# Laboratory Data Consultants, Inc. Data Validation Report

**Project/Site Name:** 

Tronox LLC Facility, 2009 Phase B Investigation,

Henderson, Nevada

**Collection Date:** 

May 21, 2009

LDC Report Date:

September 21, 2009

Matrix:

Water

Parameters:

Dissolved Hexavalent Chromium

Validation Level:

Stage 2B

Laboratory:

Columbia Analytical Services, Inc.

Sample Delivery Group (SDG): R0902886

Sample Identification

MC-3B-FILT

#### Introduction

This data review covers one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 218.6 for Dissolved Hexavalent Chromium.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

#### a. Initial Calibration

All criteria for the initial calibration were met.

#### b. Calibration Verification

Calibration verification frequency and analysis criteria were met.

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No hexavalent chromium was found in the initial, continuing and preparation blanks.

Sample MC-3B-FILT was identified as a filter blank. No hexavalent chromium was found in this blank.

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0902886	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

#### VIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

#### IX. Field Duplicates

No field duplicates were identified in this SDG.

#### Introduction

This data review covers 6 water samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, Nitrite as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA Method 120.1 for Conductivity, EPA SW 846 Method 9012A for Cyanide, EPA Method 218.6 for Dissolved Hexavalent Chromium, EPA SW 846 Method 9040B for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, Standard Method 2540C for Total Dissolved Solids, Standard Method 2540D for Total Suspended Solids, and EPA SW 846 Method 9060 for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

#### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### \*I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
MC-3B EB052709	Bromide	42 days	28 days	J- (all detects) UJ (all non-detects)	A
MC-3B	Cyanide	15 days	14 days	J- (all detects) UJ (all non-detects)	А
MC-3B	Nitrite as N (353.2)	7 days	48 hours	J- (all detects) R (all non-detects)	Р
M-127B	Nitrite as N (353.2)	6 days	48 hours	J- (all detects) R (all non-detects)	Р
EB052709	рН	50 hours	48 hours	J (all detects) UJ (all non-detects)	Р
*FB060409	Nitrite as N (9056) Nitrate as N (9056)	5 days 5 days	48 hours 48 hours	J- (all detects) R (all non-detects) J- (all detects) R (all non-detects)	А

<sup>\*</sup>Corrected Total Time and Holding Time for FB030409

All samples were received in good condition with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
M-127B	Cyanide	Analysis was performed on unpreserved sample (pH was 11 units).	Analysis must be performed on an preserved aliquot at ≥12 pH units.	J- (all detects) R (all non-detects)	Р

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
5/29/09	CCV (9:17)	Nitrite as N (9056)	112.3 (90-110)	MC-3B EB052709	J+ (all detects)	Р
5/29/09	CCV (13:01)	Nitrite as N (9056)	110.7 (90-110)	MC-3B EB052709	J+ (all detects)	Р

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Alkalinity, total Alkalinity, bicarbonate	1.9 mg/L 1.9 mg/L	All samples in SDG R0903006
ICB/CCB	Alkalinity, total	1.9 mg/L	All samples in SDG R0903006
МВ	Total phosphorus	0.01 mg/L	MC-3B EB052709 M-127B
ІСВ/ССВ	Total phosphorus	0.01 mg/L	MC-3B EB052709 M-127B
МВ	Chloride Nitrate as N	0.11 mg/L 0.090 mg/L	M-127B
ICB/CCB	Chloride	0.110 mg/L	M-127B
МВ	Total phosphorus Chloride	0.015 mg/L 0.06 mg/L	FB060409
ICB/CCB	Total phosphorus Chloride	0.015 mg/L 0.06 mg/L	FB060409

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
EB052709	Alkalinity, total	1.9 mg/L	2.0U mg/L
	Alkalinity, bicarbonate	1.9 mg/L	2.0U mg/L
	Total phosphorus	0.01 mg/L	0.05U mg/L
M-127B	Total phosphorus	0.042 mg/L	0.05U mg/L
FB060409	Alkalinity, total	1.9 mg/L	2.0U mg/L
	Alkalinity, bicarbonate	1.9 mg/L	2.0U mg/L
	Total phosphorus	0.020 mg/L	0.05U mg/L

Sample EB052709 was identified as an equipment blank. No contaminant concentrations were found in this blank with the following exceptions:

Equipment Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
EB052709	5/27/09	Alkalinity, total Alkalinity, bicarbonate Total organic carbon Conductivity pH Total phosphorus	1.9 mg/L 1.9 mg/L 0.3 mg/L 2.47 umhos/cm 5.99 units 0.01 mg/L	МС-ЗВ

Sample FB060409 was identified as a field blank. No contaminant concentrations were found in this blank with the following exceptions:

Field Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
FB060409	6/4/09	Alkalinity, total Alkalinity, bicarbonate Ammonia as N Total organic carbon Conductivity pH Total phosphorus	1.9 mg/L 1.9 mg/L 0.102 mg/L 0.4 mg/L 1.81 umhos/cm 6.08 units 0.020 mg/L	MC-3B M-127B

Sample MC-3B-FILT (from SDG R0902886) was identified as a filter blank. No contaminant concentrations were found in this blank.

