Appendix B

Revised Table 2 and Table 3 for Areas I, II, III, and IV

Area I

Table 2
Soil Sampling and Analytical Plan for Area I
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

					Laboratory :	CAS - Kelso, WA				CAS - Rochester, NY								CAS - Houston		GEL Charleston, SC	STL-Denver	Alpha Analytical Sparks, NV	EMSL Westmont, NJ	Rationale for removal of samples from SAP	Location Description and Characterized Area Rationale (NDEP may not agree with upgradient and downgradient designations).
Grid Location	LOU Number	Boring No.	Date Sampled	Sample ID Number, (note "B" for Phase B)	Sample Depths[1.] (ft, bgs)	Perchlorate (EPA 314.0)	Metals[2.] (EPA 6020)	Hex Cr[4.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH-GRO (EPA 8015B)	VOCs[3.] (EPA 8260B)	Wet Chem[5.]	Total Cyanide (EPA 9012A)	Formal-dehyde (EPA 8315A)	OCPs[6.] (8081A)	SVOCs[7.] (EPA 8270C)	PCBs[10.] (EPA 8082)	PCBs[10.] (EPA 1668)	Dioxins/ Furans[9.]	Radio-nuclides[8.]	OPPs[13.]	Organic Acids[14.]	Asbestos[11.] EPA/540/R-97/028		
Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area 1 (H-3) and ending with the southeastern most grid in Area I (O-4).																									
H-3	1, 10	RSAH3		RSAH3-0.0	0.0																		X		Boring located to evaluate LOU 1 (former Trade Effluent Settling Ponds) and as an
H-3	1, 10			RSAH3-0.5B	0.5	X	X	X	X		X	X	X		X	X			X	X	X	X		F,L	eastward step-out to LOU 10 (Former Onsite Hazardous Waste Landfill).
H-3	1, 10			RSAH3-10B	10	X	X	X	X		X	X	X		Hold	X				X				L	GW anticipated at ~34 feet bgs; MCfg ~129 feet bgs.
H-3	1, 10			RSAH3-20B	20	X	X	X	X		X	X	X		Hold	X				X				B,D,L	
H-3	1, 10			RSAH3-30B	30	R	R	R	R		R	R				R				R				B	
H-3	1, 10			RSAH3-32B	32	X	X	X	X		X	X	X		X	X				X	X	X		B,D,F,L	
I-2	1, 10	RSAI2		RSAI2-0.0	0.0																		X		Boring located to evaluate LOU 1 (former Trade Effluent Settling Ponds) and as an

NOTES:

n/a	Not applicable - boring is not associated with a specific LOU but is located to evaluate soil for general area-wide coverage.
X	Sample will be collected and analyzed.
	Blank cell indicates no sample collected under Phase B sampling program.
X	Sample for asbestos analysis was collected in June 2008.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO/ORO	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00±0.05), and 2) with extraction method #3 (reagent water); per NDEP.
NS	Not sampled.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, Zinc
3.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
4.	Hexavalent Chromium
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997).
11.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
12.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854, Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).
13.	Organophosphorous Pesticides
14.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.

Table 2
Soil Sampling and Analytical Plan for Area I
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

					Laboratory :	CAS - Kelso, WA				CAS - Rochester, NY								CAS - Houston		GEL Charleston, SC	STL-Denver	Alpha Analytical Sparks, NV	EMSL Westmont, NJ	Rationale for removal of samples from SAP	Location Description and Characterized Area Rationale (NDEP may not agree with upgradient and downgradient designations).
Grid Location	LOU Number	Boring No.	Date Sampled	Sample ID Number, (note "B" for Phase B)	Sample Depths[1.] (ft, bgs)	Perchlorate (EPA 314.0)	Metals[2.] (EPA 6020)	Hex Cr[4.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH-GRO (EPA 8015B)	VOCs[3.] (EPA 8260B)	Wet Chem[5.]	Total Cyanide (EPA 9012A)	Formal-dehyde (EPA 8315A)	OCPs[6.] (8081A)	SVOCs[7.] (EPA 8270C)	PCBs[10.] (EPA 8082)	PCBs[10.] (EPA 1668)	Dioxins/ Furans[9.]	Radio-nuclides[8.]	OPPs[13.]	Organic Acids[14.]	Asbestos[11.] EPA/540/R-97/028		
15.		Asbestos samples are to be collected from 0-2 inches bgs.																						
X		Green-shading indicates items that have been added or changed from Table 2 in the June 2008 Area I Work Plan originally reviewed by NDEP.																						
R		"R" indicates that soil sample, location, or depth has been removed and will not be analyzed for the specific analyte class, per communication with NDEP (September 8, 2008)																						

Rationale Codes

A	The soil sample was removed from the sampling plan because the 2008 groundwater data indicates that the water table is likely above or at this depth.
B	Tronox has chosen to increase the interval between sample depths as discussed with NDEP (October 1, 2008). Soil samples will be collected at the following depths: 0 to 2-inches (asbestos only), 0.5-ft, 10-ft, and the capillary fringe (2-ft above the water table). Additional samples will be collected if the vertical distance between samples exceeds 20-ft (sample depth will be rounded-off to the closest 5-ft interval). Unless otherwise indicated, soil samples will not be collected at 20, 30 or 40-ft.
C	PCB Aroclor or Aroclor and congener analyses were added to the boring sampling plan per NDEP (May 6, 2008 or July 21, 2008)
D	OCP analysis was added to boring sampling plan per NDEP (May 6, 2008 or July 21, 2008)
E	OCP analysis was removed from boring sampling plan per TRX errata submittal (December 19, 2008)
F	Organophosphorus Pesticides (OPP) and Organic Acids (OA) analyses were added per NDEP (July 21, 2008)
G	Additional boring added per NDEP (May 6, 2008). Sampling plan for boring is consistent with represented LOU packages
H	Boring removed from sampling plan.
I	TPH-DRO/ORO and/or TPH-GRO added per NDEP (May 6,2008)
J	PCB Aroclor or Aroclor and congener analyses were removed from boring sampling plan per TRX erratta submittal (December 19, 2008)
K	Boring already advanced and sampled
L	Cyanide analysis added to boring sampling plan per NDEP (July 21, 2008)
M	Cyanide analysis added by TRX
N	Depth extended to capillary fringe per NDEP (May 6, 2008)
O	SVOC analysis was added to boring sampling plan per NDEP (May 6, 2008)
P	PCB analysis was not performed because the soil sample was not collected. PCB analyses was added to the boring sampling plan per NDEP (July 21, 2008), however, boring was drilled prior to July 21, 2008.

NOTES:

n/a	Not applicable - boring is not associated with a specific LOU but is located to evaluate soil for general area-wide coverage.
X	Sample will be collected and analyzed.
	Blank cell indicates no sample collected under Phase B sampling program.
X	Sample for asbestos analysis was collected in June 2008.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO/OI	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00±0.05), and 2) with extraction method #3 (reagent water); per NDEP.
NS	Not sampled.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, Zinc
3.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
4.	Hexavalent Chromium
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997).
11.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
12.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854, Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).
13.	Organophosphorous Pesticides
14.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
15.	Asbestos samples are to be collected from 0-2 inches bgs.

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007). ENSR is in the process of obtaining screen interval information from BMI.
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, Zinc
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene).
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters is shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).
7.	SVOCs = Semi volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides
TBD	To Be Determined when well is constructed.
nr	Not recorded in Tronox database (screen intervals to be acquired from BMI).
Qal	Quaternary Alluvium.
6/25/2008	Yellow indicates sample was collected on the date shown.
MS/MSD	Matrix Spike sample and Matrix Spike Duplicate sample (fill 2nd set of bottles for MS sample and 3rd set of bottles for MSD sample).
MCfg1	Muddy Creek Formation - first fine-grained facies.
X	Green-shading indicates items that have been added or changed from Table 3 in the April 2008 Area I Work Plan originally reviewed by NDEP.
A	Sample ID was added to convey sample ID nomenclature to field sampling team ("B" suffix denotes sample is associated with Phase B).
B	Soil type column was added to conform with NDEP request.
D	Laboratory information was added to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.
E	PCB columns were added per NDEP (May 6, 2008).
F	OPPs and Organic Acids were added per NDEP (July 21, 2008).
G	Well was added to Table 3 per NDEP (May 6 , 2008).
H	Screen interval was added to Table 3 after this well was drilled and installed in July 2008.
J	Column was added by Tronox because it was unclear in previous tables that cyanide will be analyzed in all proposed wells. Cyanide is conducted as part of the Wet Chemistry analysis.
K	For screen intervals marked as "TD=", total well depth is given where screen interval is not known. A downhole camera will be used to determine actual screen intervals.
M	Based on Phase A results, these locations were selected for PCB sampling.
N	The listed location area was revised to more clearly indicate the Parcel ID number (or other location indicator) that the well is in.
O	Well was sampled as part of the Phase B Area I investigation in June-July 2008.

