Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

Name of Facility:

Satellite Accumulation Point, Ammonium Perchlorate (AP) Maintenance Shop

Goal of Closure:

- Continuation of current use – regulatory closure not presently requested.

Site Investigation Area:

- Size: Two areas, both approximately 20 feet by 20 feet.
- Location:
  - The Satellite Accumulation Point Area is located in the southeast portion of the AP Maintenance Shop building, and
  - The Product Storage Area is located approximately 45 feet west of the AP Maintenance Shop building.
- Current Status/Features: Both the Satellite Accumulation Point Area associated with the AP Maintenance Shop and the nearby Product Storage Area are currently active.

Description:

- LOU 39 consists of: a Satellite Accumulation Point Area in the AP Maintenance Shop building where hazardous waste materials including a solvent-based parts washer were located and a Product Storage area west of the AP Maintenance Shop building [Ref. 3].
- The Satellite Accumulation Point Area is located on a concrete floor in the AP Maintenance Shop building [Ref. 3].
- From 1989 (when the AP Maintenance Shop became operational) until 1993, 1,1,1-trichloroethane (1,1,1-TCA) was used in the parts washer to remove oil and grease from mechanical parts. Waste from the parts washer contained a mixture of oil and grease sludge as well as 1,1,1-TCA. Waste material was placed into drums that were stored next to the washer. In 1993, the use of 1,1,1-TCA in the parts washer was permanently discontinued [Ref. 3].
- The Product Storage Area is located approximately 45 feet west of the Maintenance Shop. From 1989 to 1993, new drums of 1,1,1-TCA were stored on the concrete pad of the storage area. During this period, drums containing waste from the parts washer were also stored in this area, but on bare soil adjacent to the concrete pad. [Ref. 3].
- During the 1991 Site inspection, no cracks were observed in the concrete floor at the Satellite Accumulation Point Area in the AP Maintenance Shop. Minor drips below the parts washer and a minor soil stain in the Product Storage Area were observed [Ref. 3].

Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

- Visibly stained soil was removed and sampled in April 1997. The volume of excavated soil and disposition of the soil are unknown [Ref. 1].

Process Waste Streams Associated with LOU 39	Known or Potential Constituents Associated with LOU 39
Oil and grease sludge containing 1,1,1-TCA from the parts washer, and waste materials from the Satellite Accumulation Point Area.	• Metals • Perchlorate • Wet chemistry analytes • VOCs (1,1,1-TCA) • TPH (oil and grease)

Overlapping or Adjacent LOUs:

The following LOUs overlap or are adjacent to LOU 39:

Overlapping LOUs

- None

Adjacent LOUs

- LOU 38 (Former Satellite Accumulation Point-AP Laboratory) is west of LOU 39.
- LOU 5 (Beta Ditch) is north (downgradient) of LOU 39.
- LOU 57 (AP Plant Transfer Lines to Sodium Chlorate Process and Ponds) is northwest of LOU 39.

LOU 38 is cross gradient to LOU 39 and LOUs 5 and 57 are downgradient and are not considered to affect LOU 39; therefore, no additional chemical classes have been added to the proposed Phase B Analytical Plan for LOU 39.

For detailed information on the LOUs listed above, please refer to the specific LOU data package.

Other LOUs Potentially Affecting Soils in LOU 39:

- None

Known or Potential Chemical Classes:

- Metals
- Perchlorate
- Wet chemistry analytes
- VOCs
- TPH-DRO/ORO

Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

Known or Potential Release Mechanisms:

- Possible impacts to surrounding soils from surface releases.
- Minor spills in the Product Storage Area are indicated by the stained surface soil [Ref. 3].

Results of Historical Sampling:

- In April 1997, stained soil in the Product Storage area was removed (volume unknown) and sampled (sample S8-1S). TPH Diesel-Range Organics and Oil-Range Organics were detected in sample S8-1S. Additional soil was removed and re-sampled (sample S8-1RE) with TPH being not detected [Ref. 1]. Analytical results are summarized: LOU 39 Table 1 (see attached).

Did Historical Samples Address Potential Release?

- Yes, but only in the Product Storage Area.

Summary of Phase A SAI:

Soil

- None specifically conducted for this LOU [Ref. 2].

Groundwater

- None specifically conducted for this LOU [Ref. 2]

Are Phase A Sample Locations in "Worst Case" Areas?

- No

Is Phase B Investigation Recommended?

- Yes

Proposed Phase B Soil Investigation/Rationale:

- The Phase B investigation of LOU 39 consists of collecting soil samples from two (2) locations:
  - one (1) boring will be drilled adjacent to the Satellite Accumulation Point Area, and
  - one (1) boring will be drilled adjacent to the Product Storage Area.
  - All two borings along with the analytical program to evaluate soil samples from LOU 39 are listed on **Table A – Soil Sampling and Analytical Plan for LOU 39.**
- Soil sample locations consist of both judgmental and randomly placed locations.
- Judgmental sample locations:
  - Are designed to evaluate soil for known or potential chemical classes associated with LOU 39, based on the known process waste streams;

Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

  - One (1) sample location (SA87) is a Judgmental location.
- Random sample grid locations:
  - Are designed to assess whether unknown constituents associated with LOU 39 are present.
  - One (1) sample location (RSAN4) is a randomly-placed location.