Sample concentrations were compared to concentrations detected in the field blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
мс-зв	Ammonia as N	0.537 mg/L	0.537J+ mg/L
M-127B	Ammonia as N Total phosphorus	0.030 mg/L 0.042 mg/L	0.050U mg/L 0.050U mg/L

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

#### VIII. Sample Result Verification and Project Quantitation Limit

All sample result verifications were acceptable.

The project quantitation limits were met with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
MC-3B EB052709 M-127B FB060409	Nitrite as N (9056)	Laboratory reporting limit reported at 0.012 mg/L.	PQL should be reported at 0.010 mg/L per the QAPP.	None	Р

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903006	All analytes reported below the PQL.	J (all detects)	A

#### IX. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Sample	Compound	Flag	A or P
MC-3B M-127B	Nitrite as N (353.2)	х	A

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

No field duplicates were identified in this SDG.

#### Introduction

This data review covers 5 sediment and one water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA Method 1668B for Polychlorinated Biphenyls as Congeners.

This review follows the Project Procedures Manual, U.S. Navy Environmental Restoration Program NAVFAC Pacific (DON 2007) and the U.S. Department of Defense Quality Systems Manual for Environmental Laboratories, Version 4.1 (April 2009).

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XIV.

Samples indicated by a double asterisk on the front cover underwent a Full review. A Standard review was performed on all of the other samples. Raw data were not evaluated for the samples reviewed by Standard criteria since this review is based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

# Initial and Continuing Calibration Calculation Verification Validatin Findings Worksheet

2nd Reviewer: Reviewer: Page:

Method: Inorganics, Method

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula: The correlation coefficient (r) for the calibration of  $\mathbb{C}_{\theta} \mathcal{C}$  was recalculated.Calibration date:  $\mathcal{V}(\mathcal{V}_{\theta})$ 

%R = Found X 100

Where,

Found = concentration of each analyte measured in the analysis of the ICV or CCV solution

True = concentration of each analyte in the ICV or CCV source

Time of a males					Recalculated	Reported	Acceptable
ype or analysis	Analyte	Standard	Conc. (ug/L)	Area	r or r²	r or r²	(X/X)
Initial calibration		s1	0	. 0

# VALIDATION FINDINGS WORKSHEET Level IV Recalculation Worksheet

Reviewer: Page:

METHOD: Inorganics, Method \_\_\_\_\_\_\_

Percent recoveries (%A) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

%R = Found × 100 Where. True

Found \*

True m

concentration of each analyte <u>measured</u> in the analysis of the sample, For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result), concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = 18-D1 × 100 Where, (S+D)/2

# # ⊘ Q

#### Introduction

This data review covers 20 soil samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA Method 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
6/5/09	ccv	Total organic carbon	89.1 (90-110)	RSA12-0.5B RSAI3-0.5B RSAJ5-0.5B RSAK5-0.5B SA76-0.5B SA76009-0.5B RSAL3-0.5B SA100-0.5B RSAM3-0.5B	J- (all detects) UJ (all non-detects)	Р

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
RSA12-0.5BDUP (All samples in SDG R0903051)	Chlorate	34 (≤20)	-	J (all detects) UJ (all non-detects)	А

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Surrogate	%R (Limits)	Analyte	Flag	A or P
RSAJ3-0.5B	Dichloroacetate	72.4 (90-115)	Chlorate	J- (all detects) UJ (all non-detects)	Р

#### VIII. Sample Result Verification and Project Quantitation Limit

The project quantitation limits were met with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
RSA12-0.5B RSAI3-0.5B RSAJ5-0.5B RSAK5-0.5B SA76-0.5B SA76009-0.5B RSAL3-0.5B SA100-0.5B RSAM3-0.5B	Nitrite as N	Laboratory reporting limit reported at 1.2 mg/Kg.	PQL should be reported at 0.1 mg/Kg per the QAPP.	None	Р

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903051	All analytes reported below the PQL.	J (all detects)	А

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

The overall assessment of data was acceptable with the following exceptions:

Sample	Analyte	
SA76-0.5B SA76009-0.5B SA100-0.5B SA189-0.5B SA88-0.5B	Cyanide analysis was not performed for these samples.	

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

Samples SA76-0.5B and SA76009-0.5B and samples SA152-0.5B and SA152009-0.5B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

Sample Identification

H-28AB

AW-BW-02B

M-142B

M-130B

M-29B

#### Introduction

This data review covers 5 water samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA Method 120.1 for Conductivity, EPA SW 846 Method 9012A for Cyanide, EPA Method 218.6 for Dissolved Hexavalent Chromium, EPA SW 846 Method 9040B for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, Standard Method 2540C for Total Dissolved Solids, Standard Method 2540D for Total suspended Solids, and EPA SW 846 Method 9060 for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

#### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### I. Technical Holding Times

All technical holding time requirements were met.

