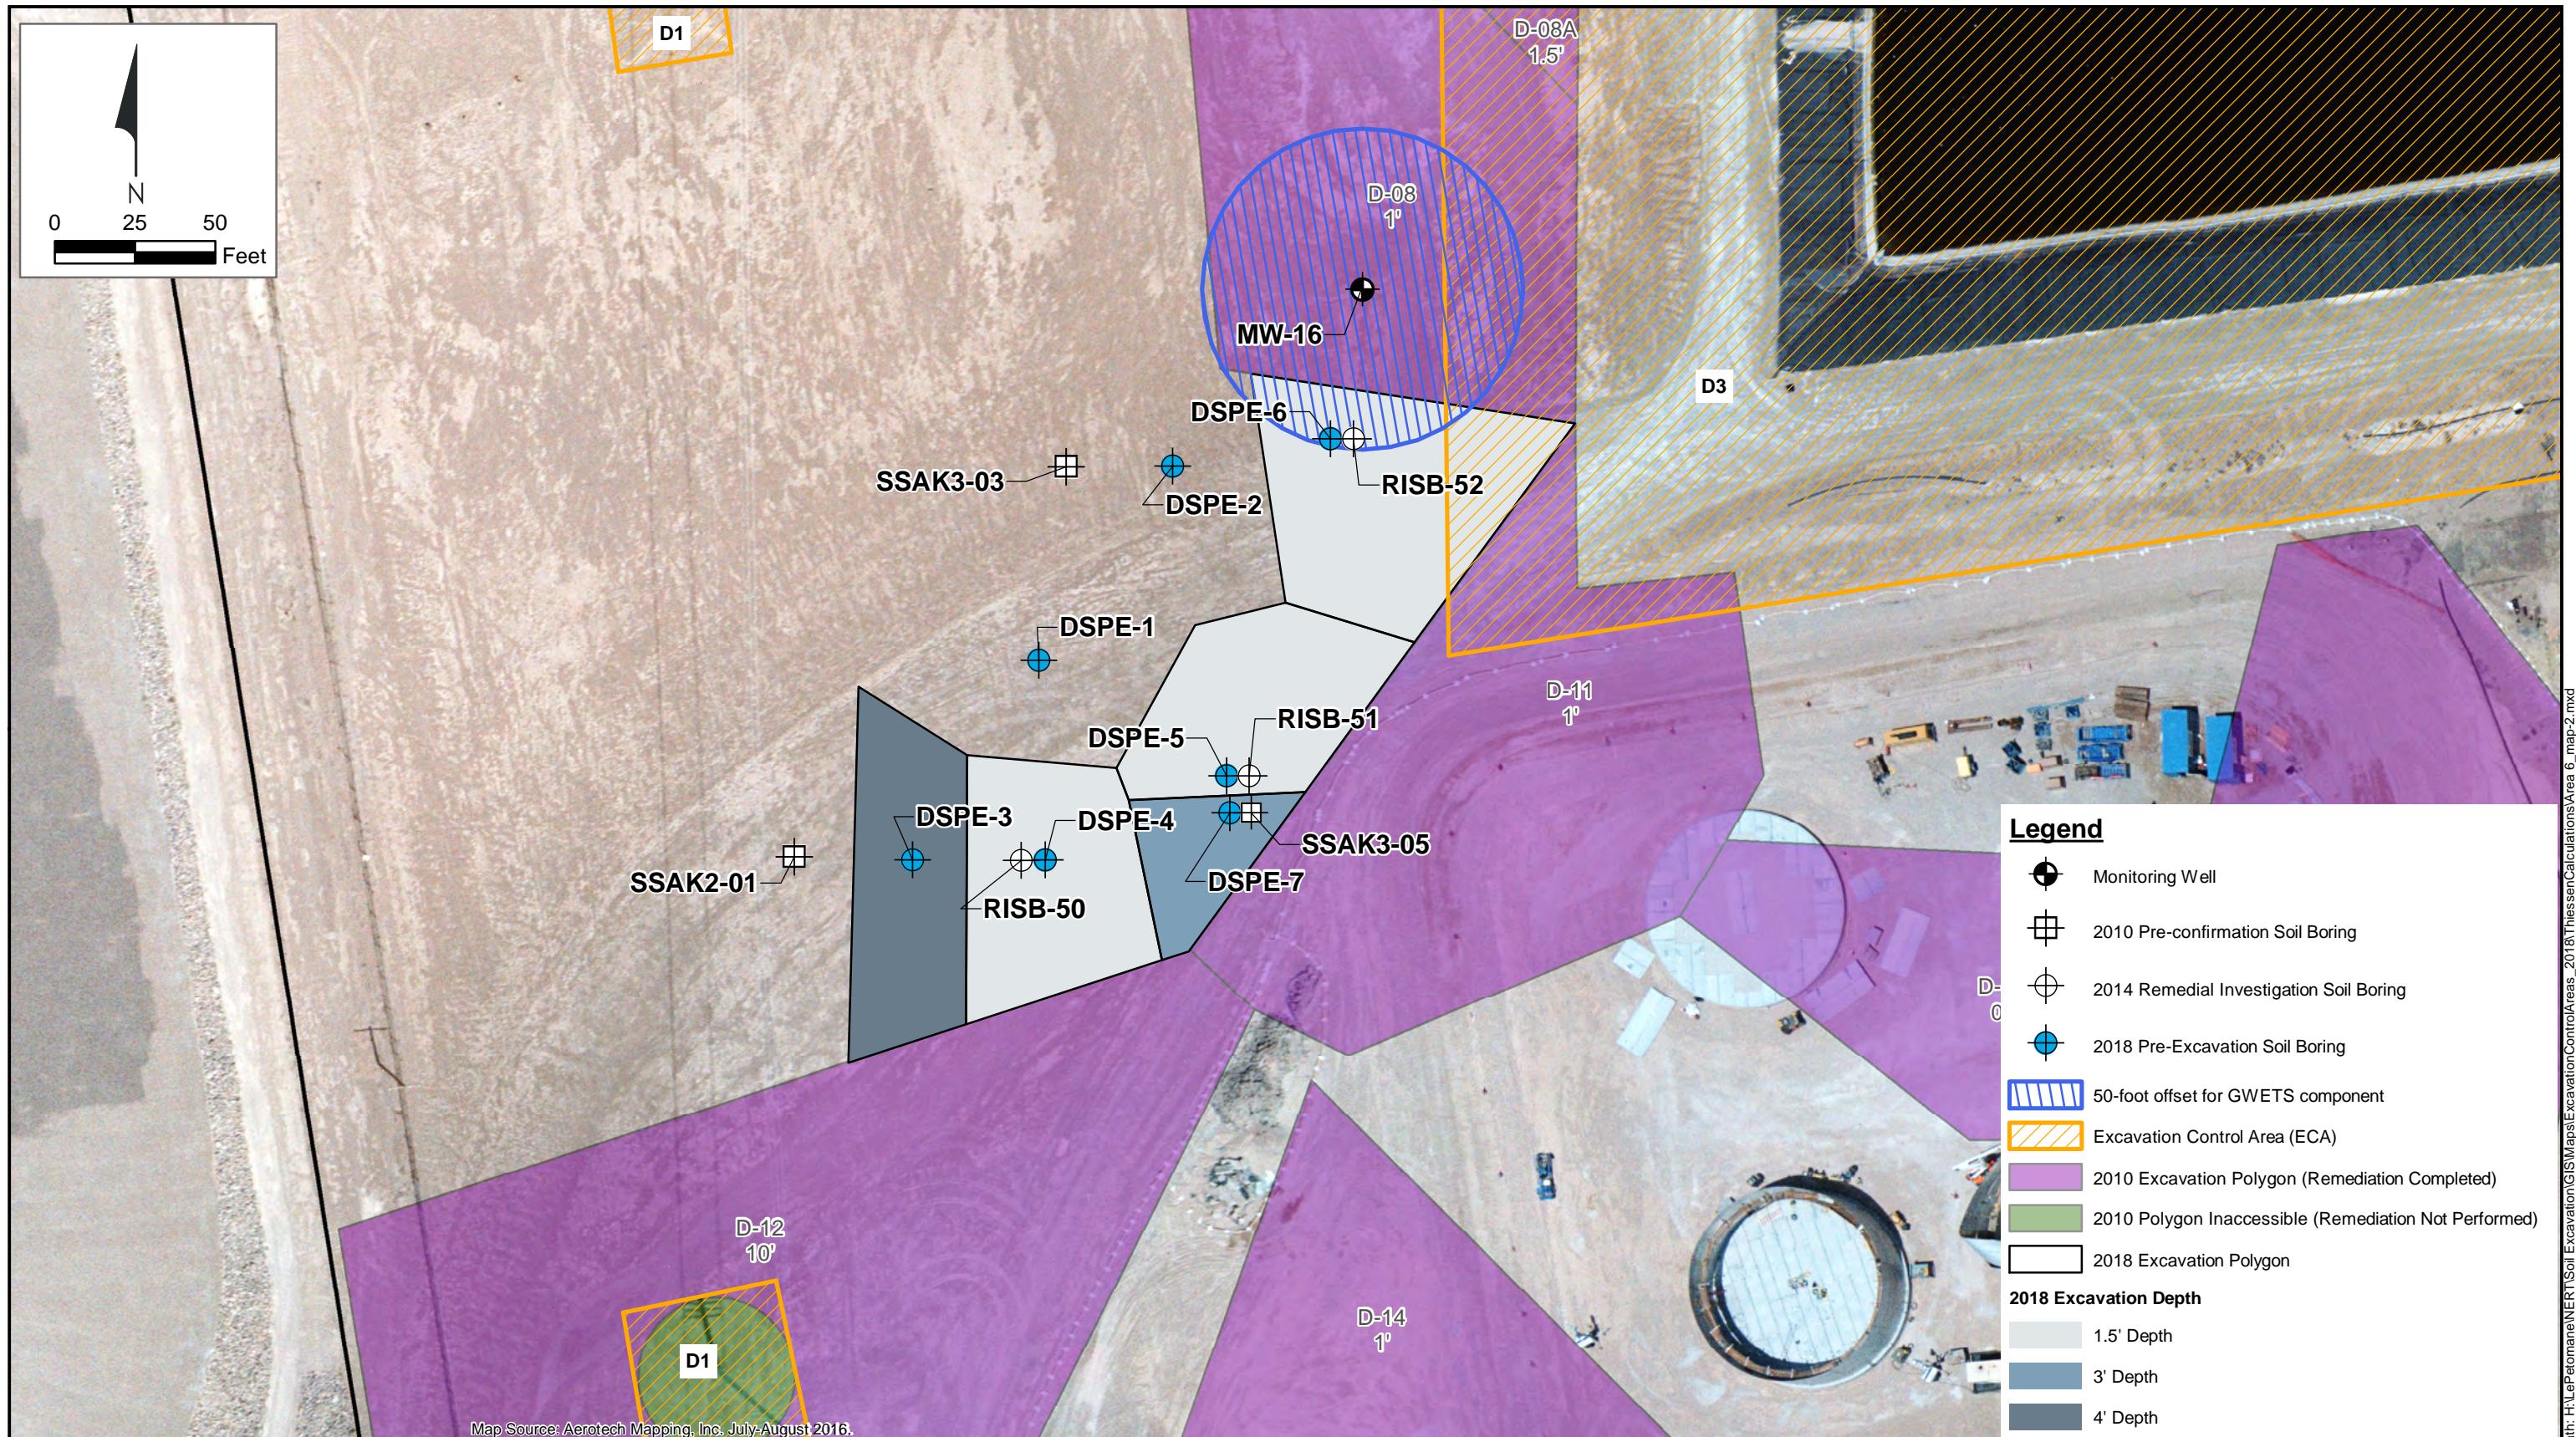

TPH-G, TPH-D, TPH-MO = Total Petroleum Hydrocarbons as Gasoline, Diesel, and Motor Oil

VOC = Volatile Organic Compound

1: Dioxin TEQ calculated based on the World Health Organization (WHO) toxicity equivalency factors (TEFs) scheme (van den Berg et al. 2006). Nondetects were addressed using the Kaplan-Meier approach from USEPA's TEQ calculator.