Wells are organized by grid location as shown on Plate A - Starting point is on the northwestern-most grid in Area I (A-3) and ending with the southeastern-most grid covering Area I (O-4).																						
A-3	Parcel A	H-48	H-48B	TD = 41.1 ft	Qal *	6/18/2008	No		X	X	X	X	X	X	X	X		X		X	X	Serves as a stepout, generally upgradient for LOU 67 (Delbert Madsen Site), for general Site coverage and for BRC Parcel A.
A-5	Parcel A	PC-40	PC-40B	15 - 55	Qal	6/18/2008	Yes		X	X	X	X	X	X	X	X		X		X	X	Located to evaluate LOU 67; as general Site coverage; and to evaluate downgradient from Area I.
			PC-40BD	15 - 55 (dup)					X	X	X	X	X	X	X	X		X		X	X	This is a duplicate sample of PC-40B.
B-3	Parcel A	H-49A	H-49AB	TD = 49 ft	Qal *	6/24/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 67; as general Site coverage; and to evaluate downgradient from Area I.
D-3	Parcel A	MC-62	MC-62B	TD = 59 ft	Qal *	6/23/2008	No		X	X	X	X	X	X	X	X		X				Located for general Site coverage and to evaluate downgradient from Area I.
D-4	Parcel B	PC-72	PC-72B	15 -35	Qal	6/23/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as a lateral stepout for M-95 for general Site coverage; and to evaluate downgradient from Area I.
E-1	Parcel D	MC-45	MC-45B	TD = 35.33 ft	Qal *	6/25/2008	Yes		X	X	X	X	X	X	X	X		X		X	X	Located to evaluate potential offsite sources to the west; for general Site coverage downgradient from Area I.
E-3	Parcel A	MC-65	MC-65B	TD = 41.78 ft	Qal *	6/20/2008	No		X	X	X	X	X	X	X	X		X				Located for general Site coverage and to evaluate downgradient from Area I.
E-3	Parcel A	MC-66	MC-66B	TD = 47.52 ft	Qal *	6/20/2008	No		X	X	X	X	X	X	X	X		X				Located for general Site coverage and to evaluate downgradient from Area I.
E-5	Parcel B	M-44	M-44B	5 - 35	Qal/MCfg1	6/24/2008	No		X	X	X	X	X	X	X	X		X		X	X	Located to evaluate LOU 68 and as a lateral stepout for well M-95 and to evaluate BRC Parcels B and I.
E-6	Parcel I	M-94	M-94B	12 - 22	Qal	6/25/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 68; BRC Parcels B and I and the downgradient area of the Site.
E-6	Parcel I	M-95	M-95B	12 - 22	Qal	6/24/2008	Yes		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 68; BRC Parcel B; and the downgradient area of the Site.
			M-95B	12 - 22				X	X	X	X	X	X	X	X	X		X				This is a matrix spike / matrix spike duplicate sample. Fill one set of bottles for MS sample & second set of bottles for MSD sample. Label both sets of bottles as M-95B.
E-7	Parcel I	M-96	M-96B	10.5 - 20.5	Qal	7/9/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 68; BRC Parcel B; and the downgradient area of the Site.
F-2	Parcel D	MC-53	MC-53B	20 - 40	Qal *	6/25/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate potential offsite sources to the west; for general Site coverage downgradient from Area I.
F-4	Parcel B	PC-37	PC-37B	16.8 - 41.8	Qal	6/20/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as a downgradient stepout for LOU 68; to evaluate downgradient areas; and for general Site coverage.
G-1	Olin	MC-3	MC-3B	TD = 44.25 ft	Qal *		No		X	X	X	X	X	X	X	X		X				Located offsite to the west for general Site coverage; to evaluate potential offsite sources to the west; and to evaluate BRC Parcels C and E.
G-2	Parcel D	MC-94	MC-94B	TD = 40 ft	Qal *		No		X	X	X	X	X	X	X	X		X				Located to evaluate potential offsite sources to the west; for general Site coverage; and to evaluate downgradient from Area I.
G-2	Parcel E	MC-97	MC-97B	TD = 42 ft	Qal *	6/25/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate potential offsite sources to the west; for general Site coverage; and to evaluate downgradient from Area I.
G-3	Parcel D	MC-55	MC-55B	TD = 23 ft	Qal *		No		X	X	X	X	X	X	X	X		X				Located to evaluate potential offsite sources to the west; for general Site coverage downgradient from Area I.
H-2	Parcel C	H-28A	H-28AB	TD = 51 ft	MCfg1 *		No		X	X	X	X	X	X	X	X		X				Serves as a close stepout downgradient for LOU 1 and LOU 10; for general Site coverage; and to evaluate potential offsite sources to the west.
H-2	Parcel C	MC-32	MC-32B	TD = 34 ft	Qal *	6/25/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as a downgradient stepout for LOU 10; to evaluate potential offsite sources to the west; to provide general Site coverage; and to evaluate BRC Parcels C and E. This was a dry well - no water sample collected in Ju 2008.
H-2	I	M-6A	M-6AB	26.8 - 41.5	Qal/MCfg1	6/27/2008	No		X	X	X	X	X	X	X	X	X	X	X	X	X	Located as a downgradient stepout for LOU 1 and LOU 10; to evaluate possible offsite sources to the west; and for general Site coverage.
H-3	I	M-7B	M-7BB	25.5 - 50.5	Qal/MCfg1	6/26/2008	Yes		X	X	X	X	X	X	X	X	X	X	X	X	X	Located as a downgradient stepout for LOU 1and LOU 10; to evaluate possible offsite sources to the west; and for general Site coverage.
H-3	Parcel D	MC-59	MC-59B	TD = 32.58 ft	Qal *		No		X	X	X	X	X	X	X	X		X				Located to evaluate potential offsite sources to the west; for general Site coverage downgradient from Area I.
H-6	Parcel D	M-23	M-23B	9.4 - 37.4	Qal	6/25/2008	No		X	X	X	X	X	X	X	X		X		X	X	Located to serve as a upgradient stepout for LOU 68; as a downgradient stepout for LOU 1; to evaluate BRC Parcel C and D; and for general Site coverage.
			M-23BD	9.4 - 37.4 (dup)					X	X	X	X	X	X	X	X		X		X	X	This is a duplicate sample of M-23B.
H-8	Parcel J	M-48	M-48B	6.1 - 36.1	Qal/MCfg1	7/9/2008	Yes		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 69 and to evaluate BRC Parcels B and J.
I-4	I	M-98	M-98B	19 - 29	Qal		Yes		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 1 and for general Site coverage.
I-5	I	M-99	M-99B	16 - 31	Qal		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general Site coverage.
I-6	I	M-100	M-100B	19 - 29	Qal		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general Site coverage.
I-7	I	M-101	M-101B	17 - 27	Qal		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 1; as a downgradient stepout for LOUs 22, 23, and 32; as an upgradient stepout for LOU 69; and for general Site coverage.

K-3	I	MW-16	MW-16B	24.7 - 39.7	MCfg1	6/26/2008	No		X	X	X	X	X	X	X	X		X				New monitoring well to evaluate SRCs in upper Muddy Creek from offsite sources from west.
			MW-16B	24.7 - 39.7				X	X	X	X	X	X	X	X	X		X				This is a matrix spike / matrix spike duplicate sample. Fill one set of bottles for MS sample & second set of bottles for MSD sample. Label both sets of bottles as MW-16B.
K-5	I	M-69	M-69B	19.9 - 39.3	Qal/MCfg1	7/8/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 32 and to evaluate the western end of the Groundwater Barrier Wall.
K-5	I	M-79	M-79B	10.8 - 35.4	Qal/MCfg1	6/29/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 1; LOU 32 and the western end of the Groundwater Injection Trenches; and for general Site coverage.
K-6	I	M-83	M-83B	10.8-40.3	Qal/MCfg1		No		X	X	X	X	X	X	X	X		X		X	X	Located to evaluate LOU 32 and the Groundwater Injection Area; as an upgradient stepout for LOU 1, and LOUs 22 and 23; and for general Site coverage.
K-6	I	M-84	M-84B	11.8 - 34.1	Qal/MCfg1	6/29/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 32 and the Groundwater Injection Trench area; as an upgradient stepout for LOU 1 and LOUs 22 and 23; and for general Site coverage.
K-7	I	M-86	M-86B	11.3 -40.9	Qal/MCfg1		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 32 and the Groundwater Injection Trench area; as an upgradient stepout for LOU 1, LOUs 22 and 23; and for general Site coverage.
K-8	I	M-88	M-88B	7.3 - 36.8	Qal/MCfg1	6/25/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as an upgradient stepout for LOU 1; as a downgradient stepout for LOU 32; to evaluate possible offsite sources to the east; and for general Site coverage.
K-9	I	M-129	M-129B	20 - 40	MCfg1		No		X	X	X	X	X	X	X	X		X				Located to evaluate the eastern end of the barrier wall. Well was drilled and installed in March 2008.
K-9	TIMET	CLD1-R	CLD1-RB	25 -35	Qal/MCfg1	7/10/2008	No		X	X	X	X	X	X	X	X		X				Serves as a close stepout downgradient of LOU 5 (Beta Ditch) and general Site coverage. Located on Timet.
L-2	I	M-127	M-127B	35-50	MCfg1		No		X	X	X	X	X	X	X	X	X	X	X	X	X	New monitoring well located to evaluate LOU 2; to evaluate potential offsite sources to the west; and for general Site coverage. Well was drilled and installed in June 2008, but not yet sampled for Phase B.
L-3	I	M-126	M-126B	19.7 - 39.7	MCfg1	6/29/2008	No		X	X	X	X	X	X	X	X		X				New monitoring well located to serve as an up- to crossgradient stepout for LOU 2; to evaluate potential offsite sources from the west; and for general Site coverage.
			M-126BD	19.7-39.7 (dup)					X	X	X	X	X	X	X	X		X				This is a duplicate sample of M-126B.
L-4	I	M-14A	M-14AB	20 - 40	MCfg1	6/30/2008	No		X	X	X	X	X	X	X	X		X				Located as an upgradient stepout for LOUs 30, 56, and 58; as a downgradient well for LOU 39; and for general Site coverage.
L-4	I	M-57A	M-57AB	20 - 40	MCfg1	6/27/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as an upgradient stepout for LOU 32; to evaluate the west end of the Groundwater Barrier Wall; and for general Site coverage.
			M-57ABD	20 - 40 (dup)					X	X	X	X	X	X	X	X		X				This is a duplicate sample of M-57AB.
L-5	I	I-B	I-BB	17.8 - 42.5	Qal/MCfg1	7/8/2008	No		X	X	X	X	X	X	X	X		X				Located as a downgradient stepout for LOU 56 and LOU 58; as an upgradient stepout for LOU 57, and for general Site coverage.
L-6	I	M-55	M-55B	14.6 - 44.6	Qal/MCfg1	7/1/2008	Yes		X	X	X	X	X	X	X	X		X				Located just upgradient of the groundwater barrier wall; to evaluate LOU 32; to serve as a downgradient stepout for LOUs 19, 31, and 55 and for general Site coverage.
L-6	I	M-65	M-65B	14.4 - 39	Qal/MCfg1	7/2/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as an upgradient stepout for LOU 32; as a downgradient stepout for LOU 57; and for general Site coverage.
			M-65BD	14.4 - 39 (dup)					X	X	X	X	X	X	X	X		X				This is a duplicate sample of M-65B.
L-6	I	M-78	M-78B	21.5 - 41.5	Qal/MCfg1		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 32; as a downgradient stepout for LOU 55; and for general Site coverage.
L-8	I	M-61	M-61B	9.3 - 38.8	Qal/MCfg1	6/26/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 32 and the eastern end of the Groundwater Barrier Wall.
L-8	I	M-67	M-67B	7.8 - 37.8	Qal/MCfg1	6/27/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as an upgradient stepout for LOU 32 and for general Site coverage.
			M-67BD	7.8 - 37.8 (dup)					X	X	X	X	X	X	X	X		X				This is a duplicate of M-67B.
			M-67B	7.8 - 37.8				X	X	X	X	X	X	X	X	X		X				This is a matrix spike / matrix spike duplicate sample. Fill one set of bottles for MS sample & second set of bottles for MSD sample. Label both sets of bottles as M-67B.
L-8	I	M-68	M-68B	11.2 - 39.8	Qal/MCfg1	6/27/2008	No		X	X	X	X	X	X	X	X		X				Located to serve as a downgradient stepout for LOU 5 and 20; as an upgradient stepout for LOU 32; as an evaluation of the east end of the Groundwater Barrier Wall; and for general Site coverage.
L-9	TIMET	CLD2-R	CLD2-RB	20 - 40.27	Qal	7/10/2008	No		X	X	X	X	X	X	X	X		X				Serves as a close stepout downgradient of LOU 5; and a further downgradient stepout for LOU 20 (Pond C-1 and Associated Piping), and for general Site coverage. Located on Timet.
L-9	I	M-130	M-130B	20 - 40	MCfg1		No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 5 and the eastern end of the barrier wall. Well was installed in March 2008 but not yet sampled for Phase B.
L-10	TIMET	CLD3-R	CLD3-RB	nr	MCfg1*	7/10/2008	No		X	X	X	X	X	X	X	X		X				Located to evaluate LOU 67; as general Site coverage; and to evaluate downgradient from Area I. Located on Timet.