All samples were received in good condition with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
H-28AB	Cyanide	Analysis was performed on unpreserved sample (pH was 10 units).	Analysis must be performed on a preserved aliquot at ≥12 pH units.	J- (all detects) R (all non-detects)	Р

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
7/2/09	CCV (22:09)	Bromide	174 (90-110)	M-29B	R (all detects)	Р
6/13/09	CCV beginning	Surfactants	114 (90-110)	M-142B	J+ (all detects)	Р
6/13/09	CCV closing	Surfactants	114 (90-110)	M-142B	J+ (all detects)	Р
6/17/09	CCV closing	Surfactants	89 (90-110)	M-29B	J- (all detects) UJ (all non-detects)	P

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Alkalinity, total Alkalinity, bicarbonate	1.0 mg/L 1.0 mg/L	All samples in SDG R0903243
ICB/CCB	Alkalinity, total	1.0 mg/L	All samples in SDG R0903243

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Bromide	0.08 mg/L	H-28AB

МВ	Nitrate as N	0.066 mg/L	M-130B
МВ	Chloride	0.1 mg/L	M-29B

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
H-28AB	Bromide	0.9 mg/L	1.0U mg/L
M-29B	Bromide	1 mg/L	1.0U mg/L

Sample FB060409 (from SDG R0903006) was identified as a field blank. No contaminant concentrations were found in this blank with the following exceptions:

Field Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
FB060409	6/4/09	Alkalinity, total Alkalinity, bicarbonate Ammonia as N Total organic carbon Conductivity pH Total phosphorus	1.9 mg/L 1.9 mg/L 0.102 mg/L 0.4 mg/L 1.81 umhos/cm 6.08 units 0.020 mg/L	H-28AB AW-BW-02B M-142B M-130B

Sample MC-3B-FILT (from SDG R0902886) was identified as a filter blank. No contaminant concentrations were found in this blank.

Sample concentrations were compared to concentrations detected in the field blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
H-28AB	Ammonia as N	0.325 mg/L	0.325J+ mg/L
AW-BW-02B	Ammonia as N	0.015 mg/L	0.050U mg/L
M-142B	Ammonia as N	0.097 mg/L	0.097J+ mg/L
M-130B	Ammonia as N	0.709 mg/L	0.709J+ mg/L

#### IV. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) analyses specified for the samples in this SDG, and therefore matrix spike analyses were not performed for this SDG.

#### V. Duplicates

The laboratory has indicated that there were no duplicate (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed for this SDG.

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

#### VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Sample Finding		A or P
All samples in SDG R0903243	All analytes reported below the PQL.	J (all detects)	А

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

No field duplicates were identified in this SDG.

### Introduction

This data review covers 13 water samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA Method 120.1 for Conductivity, EPA SW 846 Method 9012A for Cyanide, EPA Method 218.6 for Dissolved Hexavalent Chromium, EPA SW 846 Method 9040B for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, Standard Method 2540C Total Dissolved Solids, Standard Method 2540D for Total Suspended Solids, and EPA SW 846 Method 9060 for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

## The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
M-19BRE	Nitrate as N	53 hours	48 hours	J- (all detects) UJ (all non-detects)	А
M-34BRE	Nitrate as N	48.75 hours	48 hours	J- (all detects) UJ (all non-detects)	Α
H-38B	Hexavalent chromium	24.5 hours	24 hours	J- (all detects) UJ (all non-detects)	Р
M-19B	Hexavalent chromium	75.25 hours	24 hours	J- (all detects) R (all non-detects)	Р
M-34B	Hexavalent chromium	72.5 hours	24 hours	J- (all detects) R (all non-detects)	Р

All samples were received in good condition with the following exceptions:

Sample	Analyte	Finding	Criteria	Flag	A or P
M-125B	Cyanide	Analysis was performed on unpreserved sample (pH was 7 units).	Analysis must be performed on a preserved aliquot at ≥12 pH units.	J- (all detects) R (all non-detects)	Р

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

## II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
7/2/09	CCV (22:09)	Bromide	174 (90-110)	M-19B	R (all detects)	Р
6/25/09	CCV beginning	Surfactants	112 (90-110)	M-22AB M-17AB	J+ (all detects)	Р

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
6/25/09	CCV closing	Surfactants	112 (90-110)	M-22AB M-17AB	J+ (all detects)	Р

## III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Alkalinity, total Alkalinity, bicarbonate	1.0 mg/L 1.0 mg/L	M-78B
ICB/CCB	Alkalinity, total	1.0 mg/L	M-78B M-128B H-38B M-19B M-34B M-125B M-22AB M-17AB
МВ	Total dissolved solids	7 mg/L	M-78B M-128B H-38B M-19B M-34B
МВ	Total phosphorus	0.013 mg/L	M-78B M-128B H-38B
МВ	Total phosphorus	0.008 mg/L	M-19B M-34B M-125B M-22AB M-17AB
ICB/CCB	Total phosphorus	0.013 mg/L	M-78B M-128B H-38B
ICB/CCB	Total phosphorus	0.008 mg/L	M-19B M-34B M-125B M-22AB M-17AB

