NDEP – TRX Meeting
Phase B Work Plan

EA08 – Discussion Points

General Comment: Wet Chemistry in Table 1-1 footnote 1, refers reviewer to Upgradient Report, why not list the analytes in this table instead of referring to another document?

LOU 21

- “Cathode wash water” – analytical data available? Electrolytic process can form SVOCs, PAHs, PCBs, dioxins/furans

LOU 24

- “Conveyance facilities” – What information is know on the location of these facilities?
- “demolition debris” – What does this consist of? Is asbestos probable?
- “leach beds” – implies acids. Should wet chemistry be analyzed (pH, Rads, etc.)
- Tailings sample collected but no sample representative of LOU was collected?
- Explain why this area is hatched on the map. Is extent known?

LOU 33

- Explain how proposed boring is related to LOU 33
- What is the depth and configuration of the sump?
- Add wet chemistry?
- How is LOU 34 related to LOU 33? (Comments state that one boring will be advanced to characterize both LOUs)

LOU 34

- Same comments as LOU 33.
- No boring in EA08 – does TRX expect tailing to be the same (same source)?

LOU 37

- How does Phase A boring relate to this LOU?
- Pathway to basement?

LOU 40

- Any confirmation samples?
- Phase A boring (SA33) not representative of the LOU.
- PCBs not proposed for analysis. Why?

LOU 43

- Unit Building 5 is in EA08 (Unit Building 4 is in EA09)
- Any documentation on the electrolytic wastes/sludge (disposal location, analytical data)?
- Why is only SA32 listed as proposed for asbestos sampling but not SA33 and SA34?

LOU 44

- Additional boring to the east of the Unit Building for delineation

LOU 46

- How was the location for SA107 determined (topography, wash, etc)?

LOU 47

- Are SA37 and SA38 representative of the ore piles?
- Is each of the four piles from the same sources?

LOU 48

- SA36 should be put in LOU instead of between

LOU 49 and 50

- Why is there no sample in the LOU? Why would SA13 be considered the worst case?

LOU 51

- Are there any details on construction, depth, etc. for lines?

LOU 61

- What is the basis for the asbestos sampling locations?

US Vanadium

- What is the justification for the location of the former US Vanadium facility?
- Are there any additional radionuclides expected?
- What was used in the production of tungsten?