Table 3 (Field Version)
Groundwater Sampling and Analysis Plan for Area I
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

									Laboratory :	CAS Kelso, WA		Columbia Analytical Services Rochester, NY							GEL Charleston, SC	CAS Houston, TX	STL Denver, CO	Alpha Analytical Sparks, NV	
Grid Location	Location Area	Monitoring Well No.	Sample ID No.[A]	Screen Interval (ft bgs)	Soil Type Expected Across Screen Interval[1,B]	Date Sampled (for Phase B)	Well Sampled for Phase A? (y/n)	Matrix Spike/MS Duplicate	Perchlorate (EPA 314.0)	Metals[2.]	VOCs[3.] (EPA 8260)	Hex Cr[4.] (EPA 7199)	Wet Chemistry[5.]	Total Cyanide[J.] (EPA 9012A)	OCPs[6.] (EPA 8081A)	SVOCs[7.] (EPA 8270C)	PCBs[8, E] (EPA 8082)	Radionuclides[9.]	PCBs[8, E] (EPA 1668A)	OPPs[10, F] (8141A)	Organic Acids[F]	Location Description and Rationale for Investigation
Wells are organized by grid location as shown on Plate A - Starting point is on the northwestern-most grid in Area I (A-3) and ending with the southeastern-most grid covering Area I (O-4).																						
M-1	Olin	H-38	H-38B	25 - 50	Qal*		No		X	X	X	X	X	X	X	X		X				To evaluate possible offsite sources from the west, as an upgradient stepout to LOU 5 (Beta Ditch) and for general Site coverage. Depth of screen will be confirmed in the field.
M-2	I	TR-4	TR-4B	124.5 - 144.5	MCfg1	7/9/2008	No		X	X	X	X	X	X	X	X	X	X	X	X	X	Located to serve as a downgradient stepout for LOU 5; to evaluate possible offsite sources to the west (particularly for VOCs); and for general Site coverage.
M-3	I	M-125	M-125B	35-50	MCfg1		No		X	X	X	X	X	X	X	X	X	X	X	X	X	New monitoring well located to serve as a downgradient stepout for LOUs 5 and 54; to evaluate potential offsite sources from the west; and for general Site coverage. Well was installed in June 2008 but not yet sampled for Phase B.
			M-125B	35-50				X	X	X	X	X	X	X	X	X	X	X	X	X	X	This is a matrix spike / matrix spike duplicate sample. Fill one set of bottles for MS sample & second set of bottles for MSD sample. Label both sets of bottles as M-125B.
M-8	I	M-39	M-39B	24.9 - 39.9	Qal/MCfg1	7/8/2008	Yes		X	X	X	X	X	X	X	X		X		X	X	Located to serve as a downgradient stepout for LOUs 5, 18, 20, and 21; and for general Site coverage.
N-4	I	M-142	M-142B	30-45	MCfg1		No		X	X	X	X	X	X	X	X		X		X	X	New monitoring well constructed in borehole for SA87 to evaluate LOU 39 (Satellite Accumulation Point, AP Maintenance Shop). Well was installed in June 2008 but not yet sampled for Phase B.
O-2	I	M-123	M-123B	34-51	MCfg1	7/11/2008	No		X	X	X	X	X	X	X	X	X	X	X	X	X	New monitoring well located to evaluate LOU 35; as an upgradient stepout for LOUs 38 and 54; to evaluate potential offsite sources to the west; and for general Site coverage. PCB analysis for groundwater requested by NDEP at this location. Well was installed in June 2008 but not yet sampled for Phase B.
			M-123BD	34-51 (dup)					X	X	X	X	X	X	X	X	X	X	X	X	X	This is a duplicate sample of M-123B.
O-4	I	M-124	M-124B	34-49	MCfg1	7/11/2008	No		X	X	X	X	X	X	X	X		X				New monitoring well located to evaluate LOU 64; serve as a downgradient stepout for LOU 63; as an upgradient stepout for LOU 39; and for general Site coverage. Well was installed in June 2008 but not yet sampled for Phase B
O-4	I	M-128	M-128B	40-55	MCfg1		No		X	X	X	X	X	X	X	X		X				New monitoring well to serve as a downgradient stepout for LOUs 35 and 64; as an upgradient stepout for LOUs 39-52, and 57; and for general Site coverage. Well was installed in June 2008 but not yet sampled for Phase B.

Number of Wells: 64

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007). ENSR is in the process of obtaining screen interval information from BMI.
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, Zinc
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene).
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters is shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).
7.	SVOCs = Semi volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides
TBD	To Be Determined when well is constructed.
nr	Not recorded in Tronox database (screen intervals to be acquired from BMI).
Qal	Quaternary Alluvium.
6/25/2008	Yellow indicates sample was collected on the date shown.
MS/MSD	Matrix Spike sample and Matrix Spike Duplicate sample (fill 2nd set of bottles for MS sample and 3rd set of bottles for MSD sample).
MCfg1	Muddy Creek Formation - first fine-grained facies.

Area II

Notes:

n/a	Not applicable - boring is not associated with a specific LOU but is located to evaluate soil for general area-wide coverage.
X	Sample will be collected and analyzed.
	No sample collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO	Total petroleum hydrocarbons - Diesel-Range Organics and Oil-Range Organics (ORO).
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00±0.05), and 2) with extraction method #3 (reagent water); per NDEP.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thalium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997). A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
11.	Organophosphorous Pesticides were added to SAP by NDEP (July 21, 2008).
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
13.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

Rational Code:

R	Brown-shading indicates items that have been removed from Table 2 in the june 2008 Area II Work Plan originally reviewed by NDEP.
X	Green-shading indicates items that have been added or changed from Table 2 in the june 2008 Area II Work Plan originally reviewed by NDEP.
A	The soil sample was removed from the sampling plan because the 2008 groundwater data indicates that the water table is likely at or above this depth.
B	Tronox has chosen to increase the interval between sample depths as discussed with NDEP (October 1, 2008). Soil samples will be collected at the following depths: 0 to 2-inches (asbestos only), 0.5-ft, 10-ft (or 1-ft below the pipeline invert as appropriate), and the capillary fringe (2-ft above the water table). Additional samples will be collected if the vertical distance between samples exceeds 20-ft (sample depth will be rounded-off to the closest 5-ft interval). Unless otherwise indicated, soil samples will not be collected at 20, 30 or 40-ft.

Table 2
Soil Sampling and Analytical Plan for Area II
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

Laboratory K. :					CAS - Kelso		CAS - Rochester								CAS - Houston		GEL - Charleston, SC	STL-Denver	Alpha Analytical Sparks, NV	EMSL Westmont, NJ	Rationale for Revision	Location Description and Characterized Area Rationale (NDEP may not agree with upgradient and downgradient descriptions)
Grid Location	LOU Number	Boring No.	Sample ID Number	Sample Depths [1.] (ft. bgs)	Perchlorate (EPA 314.0)	Metals [2.] (EPA 6020)	Hex Cr [3.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH-GRO (EPA 8015B)	VOCs [4.] (EPA 8260B)	Wet Chemistry Analytes [5.]	Total Cyanide [L.] (EPA 9012A)	OCPs [6.] (8081A)	SVOCs [7.] (EPA 8270C)	PCBs [8.] (EPA 8082)	PCBs [8.] (EPA 1668A)	Dioxins/ Furans [9.]	Radio-nuclides [10.]	OPPs [11.]	Organic Acids [12.]	Asbestos [13.] EPA/540/R-97/028		
Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area II (M-2) and ending with the southeastern most grid in Area II (S-7).																						
E	OCP analysis was removed because OCPs were not created, stored, conveyed, or disposed at this location.																					
F	PCB analyses (both Aroclor and congener PCBs) were requested by NDEP (July 21, 2008) at this location, but Tronox proposes not to analyze soil for PCBs (both 8082 and 1668A) for the following reasons: 1) Creation of congener PCBs require high operating temperatures (400 to 700 degrees Celsius) whereas Tronox production processes (historic and current) operate at ambient temperatures, and 2) Aroclor PCBs are typically associated with electrical transformer spills and transformers were not associated with this area.																					
G	New boring added by NDEP (July 21, 2008).																					
H	Platinum analysis was added to this sample by NDEP (July 21, 2008)																					
J	Soil sample will be collected at this depth because the depth is one-foot below pipeline invert.																					
K	Laboratory information was added to Table 2 to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.																					
L	Cyanide analysis was added to this borning by the NDEP (July 21, 2008)																					
N	Boring was removed from the table because it is not located in Area II.																					
P	Aroclor and congener PCBs were added per NDEP (July 21, 2008).																					
Q	Analysis selected for this additional boring are consistent with the LOU packet for the represented LOU(s)																					
S	Soil boring was extended to groundwater, per NDEP (July 21, 2008).																					
U	NDEP requested (July 21, 2008) that 1,4-dioxane be added. 1,4-Dioxane is a standard analyte in the SVOC analysis.																					
V	SVOC analysis was added to this boring by NDEP (July 21, 2008).																					
W	TPH-DRO/ORO (and/or TPH-GRO) was added to this boring by NDEP (July 21, 2008).																					
Z	OPPs and OAs were added to this boring by Tronox for general coverage and to evaluate the potential transport of these constituents by wind and groundwater.																					
bb	OPPs and OAs for this boring were requested by NDEP (July 21, 2008); however, Tronox proposes not to sample this boring because it is located in an area considered not to have been potentially impacted by migration of off-site sources to the west.