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Chloride Nitrate as N	0.1 mg/L 0.063 mg/L	M-78B
МВ	Bromide	0.06 mg/L	M-19B
МВ	Chloride	0.1 mg/L	M-19B M-34B
ICB/CCB	Chloride	0.1 mg/L	M-19B M-34B
ICB/CCB	Nitrate as N	0.062 mg/L	M-19BRE M-34BRE
ICB/CCB	Chloride	0.095 mg/L	M-125B

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
M-78B	Total phosphorus	0.032 mg/L	0.050U mg/L
M-19B	Total phosphorus Bromide	0.022 mg/L 0.9 mg/L	0.050U mg/L 1.0U mg/L
M-34B	Total phosphorus	0.032 mg/L	0.050U mg/L
M-125B	Total phosphorus	0.032 mg/L	0.050U mg/L
M-22AB	Total phosphorus	0.044 mg/L	0.050U mg/L
M-17AB	Total phosphorus	0.037 mg/L	0.050U mg/L

Sample FB060409 (from SDG R0903006) was identified as a field blank. No contaminant concentrations were found in this blank with the following exceptions:

Field Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
FB060409	6/4/09	Alkalinity, total Alkalinity, bicarbonate Ammonia as N Total organic carbon Conductivity pH Total phosphorus	1.9 mg/L 1.9 mg/L 0.102 mg/L 0.4 mg/L 1.81 umhos/cm 6.08 units 0.020 mg/L	M-78B M-128B H-38B M-125B

Sample MC-3B-FILT was identified as a filter blank. No contaminant concentrations were found in this blank.

Sample concentrations were compared to concentrations detected in the field blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
M-78B	Total phosphorus	0.032 mg/L	0.050U mg/L
M-128B	Ammonia as N	0.047 mg/L	0.050U mg/L
H-38B	Ammonia as N	0.090 mg/L	0.090J+ mg/L
M-125B	Ammonia as N Total organic carbon Total phosphorus	0.008 mg/L 0.8 mg/L 0.032 mg/L	0.050U mg/L 1.0U mg/L 0.050U mg/L

## IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
M-125BMS (M-78B M-128B H-38B M-125B)	Total organic carbon	69 (75-125)	J- (all detects) UJ (all non-detects)	А
M-125BMS (M-78B M-128B H-38B M-125B)	Cyanide	0 (75-125)	J- (all detects) R (all non-detects)	А

## V. Duplicates/Triplicates

Duplicate (DUP) and triplicate (TRP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

## VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

## VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

## VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903404	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

## IX. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Sample	Compound	Flag	A or P
M-19BRE M-34BRE	Nitrate as N	х	А

Data flags are summarized at the end of this report if data has been qualified.

## X. Field Duplicates

No field duplicates were identified in this SDG.

### Introduction

This data review covers 20 soil samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

## The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
6/10/09	ccv	Total organic carbon	89.1 (90-110)	SA127-0.5B RSAJ6-0.5B RSAK6-0.5B RSAK8-0.5B RSAL7-0.5B RSAL8-0.5B SA127-0.5BMS SA127-0.5BDUP	J- (all detects) UJ (all non-detects)	Р

	Surfactants	0.25 mg/Kg	0.25J+ mg/Kg

## IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
SA127-0.5BMS (All samples in SDG R0903184)	Surfactants	48 (75-125)	-	-	J- (all detects) UJ (all non-detects)	А

## V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

## VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
LCS	Bromide	111 (90-110)	RSAK6-0.5B RSAK8-0.5B RSAL7-0.5B RSAL8-0.5B	J+ (all detects)	Р

## VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

## VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903184	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

## IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

## X. Field Duplicates

Samples RSAK4-0.5B and RSAK4009-0.5B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Conce	ntration				
Analyte	RSAK4-0.5B	RSAK4009-0.5B	RPD (Limits)	Difference (Limits)	Flag	A or P
Alkalinity, total	714 mg/Kg	725 mg/Kg	2 (≤50)	-	-	-
Alkalinity, bicarbonate	669 mg/Kg	690 mg/Kg	3 (≤50)	-	-	-
Alkalinity, carbonate	44 mg/Kg	35 mg/Kg	-	9 (≤21)	-	-
Chloride	15.1 mg/Kg	14.0 mg/Kg	8 (≤50)	-	-	-
Nitrate as N	2.38 mg/Kg	2.24 mg/Kg	-	0.14 (≤0.51)	-	-
pН	10.00 units	9.85 units	2 (≤50)	-	-	-
Sulfate	37.5 mg/Kg	36.9 mg/Kg	2 (≤50)	-	-	-
Total organic carbon	1660 mg/Kg	960 mg/Kg	•	700 (≤300)	J (all detects)	Α
Total phosphorus	910 mg/Kg	981 mg/Kg	8 (≤50)	-	-	-
Chlorate	270 ug/Kg	291 ug/Kg	-	21 (≤210)	-	•
Perchlorate	649 ug/Kg	663 ug/Kg	2 (≤50)	-	-	•