Van den Berg M. et al. 2006. The 2005 World Health Organization Reevaluation of Human and Mammalian Toxic Equivalency Factors for Dioxins and Dioxin-like Compounds. Toxicology. Science 92:223-241.

Responsible Certified Environmental Manager (CEM) for this Project

I hereby certify that I am responsible for the services described in this document and for the preparation of this document. The services described in this document have been provided in a manner consistent with the current standards of the profession and, to the best of my knowledge, comply with all applicable federal, state and local statutes, regulations and ordinances.

1/7/19

John M. Pekala, PG

Principal

Certified Environmental Manager Ramboll

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 320-43353-1

Comments

No additional comments.

Receipt

The samples were received on 9/20/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.4° C and 5.7° C.

Dioxin

Method(s) 8290: The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): DSPE-3-1.5-20180919 (320-43353-16) and DSPE-4-1.5-20180919 (320-43353-19). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

Method(s) 8290: The concentration of 2,3,7,8-TCDF associated with the following sample exceeded the instrument calibration range: DSPE-3-1.5-20180919 (320-43353-16). This analyte has been qualified; however, the peak(s) did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

Method(s) 8290: The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): DSPE-3-1.5-20180919 (320-43353-16). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: DSPE-1-0.5-20180919 (320-43353-2), DSPE-1-1.5-20180919 (320-43353-4), DSPE-2-0.5-20180919 (320-43353-9), DSPE-2-1.5-20180919 (320-43353-10), DSPE-3-0.5-20180919 (320-43353-14), DSPE-3-1.5-20180919 (320-43353-16), DSPE-4-1.5-20180919 (320-43353-19) and DSPE-5-1.5-20180919 (320-43353-23). The reporting limits (RLs) have been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 320-43353-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 320-43353-2

Comments

Only the standard TAT results are included in this report.

Receipt

The samples were received on 9/20/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.4° C and 5.7° C.

Dioxin

Method(s) 8290: The following sample exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): DSPE-300-0.5-20180919 (320-43353-15). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

Method(s) 8290: The concentration of 2,3,7,8-TCDF associated with the following sample exceeded the instrument calibration range: DSPE-300-0.5-20180919 (320-43353-15). This analyte haas been qualified; however, the peak(s) did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: DSPE-100-0.5-20180919 (320-43353-3) and DSPE-300-0.5-20180919 (320-43353-15). The reporting limits (RLs) have been adjusted proportionately. The samples are associated with preparation batch 320-246867.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 320-43353-3

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 320-43353-3

Laboratory: TestAmerica Sacramento

Narrative

Job Narrative 320-43353-3

Comments

The following sample was removed from hold and requested for analysis per client's 9/27/18 email request: DSPE-3-2.0-20180919 (320-43353-17).

Receipt

The samples were received on 9/20/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.4° C and 5.7° C.

Dioxin

Method(s) 8290: The concentrations of selected analytes associated with the following sample exceeded the instrument calibration range: DSPE-3-2.0-20180919 (320-43353-17). The analytes have been qualified; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

Method(s) 8290: The following sample exhibited elevated noise or matrix interferences for 2,3,7,8-TCDF causing elevation of the detection limit (EDL): DSPE-3-2.0-20180919 (320-43353-17). The reporting limit (RL) for the affected analyte has been raised to be equal to the EDL, and a "G" qualifier applied.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: DSPE-3-2.0-20180919 (320-43353-17). The reporting limits (RLs) have been adjusted proportionately. Sample associated with preparation batch 320-248208.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Mata, Patty

From: Dan Clark <dclark@ramboll.com>
Sent: Thursday, September 27, 2018 10:07 AM
To: Mata, Patty
Subject: RE: Signed work order for NERT Henderson bottle order and courier information

-External Email-

OK, thank you.

Please release the following samples for dioxin analysis on a 1-week rush TAT:

- DSPE-3-2.0-20180919 (this is on the first set of samples)
- DSPE-7-3.0-20180920 (this is on the second set of samples)

Please let me know if there are any questions.

Thanks,
Dan

Subject: RE: Signed work order for NERT Henderson bottle order and courier information

Dan,

The next set of 2 samples are due tomorrow (received on 9/21/18 at the lab) and they are still being analyzed. They should be done tomorrow, but I'm not expecting results today.