	86	= Number of Borings																							

Notes:

n/a	Not applicable - boring is not associated with a specific LOU but is located to evaluate soil for general area-wide coverage.
X	Sample will be collected and analyzed.
	No sample collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO	Total petroleum hydrocarbons - Diesel-Range Organics and Oil-Range Organics (ORO).
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00±0.05), and 2) with extraction method #3 (reagent water); per NDEP.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thalium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997). A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
11.	Organophosphorous Pesticides were added to SAP by NDEP (July 21, 2008).
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
13.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007). Tronox is in the process of obtaining information from BMI.
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, Zinc
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene).
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).
7.	SVOCs = Semi volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides
IIIN/E/W/S	Well located outside (north, east, west, or south) of Area II.
TBD	To Be Determined when well is constructed.
(a)	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
TD	Total Depth of the well determined by Site-wide routine groundwater monitoring.
nr	Not recorded in Tronox database (screen intervals to be acquired from BMI where possible or determined by downhole camera).
Qal	Quaternary Alluvium.
MCfg1	Muddy Creek Formation - first fine-grained facies
MCcg1	Muddy Creek Formation - first coarse-grained facies
X	Green-shading indicates items that have been added or changed from Table 3 in the June 2008 Area II Work Plan originally reviewed by NDEP.
R	Brown-shading indicates items that have been removed from Table 3 in the June 2008 Area II Work Plan originally reviewed by NDEP.
A	Sample ID was added to convey sample ID nomenclature to field sampling team ("B" suffix denotes sample is associated with Phase B sampling event).
B	OPPs and Organic Acids were added per NDEP (July 21, 2008).
C	Asterisks were removed from April 2008 submission
D	Well was removed from Table 3 because this well is not located in Area II.
E	Laboratory information was added to Table 3 to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.
F	Total Cyanide was added per NDEP (July 21, 2008)
G	Expected soil types across expected screen interval based on nearby wells
H	Hyphen inserted to correct typographical error

Notes:

X	Green-shading indicates new addition to this table.
R	Brown-shading indicates item will be removed from this table.
X	Sample will be collected and analyzed.
	No sample will be collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-D/O	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5±0.05), and 2) with extraction method #3 (reagent water); per NDEP, May 6, 2008.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 ft below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and in some cases 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997). A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDE
11.	Organophosphorous Pesticides were added to the SAP by NDEP (July 21, 2008). Tronox proposes to sample at 0.5 ft bgs, capillary fringe, and in some cases at the mid-point depth.
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.

Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

				Laboratory [K.] :	Columbia Analytical Services Kelso, WA		Columbia Analytical Services - Rochester, NY									Columbia Analytical Services - Houston, TX		GEL - Charleston, SC	STL Denver, CO	Alpha Analytical Sparks, NV	EMSL Westmont, NJ		
Grid Location	LOU Number	Boring No.	Sample ID Number	Sample Depths[1.] (ft, bgs)	Perchlorate (EPA 314.0)	Metals[2.] (EPA 6020)	Hex Cr[3.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH-GRO (EPA 8015B)	VOCs [4.] (EPA 8260B)	Wet Chemistry Analytes [5.]	Total Cyanide (EPA 9012A)	OCPs [6.] (8081A)	SVOCs [7.] (EPA 8270C)	PCBs[8.] (EPA 8082)	PCBs[8.] (EPA 1668A)	Dioxins/ Furans [9.]	Radio-nuclides[10.]	OPPs[11.] (EPA 8141)	Organic Acids[12.]	Asbestos [13.] EPA/540/R-97/028	Rationale For Revision	Location Description and Rationale for Investigation (NDEP may not agree with upgradient and downgradient descriptions)
Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area 3 (N-7) and ending with the southeastern most grid in Area 3 (S-8).																							

13. Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14. Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

Rationale Codes

A The soil sample was removed from the sampling plan because the 2008 groundwater data indicates that the water table is likely above this depth.
B Tronox has chosen to increase the interval between sample depths as discussed with NDEP (October 1, 2008). Soil samples will be collected at the following depths: 0 to 2-inches (asbestos only), 0.5-ft (or at Mn tailings/soil interface, as appropriate), 10-ft (or 10-ft beneath Mn tailings/soil interface or 1-ft below a pipeline invert, as appropriate), and the capillary fringe (2-ft above the water table). Additional samples will be collected if the vertical distance between samples exceeds 20 ft. (depth rounded off to the closest 5-ft interval). Unless otherwise indicated, soil samples will not be collected at depths of 20, 30, or 40-ft.
C Platinum was added per NDEP (July 21, 2008)
E Soil sample will be collected at this depth because the depth is one-foot below pipeline invert.
F Aroclor and congener PCBs were added per NDEP (July 21, 2008).
G Where indicated, judgmental OCP samples were removed from the sampling plan because OCPs were not created, stored, conveyed, or potentially disposed at this location. All random grid samples are analyzed for OCPs.
H Tronox is not requesting closure for these LOUs at this time because they are still active; therefore, Judgmental borings were removed from the Phase B sampling plans. Sampling is postponed until production operations permanently cease (per discussions with NDEP, October 1, 2008).
I Sample depth was added so that the capillary fringe sample will be collected 2 feet above the water table.
K Laboratory information was added to Table 2 to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.
L SVOC analysis was added to this boring per NDEP (July 21, 2008).
M Aroclor PCB analysis (EPA 8082) was added to this boring per NDEP (July 21, 2008).
N New boring added per NDEP (July 21, 2008)
O TPH-DRO/ORO was added per NDEP (July 21, 2008).
Sample depth dependent upon depth of the Mn tailings/soil interface. Final depth will be determined in the field
Q SA141 was moved to grid O-7 from O-8 per NDEP (July 21, 2008).
Sample depth should be 10-ft deeper than the Mn tailings/soil interface sample or 1-ft below a pipeline invert. Final depth will be determined in the fields
W Wipe sample of concrete surface for Aroclor and congener PCBs was added to sampling plan per NDEP (July 21, 2008).
Y Asbestos sample removed because it is not feasible to collect a sample from the Mn tailings pile or the Mn tailings/soil interface.
Z OPPs and organic Acids were added per NDEP (July 21, 2008). Note that sample is proposed at 14 foot depth to evaluate pipeline invert..