#### Introduction

This data review covers 24 soil samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

#### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
6/30/09	ccv	Total organic carbon	89.3 (90-110)	SA201-10B SA201-28B SA201009-28B SA40-0.5B SA200-0.5B RSAO6-0.5B SA51-0.5B SA43-0.5B	J- (all detects) UJ (all non-detects)	Р

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples

	Chloride	123 mg/Kg	123J+ mg/Kg
	Sulfate	483 mg/Kg	483J+ mg/Kg

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Sample	Surrogate	%R (Limits)	Analyte	Flag	A or P
SA70-0.5B	Dichloroacetate	76 (90-115)	Chlorate	J- (all detects) UJ (all non-detects)	А

#### VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903443	All analytes reported below the PQL.	J (all detects)	А

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

Samples SA201-28B and SA201009-28B and samples SA43009-0.5B and SA43-0.5B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Concentration

#### Introduction

This data review covers 21 soil samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

# I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
7/9/09	ccv	Total organic carbon	85.6 (90-110)	SA152-34B SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA109-0.5B SA106-0.5BMS SA106-0.5BDUP	J- (all detects) UJ (all non-detects)	Р
7/7/09	ccv	Surfactants	114 (90-110)	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSAO5-0.5B SA152-10B SA152-20B SA152-34B	J+ (all detects)	Р
7/7/09	CCV	Surfactants	112 (90-110)	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSA05-0.5B SA152-10B SA152-20B SA152-34B	J+ (all detects)	Р

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Alkalinity, total Alkalinity, bicarbonate Chloride	12 mg/Kg 12 mg/Kg 0.9 mg/Kg	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSA05-0.5B SA152-10B SA152-20B SA152-34B
ICB/CCB	Alkalinity, total	1.0 mg/L	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSA05-0.5B SA152-10B SA152-20B SA152-34B SA50-0.5B SA54-0.5B
МВ	Total phosphorus	1.3 mg/Kg	SA45-0.5B SA452009-0.5B
MB	Total phosphorus	1.6 mg/Kg	SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSA05-0.5B SA152-10B SA152-20B SA152-34B SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA102-0.5B
МВ	Total organic carbon	120 mg/Kg	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSAO5-0.5B SA152-10B SA152-20B
МВ	Total organic carbon	130 mg/Kg	SA152-34B SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA109-0.5B

Method Blank ID	Analyte	Concentration	Associated Samples
ІСВ/ССВ	Total organic carbon	76.3 mg/Kg	SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSAO5-0.5B SA152-10B SA152-20B
ICB/CCB	Total organic carbon	143 mg/Kg	SA152-34B SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA109-0.5B
МВ	Alkalinity, total Alkalinity, bicarbonate Chloride Nitrate as N	15 mg/Kg 15 mg/Kg 1.1 mg/Kg 0.45 mg/Kg	SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA109-0.5B
ICB/CCB	Alkalinity, total	0.9 mg/L	SA106-0.5B SA102-0.5B SA109-0.5B
ICB/CCB	Chloride	0.098 mg/L	SA185-0.5B
ICB/CCB	Chloride	0.106 mg/L	SA54-0.5B SA109-0.5B
ICB/CCB	Chloride	0.130 mg/L	SA45-0.5B SA452009-0.5B SA187-0.5B SA186-0.5B
ICB/CCB	Chloride	0.137 mg/L	RSAO5-0.5B SA152-10B SA152-34B SA50-0.5B SA106-0.5B
ICB/CCB	Chloride	0.131 mg/L	SA153-0.5B SA152-20B
ICB/CCB	Chloride	0.139 mg/L	SA102-0.5B

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified.

Sample FB072109-SO (from SDG R0904016) was identified as a field blank. No contaminant concentrations were found in this blank with the following exceptions:

Field Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
FB072109-SO	7/21/09	Ammonia as N Total organic carbon Chloride Nitrate as N pH Total phosphorus Sulfate Surfactants	0.191 mg/L 0.5 mg/L 9.7 mg/L 1.76 mg/L 3.36 mg/L 0.01 mg/L 5.5 mg/L 0.159 mg/L	SA152-10B SA152-20B SA152-34B

Sample concentrations were compared to concentrations detected in the field blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
SA152-10B	Chloride	257 mg/Kg	257J+ mg/Kg
	Nitrate as N	5.13 mg/Kg	5.13J+ mg/Kg
	Sulfate	110 mg/Kg	110J+ mg/Kg
	Surfactants	1.5 mg/Kg	2.2U mg/Kg
SA152-20B	Chloride	395 mg/Kg	395J+ mg/Kg
	Nitrate as N	1.12 mg/Kg	1.12J+ mg/Kg
	Sulfate	121 mg/Kg	121J+ mg/Kg
	Surfactants	1.4 mg/Kg	2.1U mg/Kg
SA152-34B	Nitrate as N	1.47 mg/Kg	1.47J+ mg/Kg
	Surfactants	1.8 mg/Kg	3.0U mg/Kg

# IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
SA106-0.5BMS (SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSA05-0.5B SA50-0.5B SA50-0.5B SA106-0.5B SA106-0.5B SA109-0.5B	Cyanide	0 (75-125)	-	-	J- (all detects) R (all non-detects)	А
SA106-0.5BMS (SA45-0.5B SA452009-0.5B SA187-0.5B SA153-0.5B SA186-0.5B SA185-0.5B RSAO5-0.5B SA50-0.5B SA50-0.5B SA54-0.5B SA106-0.5B SA106-0.5B SA109-0.5B)	Total phosphorus	72 (75-125)	-	-	J- (all detects) UJ (all non-detects)	Α
SA106-0.5BMS (SA106-0.5B)	Hexavalent chromium (7/16/09 12:04) Hexavalent chromium (7/16/09 11:54)	132 (75-125) 136 (75-125)	-	-	J+ (all detects) J+ (all detects)	А

# V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
SA106-0.5BDUP (SA106-0.5B)	Hexavalent chromium (7/16/09 10:10)	33 (≤20)	-	J (all detects) UJ (all non-detects)	А
ŕ	Hexavalent chromium (7/16/09 10:20)	34 (≤20)	•	J (all detects) UJ (all non-detects)	·

# VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
LCS2	Bromide	111 (90-110)	SA50-0.5B SA54-0.5B SA106-0.5B SA102-0.5B SA109-0.5B	J+ (all detects)	Р

### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

# VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903615	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Sample	Compound	Flag	A or P
SA106-0.5B	Hexavalent chromium	х	А

Data flags are summarized at the end of this report if data has been qualified.

# X. Field Duplicates

Samples SA45-0.5B and SA452009-0.5B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Concentration					
Analyte	SA45-0.5B	SA452009-0.5B	RPD (Limits)	Difference (Limits)	Flag	A or P
Ammonia as N	2.53 mg/Kg	2.42 mg/Kg	-	0.11 (≤0.53)	-	-
Alkalinity, total	147 mg/Kg	134 mg/Kg	9 (≤50)	-	-	-
Alkalinity, bicarbonate	147 mg/Kg	134 mg/Kg	9 (≤50)	-	-	-
Chloride	2960 mg/Kg	2860 mg/Kg	3 (≤50)	-	-	-
Hexavalent chromium	0.78 mg/Kg	2.93 mg/Kg	-	2.15 (≤0.42)	J (all detects)	А
Hexavalent chromium	0.82 mg/Kg	3.34 mg/Kg	-	2.52 (≤0.42)	J (all detects)	А
Nitrate as N	40.6 mg/Kg	41.1 mg/Kg	1 (≤50)	-	-	-
Nitrite as N	0.14 mg/Kg	0.15 mg/Kg	-	0.01 (≤0.11)	-	-
рН	8.17 units	8.11 units	1 (≤50)	-	-	-
Sulfate	6190 mg/Kg	6250 mg/Kg	1 (≤50)	-	-	-
Surfactants	8.5 mg/Kg	6.0 mg/Kg	34 (≤50)		-	-
Total cyanide	0.42U mg/Kg	0.7 mg/Kg	-	0.28 (≤1.0)	-	-
Total organic carbon	5400 mg/Kg	4800 mg/Kg	-	600 (≤1700)	-	-
Total phosphorus	856 mg/Kg	956 mg/Kg	11 (≤50)	-	-	-
Chlorate	8720000 ug/Kg	8010000 ug/Kg	8 (≤50)	-	-	-
Perchlorate	481000 ug/Kg	450000 ug/Kg	7 (≤50)	_	-	-

#### Introduction

This data review covers 27 soil samples and one water sample listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Methods 9040B and 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

# The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

# I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
7/9/09	ccv	Total organic carbon	85.6 (90-110)	SA114-0.5B SA114009-0.5B RSAN6-0.5B SA82-0.5B SA82-10B SA82-29B RSAL3-10B RSAL3-10B RSAL3-30B SA134-10B SA134-10B SA134-20B SA134-31B SA82-0.5BMS SA82-0.5BDUP	J- (all detects) UJ (all non-detects)	Р

#### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples

# IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
SA82-0.5BMS/MSD (SA82-0.5B)	Chlorate	-	128 (75-125)	-	J+ (all detects)	А
SA82-0.5BMS (SA82-0.5B)	Surfactants	64 (75-125)	-	-	J- (all detects) UJ (all non-detects)	А

# V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

# VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
LCS	Bromide	111 (90-110)	SA114-0.5B SA114009-0.5B RSAN6-0.5B SA82-10B SA82-29B	J+ (all detects)	P

### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

## VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903678	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

Samples SA114-0.5B and SA114009-0.5B and samples SA134-31B and SA134009-31B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Concentration					
Analyte	SA114-0.5B	SA114009-0.5B	RPD (Limits)	Difference (Limits)	Flag	A or P
Ammonia as N	0.48 mg/Kg	4.64 mg/Kg	_	4.16 (≤0.55)	J (all detects)	А