Regards,
PATTY MATA
Project Manager

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 320-43353-4

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
G	The reported quantitation limit has been raised due to an exhibited elevated noise or matrix interference
E	Result exceeded calibration range.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Case Narrative

Narrative

Job Narrative 320-43353-4

Comments

The following samples were removed from hold and requested for analysis per client's 10/2/18 email request: DSPE-3-3.0-20180919 (320-43353-18) and DSPE-3-4.0-20180919 (320-43353-27).

Receipt

The samples were received on 9/20/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.4° C and 5.7° C.

Dioxin

Method(s) 8290: The concentration of one or more analytes associated with the following sample exceeded the instrument calibration range: DSPE-3-3.0-20180919 (320-43353-18). These analytes have been qualified; however, the peaks did not saturate the instrument detector. Historical data indicate that for the isotope dilution method, dilution and re-analysis will not produce significantly different results from those reported above the calibration range.

Method(s) 8290: The following samples exhibited elevated noise or matrix interferences for one or more analytes causing elevation of the detection limit (EDL): DSPE-3-3.0-20180919 (320-43353-18). The reporting limit (RL) for the affected analytes has been raised to be equal to the EDL, and a "G" qualifier applied.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: DSPE-3-3.0-20180919 (320-43353-18) and DSPE-3-4.0-20180919 (320-43353-27). The reporting limits (RLs) have been adjusted proportionately. Samples are associated with preparation batch 320-249133.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Mata, Patty

From: Dan Clark <dclark@ramboll.com>
Sent: Tuesday, October 02, 2018 11:10 AM
To: Mata, Patty
Subject: RE: TestAmerica EDD and report files from 320-43353-3 NERT Dioxin Sampling

-External Email-

Patty, to avoid another potential delay, please also analyze DSPE-3-4.0-20180919 for dioxins on a 5-day/ASAP turnaround.

Can you please let me know if it will be possible/likely to see results by Thursday or Friday of this week?

Thanks,
Dan

Subject: RE: TestAmerica EDD and report files from 320-43353-3 NERT Dioxin Sampling

Thanks Patty. Please take DSPE-3-3.0-20180919 off hold and analyze for dioxins on a 1 week TAT (ASAP). It would be best if we can see results this week, by Thursday COB if possible.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Soil Sampling

TestAmerica Job ID: 320-43477-1

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 320-43477-1

Comments

No additional comments.

Receipt

The samples were received on 9/21/2018 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3° C.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volumes used for the following samples deviated from the standard procedure: DSPE-6-1.5-20180920 (320-43477-1) and DSPE-7-1.5-20180920 (320-43477-5). The reporting limits (RLs) have been adjusted proportionately. Samples are associated with preparation batch 320-247944.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True		1
The cooler's custody seal, if present, is intact.	True	258962	2
Sample custody seals, if present, are intact.	N/A		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		15
Sample collection date/times are provided.	True		16
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Soil Sampling

TestAmerica Job ID: 320-43477-2

Qualifiers

Dioxin

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 320-43477-2

Comments

The following sample was removed from hold and requested for analysis per client's 9/27/18 email request: DSPE-7-3.0-20180920 (320-43477-7).

Receipt

The samples were received on 9/21/2018 9:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.3° C.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

Method(s) 8290: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: DSPE-7-3.0-20180920 (320-43477-7). The reporting limits (RLs) have been adjusted proportionately. Sample associated with preparation batch 320-248208.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Mata, Patty

From: Dan Clark <dclark@ramboll.com>
Sent: Thursday, September 27, 2018 10:07 AM
To: Mata, Patty
Subject: RE: Signed work order for NERT Henderson bottle order and courier information

-External Email-

OK, thank you.

Please release the following samples for dioxin analysis on a 1-week rush TAT:

- DSPE-3-2.0-20180919 (this is on the first set of samples)
- DSPE-7-3.0-20180920 (this is on the second set of samples)

Please let me know if there are any questions.

Thanks,
Dan

Subject: RE: Signed work order for NERT Henderson bottle order and courier information

Dan,

The next set of 2 samples are due tomorrow (received on 9/21/18 at the lab) and they are still being analyzed. They should be done tomorrow, but I'm not expecting results today.