Proposed Phase B Constituents List for Soils:

Judgmental sample locations will be analyzed for LOU-specific constituents consisting of the following:

- Metals (Phase A list)
- Perchlorate
- Wet chemistry analytes
- VOCs
- TPH-DRO/ORO

Judgmental sample locations will also be analyzed for the following constituents for area-wide coverage purposes:

- Hexavalent chromium
- Radionuclides
- Dioxins/furans
- Asbestos

Random sample grid locations will be analyzed for the following full list of Phase A site related chemicals for LOU-specific and area-wide coverage purposes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- TPH-DRO/ORO
- Organochlorine pesticides
- Dioxins/furans
- Radionuclides
- Asbestos

Proposed Phase B Groundwater Investigation/Rationale:

- The Phase B groundwater investigation of LOU 39 consists of collecting groundwater samples from three (3) locations to evaluate local groundwater conditions and as part of site-wide evaluation of constituent trends in groundwater.

Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

- Two (2) wells (M-142 and M-128) south (upgradient) of LOU 39 will be sampled.
- One (1) well (M-14A) north (downgradient) of LOU 39 will be sampled.
- All three wells along with the analytical program to evaluate groundwater samples associated with LOU 39 are listed **on Table B – Groundwater Sampling and Analytical Plan for LOU 39.**

Proposed Phase B Constituents List for Groundwater:

Groundwater samples will be analyzed for the following analytes:

- Metals (Phase A list)
- Hexavalent chromium
- Perchlorate
- Wet chemistry analytes
- VOCs
- SVOCs
- Organochlorine pesticides
- Radionuclides

Proposed Phase B Soil Gas Investigation/Rationale:

One (1) soil gas sample will be collected to evaluate area conditions for the presence of vapor-phase VOCs in the vadose zone.

- SG30 will be located adjacent to soil boring SA87 to investigate satellite accumulation and AP maintenance shop as a potential VOC source.

Details of the soil gas sampling program are contained in the NDEP-approved (March 26, 2008) Soil Gas Survey Work Plan, Tronox LLC, Henderson, Nevada, dated March 20, 2008.

Proposed Phase B Constituents List for Soils Gas:

- VOCs (EPA TO-15)

Notes:

X Sample will be collected and analyzed.
No sample collected under Phase B sampling program.
TPH-DRO/ORO Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
1. Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
2. Includes wet chemistry parameters listed on Table 1 of the Phase B Source Area Work Plan.
3. Organochlorine Pesticides (includes analysis for hexachlorobenzene).
4. Semi-volatile Organic Compounds
5. Radionuclides consists of alpha spec reporting for Thorium-230/232, Uranium 234/235, Uranium-238, and beta spec for Radium-226/228 (per NDEP).
6. Dioxins/furans: 90% will be tested by immunoassay, 10% analyzed by HRGC/HRMS in the laboratory.

Soil and Groundwater Characterization Data

Summary of Available Data for LOU 39 – Satellite Accumulation Point, AP Maintenance Shop

Tronox Facility – Henderson, Nevada

LOU-specific analytes identified include:

- Wet chemistry analytes
- Dioxins/furans
- Metals
- Organochlorine pesticides
- Perchlorate
- Radionuclides
- TPH
- VOCs
- Asbestos

The table below presents historical data associated with the LOU-specific analytes listed above. There is no Phase A data associated with this LOU.

LOU 39 – Table 1 – Summary of Historical Soil Analytical Data – TPH

Notes for Phase A Data Tables
Tronox Facility - Henderson, Nevada

Blank	Not analyzed.
Bold	Bold values are constituents detected above the laboratory sample quantitation limit.
Gray	Grayed out values are non-detected values with the laboratory sample quantitation limits shown.
B	The result may be a false positive totally attributable to blank contamination.
D	Dissolved Metals.
DO	Dissolved Oxygen.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J-	The result is an estimated quantity and the result may be biased low.
J+	The result is an estimated quantity and the result may be biased high.
J+	The result is an estimated quantity and the result may be biased high.
JB	The result may be biased high partially attributable to blank contamination.
JK	The result is an estimated maximum possible concentration.
R	The result was rejected and unusable due to serious data deficiencies. The presence or absence of the analyte cannot be verified.
S	Soluable metals
T	Total Metals.
U	The analyte was analyzed for, but was not detected above the laboratory sample quantitation limit.
UJ	The analyte was not detected above the laboratory sample quantitation limit and the limit is approximate.
mg/kg	Milligrams per kilogram.
mg/L	Milligrams per liter.
ml/min	Milliliters per minute.
ng/kg	Nanogram per kilogram.
nm	Not measured.
NTUs	Nephelometric Turbidity Units.
ORP	Oxidation-reduction potential.
pCi/g	PicoCuries per gram.
pci/L	PicoCuries per liter.
s/gPM10	Revised protocol structures per gram PM10 fraction dust.
TEF	Toxic Equivalency Factor.
TEQ	Toxic Equivalent Concentration
ug/kg	Micrograms per kilogram.
ug/L	Micrograms per liter.
umhos/cm	MicroSiemens per centimeter.
L	Sample ID suffix indicating the sample was collected using low low-flow pumping rates (100-150 ml/min).
F	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min) and field filtered.
Z	Sample ID suffix indicating the sample was collected using low-flow pumping rates (150-480 ml/min).
*	No analytical data is available for this sample due to a laboratory error.
(a)	Calculated assuming 0 for non-detected congeners and 2006 toxic equivalency factors (TEFs).
(b)	Calculated assuming 1/2 detection limit as proxy for non-detected congeners and 2006 TEFs.