### Introduction

This data review covers 13 water samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA Method 120.1 for Conductivity, EPA SW 846 Method 9012A for Cyanide, EPA Method 218.6 for Dissolved Hexavalent Chromium, EPA SW 846 Method 9040B for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, Standard Method 2540C for Total Dissolved Solids, Standard Method 2540D for Total Suspended Solids, and EPA SW 846 Method 9060 for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Sample	Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
M-75B	Perchlorate	34	28 days	J- (all detects) UJ (all non-detects)	Р
M-13AB M-13009AB M-64B	Perchlorate	33	28 days	J- (all detects) UJ (all non-detects)	Р
M-111AB M-111ABMS M-111ABMSD M-111ABDUP	Perchlorate	30	28 days	J- (all detects) UJ (all non-detects)	Р
EB062909-GW1 M-25B	Perchlorate	29	28 days	J- (all detects) UJ (all non-detects)	Р

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable.

### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Alkalinity, total Alkalinity, bicarbonate	1.0 mg/L 1.0 mg/L	All samples in SDG R0903561
ICB/CCB	Alkalinity, total	1.0 mg/L	All samples in SDG R0903561
мв	Total organic carbon	0.2 mg/L	M-75B M-13AB M-13009AB M-64B

Method Blank ID	Analyte	Concentration	Associated Samples
МВ	Total phosphorus	0.008 mg/L	M-75B M-13AB M-13009AB M-64B
МВ	Total phosphorus	0.005 mg/L	M-111AB EB062909-GW1 M-25B M-12AB M-110B I-ARB
ICB/CCB	Total phosphorus	0.008 mg/L	M-75B M-13AB M-13009AB M-64B
ICB/CCB	Total phosphorus	0.005 mg/L	M-111AB EB062909-GW1 M-25B M-12AB M-110B I-ARB
МВ	Chloride	0.13 mg/L	EB062909-GW1
ICB/CCB	Chloride	0.13 mg/L	EB062909-GW1
МВ	Chloride	0.13 mg/L	M-25B M-12AB M-110B
ICB/CCB	Chloride	0.14 mg/L	M-25B M-12AB
МВ	Chloride	0.16 mg/L	M-64B M-111AB I-ARB
ICB/CCB	Chloride	0.14 mg/L	M-64B M-111AB I-ARB

Sample concentrations were compared to concentrations detected in the method blanks as required by the QAPP. No sample data was qualified with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
M-75B	Total phosphorus	0.026 mg/L	0.050U mg/L

Sample	Analyte	Reported Concentration	Modified Final Concentration
M-13AB	Total phosphorus	0.021 mg/L	0.050U mg/L
M-13009AB	Total phosphorus	0.019 mg/L	0.050U mg/L
M-64B	Total phosphorus	0.035 mg/L	0.050U mg/L
M-111AB	Total phosphorus	0.029 mg/L	0.050U mg/L
EB062909-GW1	Total phosphorus Chloride	0.015 mg/L 1.9 mg/L	0.050U mg/L 2.0U mg/L
M-25B	Total phosphorus	0.029 mg/L	0.050U mg/L
M-110B	Total phosphorus	0.021 mg/L	0.050U mg/L
I-ARB	Total phosphorus	0.021 mg/L	0.050U mg/L

Sample EB062909-GW1 was identified as an equipment blank. No contaminant concentrations were found in this blank with the following exceptions:

Equipment Blank ID	Sampling Date	Analyte	Concentration	Associated Samples
EB062909-GW1	6/29/09	Ammonia as N Total organic carbon Chloride Conductivity Nitrate as N pH Total phosphorus	0.012 mg/L 0.2 mg/L 1.9 mg/L 3.06 umhos/cm 0.84 mg/L 5.16 units 0.015 mg/L	No associated samples in this SDG

Sample MC-3B-FILT (from SDG R0902886) was identified as a filter blank. No contaminant concentrations were found in this blank.

### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

### VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903561	All analytes reported below the PQL.	J (all detects)	A

Raw data were not reviewed for this SDG.

### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

### X. Field Duplicates

Samples M-13AB and M-13009AB were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Conce	Concentration				
Analyte	M-13AB	M-13009AB	RPD (Limits)	Difference (Limits)	Flag	A or P
Ammonia as N	0.035 mg/L	0.155 mg/L	-	0.12 (≤0.05)	J (all detects)	А
Alkalinity, total	118 mg/L	116 mg/L	2 (≤30)	-	-	-
Alkalinity, bicarbonate	118 mg/L	116 mg/L	2 (≤30)	-	-	-

### Introduction

This data review covers 21 soil samples and one water sample listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9040B for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, Standard Method 2540C for Total Dissolved Solids, Standard Method 2540D for Total suspended Solids, and EPA SW 846 Method 9060 and LLoyd Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