Regards,
PATTY MATA
Project Manager

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True		1
The cooler's custody seal, if present, is intact.	True	258962	2
Sample custody seals, if present, are intact.	N/A		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		15
Sample collection date/times are provided.	True		16
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 9/20/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270C: The percent recovery of Benzidine in the laboratory control sample (LCS) for preparation batch 440-500904 and analytical batch 440-500988 was below the acceptance limits. Per the EPA method, this compound is subject to oxidative loss during sample preparation and as a consequence yields erratic recoveries.

Method(s) 8270C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 440-500904 and analytical batch 440-500988 were outside control limits. Sample matrix interference is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) 8260B: Please note that Methylene chloride and Acetone are common laboratory solvents and low level detections of these compounds in samples may be due to laboratory exposure.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: Hydrocarbon results were partly due to individual peaks in quantitation range for the following samples: DSPE-4-0.0-20180919 (440-220519-1) and DSPE-4-1.0-20190919 (440-220519-2). The sample chromatograms did not display the standard DRO or ORO patterns.

Method(s) 8081A: The continuing calibration verification (CCV) associated with batch 440-501443 recovered above the upper control limit for Methoxychlor. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

Method(s) 8081A: Surrogate recoveries for the following samples were outside control limits: DSPE-4-0.0-20180919 (440-220519-1), DSPE-4-1.0-20190919 (440-220519-2) and DSPE-5-0.0-20180919 (440-220519-3). Evidence of matrix interference is present; therefore, re-extraction and re-analysis was not performed.

Method(s) 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for selected analytes in preparation batch 440-501153 and analytical batch 440-501443 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recoveries were within acceptance limits.

Method(s) 8081A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for selected analytes in preparation batch 440-502340 and analytical batch 440-502496 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 7470A: The calibration plot for data package for analytical batch 440-500999 can not be provided due to instrument software limitations. The calibration plot must be printed out immediately after the calibration has been analyzed; it cannot be regenerated once a second calibration is analyzed. However, the concentration and instrument responses for the ICAL points are listed in the raw data

Case Narrative

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 440-220519-1

Job ID: 440-220519-1 (Continued)

Laboratory: TestAmerica Irvine (Continued)

provided and results reported are based on these data. The following sample is associated: DSPE-4-0.0-20180919 (440-220519-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 440-220519-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
X	Surrogate is outside control limits
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

List Number: 1

Creator: Bonta, Lucia F

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True		1
The cooler's custody seal, if present, is intact.	True		2
Sample custody seals, if present, are intact.	N/A	Not Present	3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		
Containers are not broken or leaking.	True		
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	N/A		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Laboratory: TestAmerica Irvine

Narrative

Job Narrative 440-220623-1

Comments

No additional comments.

Receipt

The samples were received on 9/21/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.9° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270C: The percent recovery of Benzidine in the laboratory control sample (LCS) for preparation batch 440-500904 and analytical batch 440-500988 was below the acceptance limits. Per the EPA method, this compound is subject to oxidative loss during sample preparation and as a consequence yields erratic recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA

Method(s) 8015B: The continuing calibration verification (CCV) associated with batch 440-501158 recovered above the upper control limit for GRO (C4-C12). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: DSPE-7-0.0-20180920 (440-220623-3), DSPE-7-1.0-20180920 (440-220623-4).

Method(s) 8015B: Surrogate recovery for the following batch QC sample was outside control limits: (440-220559-A-1 MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The method blank for preparation batch 440-500922 and analytical batch 440-501057 contained C10 - C40 above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and re-analysis of samples was not performed.

Method(s) 8081A: Surrogate recovery for the following samples was above control limits: DSPE-6-0.0-20180920 (440-220623-1) and DSPE-6-1.0-20180920 (440-220623-2). Evidence of matrix interference due to high target analytes is present for Decachlorobiphenyl surrogate; therefore, re-extraction and re-analysis was not performed. Second surrogate Tetrachloro-m-xylene recoveries were within limits, demonstrating that extraction process was in control.

Method(s) 8081A: The continuing calibration verification (CCV) associated with batch 440-501443 recovered above the upper control limit for Methoxychlor. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
*	LCS or LCSD is outside acceptance limits.

