Notes:
a. Non-detected results presented as the sample quantitation limit, except for VOC and SVOC analytes from 2006, which are presented as practical quantitation limits. Sample quantitation limits not available for these results at the time of this analysis.
b. The detection flag for radionuclides indicates whether the measured concentration is below the minimum detectable concentration. All radionuclides were treated as detections for the analysis.

Notes:
All units are mg/kg
Operations area consists of DU-1, DU-2 and DU-2.
Individual dioxin and furan results for non-detected congeners presented as 1/2 sample quantitation limit
Dioxin TEQs were calculated using the results for dioxins, furans, and dioxin-like PCBs and the World Health Organization (WHO) toxicity equivalency factors (TEFs) scheme for mammals and avian receptors presented in USEPA (2008), originally derived in Van den Berg et al. (1998) and van den Berg et al. (2006).
Detections are presented as 1 (detected concentration) or 0 (nondetected concentration).

D/F: Dioxin and Furan
DU = Decision Unit
mg/kg: Milligrams per kilogram
ND: Not detected
PCB: Polychlorinated biphenyl
TEF: Toxic equivalency factor
TEQ: Toxic equivalency quotient

Notes:
Units are mg/kg
Operations area consists of DU-1, DU-2 and DU-2.
Calculation of homolog concentrations presented in Table D-4a.
Non-detect homolog results presented as 1/2 the sample quantitation limit.
Percent homolog composition for commercial Aroclors are presented in Fuchsman et al. 2006, originally derived in DeVoogt and Brinkman 1989.
Aroclor concentrations calculated by multiplying the percent composition by the homolog concentration, followed by summation of the products.
Detections are presented as 1 (detected concentration) or 0 (nondetected concentration).

CASRN = Chemical Abstract Service Registration Number
DL = Detection limit
DU = Decision Unit
mg/kg = Milligrams per kilogram
ND = Not detected
PCB = Polychlorinated biphenyl