O-7	RSAO7	RSAO7-0.0B	0.0																						Boring located to evaluate potential impacts to soil underlying LOU 24 (Mn Tailings Pile Area) and LOU 46
O-7		RSAO7-15B#	15 #				X	X	X	X		X	X		X	X			X	X					(Former Old Main Cooling Tower and Recirculation Lines). Located in low spot of LOU 24 and down hill
O-7		RSAO7-25B##	25 ##				X	X	X	X		X	X		Hold	X				X					topographically of LOU 46.
O-7		RSAO7-35B#	35 #				X	X	X	X		X	X		Hold	X				X					Soil samples will be collected below Mn-tailings/soil interface; interface at approx. 15 ft bgs.
O-7		RSAO7-47B	47				X	X	X	X		X	X		X	X				X					GW anticipated at ~ 49 feet bgs.
O-7	SA178	SA178-0.0B	0.0																				X		Boring located to evaluate LOU 20 (Pond C-1 Associated Piping Associated Piping), LOU 22 (WC-West
O-7		SA178-0.5B	0.5				X	X	X	X		X	X	X		X			X	X					Associated Piping), LOU 23 (WC-East Associated Piping), LOU 34W (Historic Mn Tailings Pile Area, West),
O-7		SA178-10B	10				X	X	X	X		X	X	X		X				X					and LOU 60 (Acid Drain system). Located within this cluster of LOUs at a likely high release potential location
O-7		SA178-17B	17				X	X	X	X		X	X	X		X				X					for all five LOUs (low point, edge of road).
O-7		SA178-25B	25				X	X	X	X		X	X	X		X				X					LOU 60 pipeline invert located approximately 16 ft bgs.
O-7		SA178-43B	43				X	X	X	X		X	X	X		X				X					GW anticipated at ~45 feet bgs.
O-7	SA52	SA52-0.0B	0.0																						Boring located to evaluate soil underlying LOU 24 (Mn Tailings Pile Area) and LOU 46 (Former Old Main
O-7		SA52-19B#	19 #				X	X	X				X						X	X					Cooling Tower and Recirculation Lines). Located within the footprint of both LOUs at a topographically low
O-7		SA52-19B#	19 #		X		X	X	X				X	X	X		X			X				X	area for worst case coverage.
O-7		SA52-33B#	33 #				X	X	X				X	X						X					Soil samples will be collected below Mn-tailings/soil interface; interface at approx. 19 to 25 feet bgs.
O-7		SA52-33B#	33 #		X		X	X	X				X	X	X		X			X				X	LOU 60 pipeline invert located approximately 13 feet below Mn tailings/soil interface (32 to 38 bgs).
O-7		SA52-43B	43				X	X	X				X	X						X					GW anticipated at ~45 feet bgs.
O-7	SA149	SA149-0.0B	0.0																						Boring located to evaluate soil underlying LOU 24 (Mn Tailings Pile Area) and LOU 46 (Former Old Main Cooling
O-7		SA149-17B#	17 #				X	X	X				X						X	X					Tower and Recirculation Lines). Located within LOU 24 and just upgradient of LOU 46 to provide area coverage
O-7		SA149-27B#	27 ##				X	X	X				X							X					of both LOUs.
O-7		SA149-45B	45				X	X	X				X							X					Soil samples will be collected below Mn-tailings/soil interface; interface at approx. 16 feet bgs.
O-7		SA149-45BD	45 (dup)				X	X	X				X							X					GW anticipated at ~47 feet bgs.
O-7	SA137	SA137-0.0B	0.0																				X		Boring located to evaluate LOU 24 (Mn Tailings Pile Area) historical surface drainage path and LOU 60 (Acid
O-7		SA137-0.5B	0.5				X	X	X	X		X	X	X		X			X	X					Drain System) conveyance route. Boring to be drilled on soil in surface drainage swale near toe of Mn tailings
O-7		SA137-15B	15				X	X	X	X		X	X	X		X				X					pile (not on top of tailings pile). LOU 60 pipeline invert occurs approximately 14 feet bgs.
O-7		SA137-31B	31				X	X	X	X		X	X	X		X				X					GW anticipated at ~33 feet bgs.
O-7	SA141	SA141-0.0B	0.0																						Boring located to evaluate potential impacts to underlying soil from LOU 24 (Mn Tailings Pile Area), LOU 46
O-7		SA141-13B#	13 #				X	X	X	X						X			X	X					Cooling Tower and Recirculation Lines), and LOU 60 (Acid Drain System).
O-7		SA141-13BD#	13 (dup)#				X	X	X	X						X			X	X					Former Old Main Cooling Tower soil samples will be collected below Mn-tailings/soil interface; interface at
O-7		SA141-23B##	23 ##				X	X	X	X						X				X					approx 18 ft bgs. LOU 60 pipeline invert occurs at 13 feet below Mn tailings/soil interface (`31 feet bgs).
O-7		SA141-30B	30				X	X	X	X						X				X					The soil sample for the pipeline invert will determined in the field based on the depth to the Mn tailings/soil
																									interface. Groundwater anticipated at ~32 ft bgs.
																									*The anticipated groundwater level is at the same depth that the pipeline invert is anticipated to be located.
O-8	RSAO8	RSAO8-0.0B	0.0																						Boring located to evaluate for potential impacts to soil underlying LOU 24 (Manganese Tailings Pile Area) and
O-8		RSAO8-15B#	15 #				X	X	X	X					X				X	X					LOU 46 (Former Old Main Cooling Tower and Recirculation Lines). Located within LOU 24 and just upgradient of
O-8		RSAO8-25B##	25 ##				X	X	X	X					Hold					X					area coverage LOU 46 to provide of both LOUs.
O-8		RSAO8-43B	43				X	X	X	X					X					X					Soil samples will be collected below Mn-tailings/soil interface at approx 15 ft bgs. GW anticipated at ~45 feet bgs.
																									Borehole for RSAO8 will be converted to well M-148.
O-8	SA108	SA108-0.0B	0.0																				X		Boring located to evaluate soil underlying LOU 24 (Mn Tailings Pile Area) and LOU 46 (Former Old Main Cooling
O-8		SA108-20B#	20 #				X	X	X				X						X	X					Tower and Recirculation Lines). Located within the footprint of both LOUs at a slight low spot to provide
O-8		SA108-20B#	20 #	X			X	X	X				X	X					X	X					reasonable coverage of both.
O-8		SA108-30B##	30 ##				X	X	X				X	X						X					Soil samples will be collected below Mn-tailings/soil interface; interface at approx 20 to 29 feet bgs.
O-8		SA108-48B	48				X	X	X				X	X						X					GW anticipated at ~50 feet bgs.
O-8	SA142	SA142-0.0B	0.0																						Boring located to evaluate potential impacts to underlying soil from LOU 24 (Mn Tailings Pile Area), LOU 46
O-8		SA142-20B	20				X	X	X	X			X	X	X				X	X					(Former Old Main Cooling Tower and Recirculation Lines), and LOU 60 (Acid Drain System).
O-8		SA142-20BD	20 (dup)				X	X	X	X			X	X	X				X	X					Soil samples will be collected below Mn-tailings/soil interface; interface at approx 20 to 30 ft bgs.
O-8		SA142-34B	34				X	X	X	X			X	X	X					X					Lou 60 pipeline invert occurs at approximately 13 feet below Mn tailings/soil interface (33-43 bgs).
O-8		SA142-51B	51				X	X	X	X			X	X	X					X					Groundwater anticipated at ~53 ft bgs.

Notes:

X	Sample will be collected and analyzed.
	No sample will be collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-D/O	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00 ± 0.05), and 2) with extraction method #3 (reagent water); per NDEP, May 6, 2008.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 ft below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and in some cases 1668A. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997). A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
11.	Organophosphorous Pesticides were added to the SAP by NDEP (July 21, 2008). Tronox proposes to sample at 0.5 ft bgs, capillary fringe, and in some cases at the mid-point depth.
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
13.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).
#	Sample depth dependent upon depth of the Mn tailings/soil interface. Final depth will be determined in the field
##	Sample depth should be 10-ft deeper than the Mn tailings/soil interface sample or 1-ft below a pipeline invert. Final depth will be determined in the fields

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007). ENSR is in the process of obtaining information from BMI.
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, and Zinc.
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene).
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).
7.	SVOCs = Semi-volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides

Table 3
Groundwater Sampling and Analysis Plan - Area III
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

						Laboratory [E.] :	CAS - Kelso, WA		CAS - Rochester, NY						GEL -Charleston, SC	STL - Denver	Alpha Analytical Sparks, NV	Rationale for Revision	Location Description and Rationale for Investigation
Grid Location	Location Area	Monitoring Well No.	Sample ID No.[A]	Screen Interval (ft bgs)	Soil Type Expected Across Screen Interval[1.]	Well Sampled for Phase A? (y/n)	Perchlorate (EPA 314.0)	Metals[2.]	VOCs[3.] (EPA 8260)	Hex Cr[4.] (EPA 7199)	Wet Chemistry[5.]	Total Cyanide [F.] (EPA 9012A)	OCPs[6.] (EPA 8081A)	SVOCs[7.] (EPA 8270C)	Radionuclides [9.]	OPPs[10.B] (8141A)	Organic Acids [C]		
Wells are organized by grid location as shown on Plate A - Starting point is on the northwestern-most grid in Area III (N-7) and ending with the southeastern-most grid covering Area III (Q-9).																			

IIIN/E/W/S	Well located outside (north, east, west, or south) of Area III.
TBD	To be determined when well is constructed.
(a)	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
TD	Total Depth of the well determined by Site wide routine groundwater monitoring.
nr	Not recorded in the Tronox Database (June 2008) - information will be acquired from BMI or determined by downhole camera.
Qal	Quaternary Alluvium.
MCfg1	Muddy Creek Formation - first fine-grained facies.
MCcg1	Muddy Creek Formation - first coarse-grained facies.
X	Green-shading indicates items that have been added or changed from Table 3 in the June 2008 Area III Work Plan originally reviewed by NDEP.
R	Brown-shading indicates items that have been removed from Table 3 in the June 2008 Area III Work Plan originally reviewed by NDEP.
A	Sample ID was added to convey sample ID nomenclature to field sampling team.
B	OPPs were added per NDEP (July 21, 2008).
C	Organic Acids were added per NDEP (July 21, 2008).
D	Well was removed from Table 3 because this well is not located in Area III.
E	Laboratory information was added to Table 3 to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.
F	Total cyanide column was added per NDEP (July 21, 2008).

R-8	III	M-29	M-29B	22-42	MCfg1	no			X	X	X	X	X	X	X	X	X			Located to evaluate groundwater conditions beneath the Unit 6 building for LOUs 44 and 37.

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007). ENSR is in the process of obtaining information from BMI.
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, and Zinc.
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene).
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene)
7.	SVOCs = Semi-volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides
IIIN/E/W/S	Well located outside (north, east, west, or south) of Area III.
TBD	To be determined when well is constructed.
TD	Total Depth of the well determined by Site wide routine groundwater monitoring.
nr	Not recorded in the Tronox Database (June 2008) - information will be acquired from BMI or determined by downhole camera.
Qal	Quaternary Alluvium.
MCfg1	Muddy Creek Formation - first fine-grained facies.
MCcg1	Muddy Creek Formation - first coarse-grained facies

Area IV

Notes:

X	Sample will be collected and analyzed.
	No sample will be collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO/ORO	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00± 0.05), and 2) with extraction method #3 (reagent water); per NDEP, May 6, 2008.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thalium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3, HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and/or 1668A as indicated in table. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997)A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
11.	Organophosphorous Pesticides were added to SAP by NDEP (July 21, 2008).
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
13.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

Rationale Codes

A	The soil sample was removed from the sampling plan because the 2008 groundwater data indicates that the water table is likely above this depth.
B	Tronox has chosen to increase the interval between sample depths as discussed with NDEP (October 1, 2008). Soil samples will be collected at the following depths: 0 to 2-inches (asbestos only), 0.5-ft, 10-ft (or 1-ft below the pipeline invert as appropriate), and the capillary fringe (2-ft above the water table). Mid-depth samples will be collected between the 10-ft and capillary fringe samples to make the vertical distance between samples no greater than 20 ft (sample depth rounded off to Unless otherwise indicated, soil samples will not be collected at depths 20 and 30-ft. Note that additional samples will be collected to keep vertical distances between samples to 20-ft or less.
E	Soil sample will be collected at this depth because the depth is one-foot below a pipeline invert.
F	Aroclor and congener PCBs were added per NDEP (July 21, 2008).
G	Where indicated, OCPs were removed from the sampling plan because OCPs were not created, stored, conveyed, or potentially disposed at this location.
K	SVOC analysis was added to this boring per NDEP (July 21, 2008).
L	Aroclor PCB analysis (EPA 8082) was added to this boring per NDEP (July 21, 2008).
N	TPH-DRO/ORO was added per NDEP (July 21, 2008).
Q	Sample depth was revised so that the capillary fringe sample will be collected 2 feet above the water table.
R	Radionuclides added where they were left off boring SA-115 per NDEP comment June 18, 2008
S	Organophosphorous Pesticides and Organic Acids were added to SAP by NDEP (July 21, 2008 and subsequent teleconferences)..
X	Green-shading indicates new addition to this table.
R	Brown-shading indicates item will be removed from this table.

Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area IV (P-4) and ending with the southeastern most grid in Area IV (U-7).																									
R-4		SA111-39B	39			X	X	X	X		X	X	X		X				X						
R-4	SA190	SA190-0.0B	0.0																			X			Boring located to evaluate LOU 25 (Process Hardware Storage Area) and for Unit 1 area-coverage. Located as a general
R-4		SA190-0.5B	0.5			X	X	X	X		X	X	X		X			X	X						stepout for LOU 25 and for general coverage of Unit 1.
R-4		SA190-10B	10			X	X	X	X		X	X	X		X				X						GW anticipated at ~40 feet bgs.
R-4		SA190-25B	25			X	X	X	X		X	X	X		X				X						
R-4		SA190-38B	38			X	X	X	X		X	X	X		X				X						
R-4		SA190-38B	38	X		X	X	X	X		X	X	X		X				X						
R-4	SA191	SA191-0.0B	0.0																			X			Boring located to evaluate Unit 2 for area coverage.
R-4		SA191-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X						GW anticipated at ~42 feet bgs.
R-4		SA191-10B	10			X	X	X	X		X	X	X	X	X				X						
R-4		SA191-25B	25			X	X	X	X		X	X	X	Hold	X				X						
R-4		SA191-40B	40			X	X	X	X		X	X	X	X	X				X						
R-4		SA191-40BD	40 (dup)			X	X	X	X		X	X	X	X	X				X						
R-5	RSAR5	RSAR5-0.0B	0.0																			X			Boring located to evaluate LOU 4 (Former Hardesty Chemical Company Site), LOU 59 (Storm Sewer System), and LOU 60
R-5		RSAR5-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X						(Acid Drain System) and for Unit 3 area-wide coverage. Random boring as a step out for LOU 4. Boring adjacent to LOU
R-5		RSAR5-10B	10			X	X	X	X		X	X	X	Hold	X				X						59 and LOU 60 to evaluate potential piping releases, and for general coverage of Unit 3.
R-5		RSAR5-25B	25			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~42 feet bgs.
R-5		RSAR5-40B	40			X	X	X	X		X	X	X	X	X				X						
R-5		RSAR5-40B	40	X		X	X	X	X		X	X	X	X	X				X						
R-5	SA135	SA135-0.0B	0.0																			X			Boring located within LOU 42 (former location of salt conveyor) to evaluate worst-case scenario release location
R-5		SA135-0.5B	0.5			X	X	X	X		X	X	X		X			X	X						(conveyor and inlet hopper). Boring to be converted to Well M-144.
R-5		SA135-10B	10			X	X	X	X		X	X	X		X				X						GW anticipated at ~39 feet bgs.
R-5		SA135-10BD	10 (dup)			X	X	X	X		X	X	X		X				X						
R-5		SA135-25B	25			X	X	X	X		X	X	X		X				X						
R-5		SA135-37B	37			X	X	X	X		X	X	X		X				X						
S-3	RSAS3	RSAS3-0.0B	0.0																			X			Boring located approximately 200 feet south of Unit 1 for area-wide coverage and not associated with any specific LOU.
S-3		RSAS3-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X	X	X				PCBs and TPH-DRO/ORO added to SAP to evaluate for potential impacts from Western Area Power Administration
S-3		RSAS3-0.5BD	0.5 (dup)			X	X	X	X		X	X	X	X	X	X		X	X	X	X				(WAPA) site per NDEP.
S-3		RSAS3-10B	10			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~46 feet bgs.
S-3		RSAS3-25B	25			X	X	X	X		X	X	X	Hold	X				X						
S-3		RSAS3-44B	44			X	X	X	X		X	X	X	X	X	X			X	X	X				
S-4	RSAS4	RSAS4-0.0B	0.0																			X			Boring located to evaluate LOU 59 (Storm Sewer System) 350 feet south of Unit 2 for area-wide coverage. Random
S-4		RSAS4-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X	X	X				boring adjacent to LOU 59 piping to evaluate potential piping releases, adjacent to SG46 for VOC comparison purpose
S-4		RSAS4-10B	10			X	X	X	X		X	X	X	Hold	X	X			X						and for area-wide coverage. PCBs and TPH-DRO/ORO added to SAP to evaluate for potential impacts from WAPA
S-4		RSAS4-30B	30			X	X	X	X		X	X	X	Hold	X				X						site per NDEP. GW anticipated at ~47 feet bgs.
S-4		RSAS4-45B	45			X	X	X	X		X	X	X	Hold	X	X			X						
S-4		RSAS4-45BD	45 (dup)			X	X	X	X		X	X	X	X	X	X			X						
S-5	RSAS5	RSAS5-0.0B	0.0																			X			Boring located 150 feet south of Unit 3 for area-wide coverage and north (downgradient) of WAPA Site and not
S-5		RSAS5-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X						associated with a specific LOU. Adjacent to SG65 for VOC comparison purposes. PCBs and TPH-DRO/ORO added to
S-5		RSAS5-10B	10			X	X	X	X		X	X	X	Hold	X				X						SAP to evaluate for potential impacts from WAPA site per NDEP.
S-5		RSAS5-25B	25			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~38 feet bgs.
S-5		RSAS5-36B	36			X	X	X	X		X	X	X	X	X	X			X						
S-5		RSAS5-36BD	36 (dup)			X	X	X	X		X	X	X	X	X	X			X						
S-6	RSAS6	RSAS6-0.0B	0.0																			X			Boring located 100 feet south-southeast of Tronox Administration Building for area-wide coverage and not associated
S-6		RSAS6-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X						with a specific LOU. PCBs and TPH-DRO/ORO added to SAP to evaluate for potential impacts from WAPA site per
S-6		RSAS6-10B	10			X	X	X	X		X	X	X	Hold	X				X						NDEP.
S-6		RSAS6-25B	25			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~41 feet bgs.
S-6		RSAS6-39B	39			X	X	X	X		X	X	X	X	X	X			X						
S-7	RSAS7	RSAS7-0.0B	0.0																			X			Boring located upgradient of WAPA site, for general area-wide coverage and not associated with a specific LOU. PCBs
S-7		RSAS7-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X						and TPH-DRO/ORO added to SAP to evaluate for potential impacts from WAPA site per NDEP.
S-7		RSAS7-0.5BD	0.5 (dup)			X	X	X	X		X	X	X	X	X	X		X	X						GW anticipated at ~44 feet bgs.
S-7		RSAS7-10B	10			X	X	X	X		X	X	X	Hold	X				X						
S-7		RSAS7-25B	25			X	X	X	X		X	X	X	Hold	X				X						
S-7		RSAS7-42B	42			X	X	X	X		X	X	X	X	X	X			X						
T-3	RSAT3	RSAT3-0.0B	0.0																			X			Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Random boring adjacent
T-3		RSAT3-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X						to LOU 59 piping to evaluate potential piping releases.
T-3		RSAT3-10B	10			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~55 feet bgs.
T-3		RSAT3-10B	10	X		X	X	X	X		X	X	X	Hold	X				X						
T-3		RSAT3-25B	25			X	X	X	X		X	X	X	Hold	X				X						
T-3		RSAT3-40B	40			X	X	X	X		X	X	X	Hold	X				X						
T-3		RSAT3-53B	53			X	X	X	X		X	X	X	X	X				X						
T-4	RSAT4	RSAT4-0.0B	0.0																			X			Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Random boring adjacent
T-4		RSAT4-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X						to LOU 59 piping to evaluate potential piping releases
T-4		RSAT4-10B	10			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~55 feet bgs.
T-4		RAST4-25B	25			X	X	X	X		X	X	X	Hold	X				X						
T-4		RSAT4-40B	40			X	X	X	X		X	X	X	Hold	X				X						
T-4		RSAT4-53B	53			X	X	X	X		X	X	X	X	X				X						
T-4	SA119	SA119-0.0B	0.0																			X			Boring located to evaluate LOU 59 (Storm Sewer System) adjacent to former State Industries building (Building T-5) and
T-4		SA119-0.5B	0.5			X	X	X	X		X	X	X	X	X	X	X	X	X	X	X				LOU 62 (State Industries, Inc. Site). Located adjacent to LOU 59 piping and manhole/inlet where waste water from the
T-4		SA119-10B	10			X	X	X	X		X	X	X	X	X				X	X	X				surface impoundments associated with LOU 62 was released to, as well as for general coverage for LOU 62 (on and off
T-4		SA119-30B	30			X	X	X	X		X	X	X	Hold	X				X						Tronox site). GW anticipated at ~50 feet bgs.
T-4		SA119-48B	48			X	X	X	X		X	X	X	X	X	X	X		X	X	X				
T-5	RSAT5	RSAT5-0.0B	0.0																			X			Boring located approximately 200 feet west of Tronox Purchasing/Training Building to evaluate soils for general area-
T-5		RSAT5-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X						wide coverage and not associated with a specific LOU.
T-5		RSAT5-10B	10			X	X	X	X		X	X	X	Hold	X				X						GW anticipated at ~53 feet bgs.
T-5		RSAT5-25B	25			X	X	X	X		X	X	X	Hold	X				X						
T-5		RSAT5-40B	40			X	X	X	X		X	X	X	Hold	X				X						
T-5		RSAT5-51B	51			X	X	X	X		X	X	X	X	X				X						
T-5	SA115	SA115-0.0B	0.0																			X			Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Located adjacent to LOU
T-5		SA115-0.5B	0.5			X	X	X	X		X	X	X		X			X	X						59 piping and manhole/inlet to evaluate high risk piping release locations (piping and inlet structure).
T-5		SA115-10B	10			X	X	X	X		X	X	X		X				X						GW anticipated at ~53 feet bgs.
T-5		SA115-10Bd	10 (dup)			X	X	X	X		X	X	X		X				X						
T-5		SA115-25B	25			X	X	X	X		X	X	X		X				X						
T-5		SA115-40B	40			X	X	X	X		X	X	X		X				X						
T-5		SA115-51B	51			X	X	X	X		X	X	X		X				X						