### I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Analyte	Total Time From Sample Collection Until Analysis	Required Holding Time From Sample Collection Until Analysis	Flag	A or P
Perchlorate	33 days	28 days	J- (all detects)	Р
Hexavalent chromium	27 hours	24 hours	J- (all detects) UJ (all non-detects)	
	Perchlorate	Analyte Sample Collection Until Analysis  Perchlorate 33 days	Analyte Sample Collection Until Analysis From Sample Collection Until Analysis  Perchlorate 33 days 28 days	Analyte Sample Collection Until Analysis From Sample Collection Until Analysis Flag  Perchlorate 33 days 28 days J- (all detects) Hexavalent chromium 27 hours 24 hours J- (all detects)

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
7/2/09	CCV (22:09)	Bromide	174 (90-110)	EB062609-SO	R (all detects)	Р

### III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Concentration	Associated Samples

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
SA202-10BDUP (SA202-10B SA202-28B RSAI3-10B RSAI3-20B RSAI3-32B RSAI2-10B RSAI2-09-10B RSAI2-20B RSAI2-31B RSAJ2-10B RSAJ2-10B RSAJ2-33B RSAJ2-33B RSAJ2-33B	Perchiorate	21 (≤20)	-	J (all detects) UJ (all non-detects)	A

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
LCS	Hexavalent chromium	91 (92-110)	All water samples in SDG R0903584	J- (all detects) UJ (all non-detects)	Р

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

#### VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903584	All analytes reported below the PQL.	J (all detects)	Α

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

Samples RSAI2-10B and RSAI2009-10B and samples RSAJ2-33B and RSAJ2009-33B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Conce	ntration

#### Introduction

This data review covers 19 soil samples listed on the cover sheet. The analyses were per Standard Method 2320B for Alkalinity, EPA Method 350.1 for Ammonia as Nitrogen, EPA SW 846 Method 9056 for Bromide, Chloride, Nitrate as Nitrogen, and Sulfate, EPA Method 353.2 for Nitrite as Nitrogen, EPA 300.1 for Chlorate, EPA SW 846 Method 9012A for Cyanide, EPA SW 846 Method 7199 for Hexavalent Chromium, EPA SW 846 Method 9045D for pH, Standard Method 5540C for Surfactants, EPA Method 314.0 for Perchlorate, EPA Method 365.1 for Total Phosphorus, and Lloyd/Kahn Method for Total Organic Carbon.

This review follows the Standard Operating Procedures (SOP) 40, Data Review/Validation (BRC 2009), the Quality Assurance Project Plan Tronox LLC Facility, Henderson, Nevada (June 2009), NDEP guidance (May 2006), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the method stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section III.

Field duplicates are summarized in Section X.

Raw data were not reviewed for this SDG. The review was based on QC data.

#### The following are definitions of the data qualifiers:

- J+ Data are qualified as estimated, with a high bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J- Data are qualified as estimated, with a low bias likely to occur. False positives or false negatives are unlikely to have been reported.
- J Data are qualified as estimated; it is not possible to assess the direction of the potential bias. False positives or false negatives are unlikely to have been reported.
- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- R Data are qualified as rejected. There is a significant potential for the reporting of false negatives or false positives.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- B The analytical result may be a false positive totally attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JB The analytical result may be biased high and partially attributable to blank contamination. This qualifier is applicable to radiochemistry analysis only.
- JK The analytical result is an estimated maximum possible concentration (EMPC).
- X The analytical result is not used for reporting because a more accurate and precise result is reported in its place.
- J-TDS The analytical result is estimated based on failure of the Total Dissolved Solids (TDS) correctness check performed in accordance with the Standard Method 1030E.
- J-CAB The analytical result is estimated based on failure of the cation-anion balance correctness check performed in accordance with Standard Method 1030E.
- J-TDS & CAB The analytical result is unreliable based on the failure of the cation-anion balance and TDS correctness check performed in accordance with standard Method 1030E.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

#### I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

#### II. Calibration

Calibration verification frequency and analysis criteria were met for each method when applicable.

#### \*III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

#### IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
SA206-30BMS (All samples in SDG R0903729)	Surfactants	63 (75-125)	-	-	J- (all detects) UJ (all non-detects)	A

#### V. Duplicates

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

#### VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

#### VII. Surrogates

Surrogates were added to all samples and blanks as required by method 300.1. All surrogate recoveries (%R) were within QC limits.

#### VIII. Sample Result Verification and Project Quantitation Limit

All analytes reported below the PQL were qualified as follows:

Sample	Finding	Flag	A or P
All samples in SDG R0903729	All analytes reported below the PQL.	J (all detects)	А

Raw data were not reviewed for this SDG.

#### IX. Overall Assessment

Data flags are summarized at the end of this report if data has been qualified.

#### X. Field Duplicates

Samples RSAL4-0.5B and RSAL4009-0.5B were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

	Conce	ntration				
Analyte	RSAL4-0.5B	RSAL4009-0.5B	RPD (Limits)	Difference (Limits)	Flag	A or P