GC VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
E	Result exceeded calibration range.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
F2	MS/MSD RPD exceeds control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Login Sample Receipt Checklist

Client: Ramboll US Corporation

Job Number: 440-220623-1

Login Number: 220623

List Source: TestAmerica Irvine

List Number: 1

Creator: Bonta, Lucia F

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	N/A	Not Present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

Only the additional TCLP SVOC results, requested per client's 10/3/18 email, are included in this report.

Receipt

The samples were received on 9/20/2018 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9° C.

GC/MS Semi VOA

Method(s) 8270C: The matrix spike (MS) recovery for Nitrobenzene in the following sample associated with leach batch 440-502802, preparation batch 440-504020 and analytical batch 440-504949 was outside control limits: (440-220519-B-1-F MS). The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Client: Ramboll US Corporation
Project/Site: NERT Dioxin Sampling

TestAmerica Job ID: 440-220519-2

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Subject: RE: TestAmerica report files from 440-220519-1 NERT Dioxin Sampling

-External Email-

Please run TCLP extraction on DSPE-4-0.0-20180919 and analyze for the SVOC hexachlorobenzene, standard TAT.

Thanks,
Dan

Subject: TestAmerica report files from 440-220519-1 NERT Dioxin Sampling

Hello,

Attached please find the report files for job 440-220519-1; NERT Dioxin Sampling. Results are for the non-dioxin test suite.

Please feel free to contact me if you have any questions.

Thank you.

Please let us know if we met your expectations by rating the service you received from TestAmerica on this project by visiting our website at: [Project Feedback](#)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 320-43353-5

Comments

Client requested TCLP metals and TCLP SVOC tests to be performed on sample DSPE-3-1.5-20180919 (320-43353-16) per client's 10/2/18 email. Only the additional test results are included in this report.

Receipt

The samples were received on 9/20/2018 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 5.4° C and 5.7° C.

GC/MS Semi VOA

Method(s) 8270C: Surrogate recovery for the following samples were outside the upper control limit: DSPE-3-1.5-20180919 (320-43353-16), (LB 320-250595/1-D), (LCS 320-251628/2-A), (LCSD 320-251628/3-A) and (MB 320-251628/1-A). The method blank (MB) and the leachate blank (LB) were non-detect for all target analytes. The target analyte recoveries for the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were within control limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The leachate blank (LB) for preparation batch 320-250973 contained Barium greater than the method detection limit (MDL) but less than the reporting limit (RL). The associated sample was not re-analyzed because the LB detection was below the RL. The data have been qualified and reported.

Method(s) 6010B: The instrument blank (ICB) for analytical batch 320-252125 contained Lead greater than the reporting limit (RL), but was not re-analyzed because the sample result was non-detect (ND). The data have been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3510C / 8270C-TCLP: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with leach batch 320-250595 and preparation batch 320-251628. The laboratory control sample (LCS) was performed in duplicate to provide precision data for the batch.

Method(s) 3510C / 8270C-TCLP: The following sample was prepared outside of 14-day TCLP preparation holding time due to the method being requested after the hold time had expired: DSPE-3-1.5-20180919 (320-43353-16).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

To: Mata, Patty
Subject: RE: question for 440-320-43353-4 NERT Dioxin Sampling

-External Email-

Please proceed with the extraction for TCLP SVOCs and RCRA8 metals, using less than 100g and noting in the report. Standard TAT.

Dan

To: Dan Clark
Subject: RE: question for 440-320-43353-4 NERT Dioxin Sampling

Dan,

The TCLP method requires 100 grams to be extracted. We could extract less, but we would have to note this in the case narrative. The SVOC extraction hold time is 14 days and the metals TCLP extraction is 28 days (for Mercury).

Subject: question for 440-320-43353-4 NERT Dioxin Sampling

-External Email-

Hi Patty, got a question about DSPE-3-1.5-20180919, this is one of the samples intended just for dioxins. Would there be sufficient volume remaining in this sample for a TCLP extraction? A micro-extraction would be OK. We may want to run a TCLP SVOCs and TCLP RCRA8 metals if we have sufficient volume.

Thanks,

Dan