Table 2 (Field Version)
Soil Sampling and Analytical Plan for Area IV
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

Laboratory :						CAS Kelso, WA		Columbia Analytical Services Rochester, NY										CAS Houston, TX		GEL Charleston, SC	STL Denver, CO	Alpha Analytical Sparks, NV	EMSL Westmont, NJ	PTS Santa Fe Springs, CA	Location Description and Characterized Area Rationale (NDEP may not agree with upgradient and downgradient descriptions.)
Grid Location	Phase B Boring No.	Sample ID Number	Sample Depths[1.] (ft, bgs)	Matrix Spike/MSD uplicate	SPLP Sample	Perchlorate (EPA 314.0)	Metals[2.] (EPA 6020)	Hex Cr[4.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH GRO (EPA 8015B)	VOCs[3.] (EPA 8260B)	Wet Chem[5.]	Total Cyanide (EPA 9012A)	OCPs[6.] (8081A)	SVOCs[7.] (EPA 8270C)	PCBs[8.] (EPA 8082)	PCBs[8.] (EPA 1668A)	Dioxins/ Furans[9.]	Radio-nuclides[10.]	OPPs[11.]	Organic Acids[12.]	Asbestos[13.] EPA/540/R-97/028	Geotechnical Tests	
Number of Containers per Sample:						1 - 4 oz Jar		1 - 4 oz Jar		1- 40 ml VOA vial w/ methanol	3 VOA vials (TerraCore Kit)	2 - 4 oz. Jars					1 - 4 oz Jar		1-250 ml jar (plastic)	1-4 oz Jar	1-4 oz Jar	≥1 kg in plastic bag	2 Brass Tubes	
Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area IV (P-4) and ending with the southeastern most grid in Area IV (U-7).																									
T-5	SA116	SA116-0.0B	0.0																			X		Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Located adjacent to LOU
T-5		SA116-0.5B	0.5			X	X	X	X		X	X	X		X			X	X					59 piping for general coverage and adjacent to SG68 for VOC comparison purposes.
T-5		SA116-10B	10			X	X	X	X		X	X	X		X				X					GW anticipated at ~52 feet bgs.
T-5		SA116-30B	30			X	X	X	X		X	X	X		X				X					
T-5		SA116-50B	50			X	X	X	X		X	X	X		X				X					
T-5		SA116-50B	50	X		X	X	X	X		X	X	X		X				X					
T-6	RSAT6	RSAT6-0.0B	0.0																			X		Boring located to evaluate soils for general area-wide coverage and not associated with a specific LOU. PCBs and TPH-
T-6		RSAT6-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X					DRO/ORO added to SAP to evaluate for potential impacts from WAPA site per NDEP.
T-6		RSAT6-10B	10			X	X	X	X		X	X	X	Hold	X				X					GW anticipated at ~51 feet bgs.
T-6		RSAT6-30B	30			X	X	X	X		X	X	X	Hold	X				X					
T-6		RSAT6-49B	49			X	X	X	X		X	X	X	X	X				X					
T-6	SA118	SA118-0.0B	0.0																			X		Boring located to evaluate LOU 59 (Storm Sewer System). Random boring adjacent to LOU 59 piping to evaluate
T-6		SA118-0.5B	0.5			X	X	X	X		X	X	X		X			X	X					potential high risk piping releases.
T-6		SA118-10B	10			X	X	X	X		X	X	X		X				X					GW anticipated at ~53 feet bgs.
T-6		SA118-25B	25			X	X	X	X		X	X	X		X				X					
T-6		SA118-40B	40			X	X	X	X		X	X	X		X				X					
T-6		SA118-51B	51			X	X	X	X		X	X	X		X				X					
T-7	RSAT7	RSAT7-0.0B	0.0																			X		Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Random boring adjacent
T-7		RSAT7-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X					to LOU 59 piping to evaluate potential piping releases. PCBs and TPH-DRO/ORO added to SAP to evaluate for potential
T-7		RSAT7-10B	10			X	X	X	X		X	X	X	Hold	X				X					impacts from WAPA site per NDEP.
T-7		RSAT7-25B	25			X	X	X	X		X	X	X	Hold	X				X					GW anticipated at ~46 feet bgs.
T-7		RSAT7-44B	44			X	X	X	X		X	X	X	X	X	X			X					
T-7		RSAT7-44B	44	X		X	X	X	X		X	X	X	X	X	X			X					
T-8	RSAT8	RSAT8-0.0B	0.0																			X		Boring located to evaluate LOU 59 (Storm Sewer System) and for general area-wide coverage. Random boring adjacent
T-8		RSAT8-0.5B	0.5			X	X	X	X		X	X	X	X	X	X		X	X					to LOU 59 piping and manhole/inlet to evaluate potential releases (piping and inlet). PCBs and TPH-DRO/ORO added to
T-8		RSAT8-10B	10			X	X	X	X		X	X	X	Hold	X				X					SAP to evaluate for potential impacts from WAPA site per NDEP.
T-8		RSAT8-25B	25			X	X	X	X		X	X	X	Hold	X				X					GW anticipated at ~46 feet bgs.
T-8		RSAT8-25BD	25 (dup)			X	X	X	X		X	X	X	Hold	X				X					
T-8		RSAT8-44B	44			X	X	X	X		X	X	X	X	X	X			X					
T-8	SA210	SA210-0.0B	0.0																			X		Boring located to evaluate LOU 59 (storm Sewer System). Located areally to evaluate point of exit from the Tronox site
T-8		SA210-0.5B	0.5			X	X	X	X		X	X	X		X	X		X	X					rather than at a worst-case scenario.
T-8		SA210-10B	10			X	X	X	X		X	X	X		X				X					GW anticipated at ~51 feet bgs.
T-8		SA210-30B	30			X	X	X	X		X	X	X		X				X					
T-8		SA210-49B	49			X	X	X	X		X	X	X		X	X			X					
U-4	RSAU4	RSAU4-0.0B	0.0																			X		Boring located to evaluate former western pond in LOU 62 (State Industries, Inc. Site). Located within footprint and in the
U-4		RSAU4-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X					center of the former pond to provide general coverage of pond area for potential releases (see LOU 62 summary for
U-4		RSAU4-10B	10			X	X	X	X		X	X	X	Hold	X				X					details). GW anticipated at ~58 feet bgs.
U-4		RSAU4-20B	20		X	X	X	X			X	X	X	X	X	X	X		X	X	X		X	20-Foot SPLP sample must be of Quaternary Alluvium (Qal) soils.
U-4		RSAU4-25B	25			X	X	X	X		X	X	X	Hold	X				X					
U-4		RSAU4-40B	40			X	X	X	X		X	X	X	Hold	X				X					
U-4		RSAU4-50B	50		X	X	X	X			X	X	X	X	X	X	X		X	X	X		X	SPLP sample must be of Muddy Creek soils & must be dry. If soils not dry, don't collect sample. Choose another boring.
U-4		RSAU4-56B	56			X	X	X	X		X	X	X	X	X				X					
U-4	SA146	SA146-0.0B	0.0																			X		Boring located to evaluate former eastern pond in LOU 62 (State Industries, Inc. Site). Located within footprint of former
U-4		SA146-0.5B	0.5			X	X	X	X		X	X	X		X			X	X					pond to provide general coverage of pond area for potential releases (see LOU 62 summary for details).
U-4		SA146-10B	10			X	X	X	X		X	X	X		X				X					GW anticipated at ~57 feet bgs.
U-4		SA146-25B	25			X	X	X	X		X	X	X		X				X					
U-4		SA146-25BD	25 (dup)			X	X	X	X		X	X	X		X				X					
U-4		SA146-40B	40			X	X	X	X		X	X	X		X				X					
U-4		SA146-55B	55			X	X	X	X		X	X	X		X				X					
U-4	SA147	SA147-0.0B	0.0																			X		Boring located to evaluate former eastern pond in LOU 62 (State Industries, Inc. Site). Located within footprint of former
U-4		SA147-0.5B	0.5			X	X	X	X		X	X	X		X			X	X					pond to provide general coverage of pond area for potential releases (see LOU 62 summary for details).
U-4		SA147-10B	10			X	X	X	X		X	X	X		X				X					GW anticipated at ~58 feet bgs.
U-4		SA147-25B	25			X	X	X	X		X	X	X		X				X					
U-4		SA147-25BD	25 (dup)			X	X	X	X		X	X	X		X				X					
U-4		SA147-40B	40			X	X	X	X		X	X	X		X				X					
U-4		SA147-56B	56			X	X	X	X		X	X	X		X				X					
U-5	RSAU5	RSAU5-0.0B	0.0																			X		Boring located to evaluate former eastern pond in LOU 62 (State Industries, Inc. Site). Located within footprint of former
U-5		RSAU5-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X					pond to provide general coverage of pond area for potential releases (see LOU 62 summary for details).
U-5		RSAU5-0.5B	0.5		X	X	X	X			X	X	X	X	X	X	X		X	X	X		X	0.5-Foot SPLP sample must be of Quaternary Alluvium (Qal) soils.
U-5		RSAU5-10B	10			X	X	X	X		X	X	X	Hold	X				X					GW anticipated at ~57 feet bgs.
U-5		RSAU5-25B	25			X	X	X	X		X	X	X	Hold	X				X					
U-5		RSAU5-40B	40			X	X	X	X		X	X	X	Hold	X				X					
U-5		RSAU5-50B	50		X	X	X	X			X	X	X	X	X	X	X		X	X	X		X	SPLP sample must be of Muddy Creek soils & must be dry. If soils not dry, don't collect sample. Choose another boring.
U-5		RSAU5-55B	55			X	X	X	X		X	X	X	X	X				X					
U-5	SA28	SA28-0.0B	0.0																			X		Boring located to evaluate former eastern pond in LOU 62 (State Industries, Inc. Site). Located within footprint and in the
U-5		SA28-0.5B	0.5			X	X	X	X		X	X	X		X			X	X					center of the former pond to provide general coverage of pond area for potential releases (see LOU 62 summary for
U-5		SA28-10B	10			X	X	X	X		X	X	X		X				X					details). GW anticipated at ~57 feet bgs.
U-5		SA28-10B	10D			X	X	X	X		X	X	X		X				X					
U-5		SA28-25B	25			X	X	X	X		X	X	X		X				X					
U-5		SA28-40B	40			X	X	X	X		X	X	X	X	X				X					
U-5		SA28-55B	55			X	X	X	X		X	X	X		X				X					
U-6	RSAU6	RSAU6-0.0B	0.0																			X		Boring located to evaluate soil for area-wide coverage and not associated with a specific LOU.
U-6		RSAU6-0.5B	0.5			X	X	X	X		X	X	X	X	X			X	X					GW anticipated at ~55 feet bgs.
U-6		RSAU6-0.5B	0.5	X		X	X	X	X		X	X	X	X	X			X	X					
U-6		RSAU6-10B	10			X	X	X	X		X	X	X	Hold	X				X

Table 2 (Field Version)
Soil Sampling and Analytical Plan for Area IV
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

Laboratory :						CAS Kelso, WA		Columbia Analytical Services Rochester, NY									CAS Houston, TX		GEL Charleston, SC	STL Denver, CO	Alpha Analytical Sparks, NV	EMSL Westmont, NJ	PTS Santa Fe Springs, CA	Location Description and Characterized Area Rationale (NDEP may not agree with upgradient and downgradient descriptions.)
Grid Location	Phase B Boring No.	Sample ID Number	Sample Depths[1.] (ft, bgs)	Matrix Spike/MSD uplicate	SPLP Sample	Perchlorate (EPA 314.0)	Metals[2.] (EPA 6020)	Hex Cr[4.] (EPA 7199)	TPH-DRO/ORO (EPA 8015B)	TPH GRO (EPA 8015B)	VOCs[3.] (EPA 8260B)	Wet Chem[5.]	Total Cyanide (EPA 9012A)	OCPs[6.] (8081A)	SVOCs[7.] (EPA 8270C)	PCBs[8.] (EPA 8082)	PCBs[8.] (EPA 1668A)	Dioxins/ Furans[9.]	Radio-nuclides[10.]	OPPs[11.]	Organic Acids[12.]	Asbestos[13.] EPA/540/R-97/028	Geotechnical Tests	
Number of Containers per Sample:						1 - 4 oz Jar		1 - 4 oz Jar		1- 40 ml VOA vial w/ methanol	3 VOA vials (TerraCore Kit)	2 - 4 oz. Jars					1 - 4 oz Jar		1-250 ml jar (plastic)	1-4 oz Jar	1-4 oz Jar	≥1 kg in plastic bag	2 Brass Tubes	
Borings are organized by grid location as shown on Plate A - Starting point is on the northwestern most grid in Area IV (P-4) and ending with the southeastern most grid in Area IV (U-7).																								
U-7		RSAU7-54B	54			X	X	X	X		X	X	X	X	X				X					
	56 = Number of Borings																							

Notes:

X	Sample will be collected and analyzed.
	No sample will be collected under Phase B sampling program.
DD*	Sample depth to be determined in the field where DD = sample depth (ft).
TPH-GRO	Total petroleum hydrocarbons - Gasoline-Range Organics.
TPH-DRO/ORO	Total petroleum hydrocarbons - Diesel-Range Organics/Oil-Range Organics.
SPLP	SPLP samples will be analyzed by EPA method 1312 using two preparation methods: 1) with extraction fluid #2 (reagent water at pH 5.00.05), and 2) with extraction method #3 (reagent water); per NDEP, May 6, 2008.
1.	The 0.5 ft bgs sample will be collected from the 0.0 to 0.5 ft bgs interval, unless the area is paved. If area is paved, samples will be collected at 0.5 feet below or from a representative depth beneath the pavement. Alternately, if an unpaved area is within a reasonable distance, the sample will be moved to the unpaved area.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybednum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thalium, Tungsten, Uranium, Vanadium, and Zinc.
3.	Hexavalent Chromium
4.	Samples for VOC analysis will be preserved in the field using sodium bisulfate (or DI water) and methanol preservatives per EPA Method 5035.
5.	Wet chemistry parameters include: alkalinity (total, CO_3 HCO_3), ammonia, bromide, chlorate, chloride, conductivity, nitrate, nitrite, perchlorate, pH, phosphate (total), sulfate, surfactants (MBAs), TDS, Total Organic Carbon, and TSS.
6.	Organochlorine Pesticides (includes analysis for hexachlorobenzene).
7.	Semi-volatile Organic Compounds
8.	Polychlorinated biphenyls - Sample locations will be analyzed by USEPA methods 8082 and/or 1668A as indicated in table. Concrete surfaces at these locations will also include chip and/or wipe samples per EPA Region 1 SOP for Sampling Concrete in the Field (1997). A column for Aroclor PCBs (EPA 8082) was added to this table to show which samples will be analyzed for Aroclor PCBs.
9.	Dioxins/furans will be analyzed by EPA Method 8290 for all samples. Screening reports will be provided for 90% of the samples and full data packages for 10% of the samples.
10.	Radionuclides consists of alpha spec reporting for isotopic thorium and isotopic uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
11.	Organophosphorous Pesticides were added to SAP by NDEP (July 21, 2008).
12.	Organic Acid analysis includes the following analytes: 4-Chlorbenzene sulfonic acid; Benzenesulfonic acid; O,O-Diethylphosphorodithioic acid; O,O-Dimethylphosphorodithioic acid; and Phthalic acid.
13.	Soil samples for asbestos analyses will be collected from a depth of 0 to 2-inches bgs.
14.	Geotechnical Tests consist of: moisture content (ASTM D-2216), grain size analysis (ASTM D-422 and C117-04), Soil Dry Bulk Density (ASTM D-2937), Grain Density (ASTM D-854), Soil-Water Filled Porosity (ASTM D-2216); Vertical Hydraulic Conductivity (ASTM D-5084/USEPA 9100).

Table 3
Groundwater Sampling and Analysis Plan for Area IV
Phase B Source Area Investigation Work Plan
Tronox Facility - Henderson, Nevada

							Laboratory [E.] :	CAS - Kelso, WA	CAS - Rochester, NY							GEL Charleston, SC	CAS - Houston	STL-Denver	Alpha Analytical Sparks, NV	Rationale for Revision	Location Description and Rationale for Investigation
Grid Location	Location Area	Monitoring Well No.	Sample ID Number [K.]	Screen Interval (ft bgs)	Soil Type Expected Across Screen Interval [1.]	Well Sampled for Phase A? (y/n)	Perchlorate (EPA 314.0)	Metals [2.]	VOCs [3.] (EPA 8260)	Hex Cr [4.] (EPA 7199)	Wet Chemistry [5.]	OCPs [6.] (EPA 8081A)	Total Cyanide (EPA 9012A)	SVOCs [7.] (EPA 8270C)	PCBs [8,L] (EPA 8082)	Radionuclides [9.]	PCBs [8,L] (EPA 1668A)	OPPs [10, A] (EPA 8141A)	Organic Acids [B]		
Wells are organized by grid location as shown on Plate A - Starting point is on the northwestern-most grid in Area 4 (P-2) and ending with the southeastern-most grid covering Area 4 (W-7).																					

Notes:

*	Well completion information or boring log not available. Soil type inferred from nearby wells and geologic cross-section provided in the Phase A Source Area Investigation Report (ENSR, 2007).
X	Sample will be collected and analyzed.
blank	No sample collected under Phase B sampling plan.
1.	It is anticipated that the large majority of the flow to the well will be from the coarse-grained sediments. As such, in the cases where there are two lithologies present across the screen interval, the water sampled will represent conditions in the coarse-grained interval.
2.	Metals analyses includes Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Platinum, Potassium, Selenium, Silver, Sodium, Strontium, Tin, Titanium, Thallium, Tungsten, Uranium, Vanadium, and Zinc.
3.	VOCs = Volatile organic compounds (to include analysis for naphthalene)
4.	Hexavalent Chromium.
5.	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
6.	OCPs = Organochlorine pesticides (to include analysis for hexachlorobenzene).
7.	SVOCs = Semi volatile organic compounds.
8.	Polychlorinated Biphenyls.
9.	Radionuclides consists of alpha spec reporting for isotopic Thorium and isotopic Uranium, and Radium-226, plus Radium-228 by beta counting (per NDEP).
10.	OPPs = Organophosphorous Pesticides
TBD	To Be Determined when well is constructed.
Qal	Quaternary Alluvium.
MCfg1	Muddy Creek Formation - first fine-grained facies
MCcg1	Muddy Creek Formation - first coarse-grained facies
MCfg2	Muddy Creek Formation - second fine-grained facies
(a)	Complete list of wet chemistry parameters are shown on Table 1. All groundwater samples will have pH measured in the field.
X	Green-shading indicates items that have been added or changed from Table 3 in the May 2008 Area IV Work Plan originally reviewed by NDEP.
R	Brown-shading indicates items that have been removed from Table 3 in the May 2008 Area IV Work Plan originally reviewed by NDEP.
A	OPPs were added per NDEP (July 21, 2008).
B	Organic Acids were added per NDEP (July 21, 2008).
C	Well was added to evaluate groundwater coming onto Tronox from the west.
D	Well was removed from Table 3 because this well is not located in Area IV.
E	Laboratory information was added to Table 3 to assist field sampling personnel in shipping the sample containers to the appropriate laboratory.
F	Total cyanide was added per NDEP (July 21, 2008).
G	VOCs analysis will be added to these samples as they were inadvertently left off of the Table 3 that was reviewed by NDEP.
H	Grid code was listed incorrectly
I	Location area was revised to reflect the name of the parcel. The parcel is a part of area IV
J	NDEP requested that soil types be inclusive of all types encountered across screening depth, boring logs were reviewed to ensure correct soil types are listed.
K	Sample ID was added to convey sample ID nomenclature to field sampling team ("B" suffix denotes sample is associated with Phase B sampling event).
L	PCB columns were added per NDEP (May 6, 2008)
