| Subject: | NERT – GWETS Operation Monthly Report – September 2022                             |

At the request of the Nevada Environmental Response Trust (Trust), Envirogen Technologies, Inc. (ETI) is providing this summary of the groundwater extraction and treatment system (GWETS) operation and performance during September 2022.

## Summary of GWETS Operation

Envirogen Technologies, Inc. (ETI) mechanically operated the GWETS and ion exchange (IX) system normally in September 2022. Flow from PC-118, PC-119, PC-120, PC-121, and PC-133 were routed to the IX system, bypassing all flow meters associated with the FBR plant for the month of September. The flow rate to the IX system averaged approximately 268 gallons per minute (gpm). The flow rate to the FBR plant averaged approximately 850 gpm during September. At the end of the month, the filled GW-11 Pond volume was at 39.3 million gallons (MG), which would allow 16.1 days of available additional storage in the event of an emergency FBR plant shutdown with continued well field pumping. The water volume stored in the GW-11 Pond increased since the end of August 2022; Figure 1 in this report depicts the actual GW-11 pond volumes and additional storage available.

The influent perchlorate concentration to the IX system averaged 1.9 mg/L for the month. The influent perchlorate concentration to the FBR plant averaged 54 mg/L for the month, with a maximum concentration of 56 mg/L. In comparison, the influent perchlorate concentration to the FBRs for the month of August 2022 averaged 50 mg/L, with a maximum concentration of 58 mg/L.

### **Enhanced Operational Metrics**

Tables 1 and 2 provide a summary of the current GWETS operational metrics data for flow rates, perchlorate and chromium concentrations, and mass removal. Figure 2 graphically presents historical perchlorate and chromium mass flux information. Attachment A provides a summary of the NPDES permit analytes with numerical discharge limits.

## **Operational Issues**

All routine plant repairs conducted by ETI were performed in accordance with the NERT Perchlorate Treatment System Operations Manual. The following is a list of operational issues and major repairs and/or equipment replaced during this reporting period.

#### 1. GW-11

There were no operational issues with GW-11 in the month of August.

#### 2. Biological Plant

There were influent / effluent diversions during the reporting period generally associated with maintenance activities as well as extraction well short-term shutdown events. Below is a description of the events that occurred:

#### **Diversion Events / Well Shutdowns**

- Influent diversion occurred on September 4, 2022 from 6:00am to 8:00am due to a malfunctioning level control valve at Separator 2. Maintenance was conducted on the valve and the plant was brought back online. Approximately 120,000 gallons of water were added to GW-11.
- Extraction well field shutdown of the Interceptor Well Field (IWF) on September 4, 2022 from 2:00pm to 3:23pm and again from 6:45pm to 7:04pm due to a malfunctioning VFD on the Influent pump. Maintenance was conducted and the well field was brought back online.
- Influent diversion occurred on September 6, 2022 from 8:37am to September 8, 2022 at 12:23pm due to electrical damage in the MCC as a result of a contractor error. The damage was identified and repaired and the plant was brought back online. Approximately 3,100,000 gallons of water were added to GW-11.
- Effluent diversion occurred on September 9, 2022 from 4:49pm to 7:04pm as a precautionary measure due to perchlorate results in the lab. Adjustments were made to the process, the effluent was tested in the lab, and the flow was returned to the outfall. Approximately 130,000 gallons of water were added to GW-11.
- Influent diversion occurred on September 19, 2022 from 6:06am to 8:39am due to a loss of power as a result of capital upgrades to the MCC power panel. Upgrades were completed, power was restored, and the plant was brought back online. Approximately 150,000 gallons of water were added to GW-11.
- Influent diversion occurred on September 28, 2022 from 7:25am to 12:03pm due to damaged electrical components as a result of a direct lightning strike at the EQ Area. Fuses were replaced and the plant was brought back online. Approximately 272,000 gallons of water were added to GW-11.
- Influent diversion occurred on September 29, 2022 from 8:26am to 9:28am due to maintenance efforts at the EQ Area. An electrical breaker that was damaged by the lightning was replaced. Maintenance was conducted and the plant was brought back online. Approximately 60,000 gallons of water were added to GW-11.

#### 3. IX Treatment Plant

During the month of February 2022, flooding conditions were observed adjacent to the SWF as a result of the City of Henderson's (CoH's) use of inactive Birding Ponds 10 through 13. The discharge to these ponds resulted in an increase in groundwater elevation adjacent to the SWF by approximately 5 feet. This increase in groundwater elevation caused flooding adjacent to the SWF extraction wells and within four extraction well vaults. ETI temporarily increased the pumping rate of extraction wells PC-120 and PC-121 to reduce flooding with the well vaults. Additionally, the concentration of perchlorate in shallow groundwater increased resulting in increased loading to the IX treatment plant. The CoH ceased discharging water to Birding Ponds 10 through 13 in February 2022. The groundwater elevation adjacent to the SWF is no longer elevated but perchlorate concentrations are still elevated, although decreasing, in shallow groundwater adjacent to wells PC-118, PC-119, PC-120, and PC-121.

#### 4. Spills

There were no reportable spills in the Month of September.

#### 5. Maintenance

- Major maintenance performed by ETI in the reporting month included:
  - I. Replaced numerous fuses after the lightning strike and replaced the breaker on P-102A.
  - II. Installed covers on the I-well flow meters.
  - III. Installed a new positioner on the level control valve for separator 2.
  - IV. Installed new belts on the South DAF sludge pump.
  - V. Loaded sand into FBR 1.
- Preventative maintenance performed by ETI in the reporting month included:
  - I. Inspected the electrical cabinets at the lift stations.
  - II. Flushed pH and ORP probes.
  - III. Graded the road near the railhead just North of the FBR pad.
  - IV. Greased the aeration blower.
  - V. Flushed the sand filter and cleaned out the weir boxes.

Attachment B contains a summary of all maintenance activities completed during the reporting period.

### **Facility Projects**

- Chromium Treatment Subsystem Envirogen received a Work Authorization for this scope in February 2022. The 100 percent design for the Chromium Treatment Subsystem was submitted and approved by NDEP on May 26,2022. With a number of supply chain delays, Envirogen is currently targeting late October 2022 to complete the modifications required to treat groundwater extracted as part of the Unit 4 Source Area In-Situ Bioremediation Treatability Study as well as the flow currently routed to the existing Chromium Treatment Plant (i.e. GWTP) from the IWF and AP Area wells.
- Treatment System Extension (TSE) Envirogen has delivered all of the contracted equipment for the GWETS extension. TSE construction and system start-up is being facilitated by Arcadis through terms with the Trust and began in December 2021. ETI will incorporate a summary of the treatment operations once the system becomes operational (anticipated to occur in 1Q 2023).
- Facility Repair/Replacement Items Envirogen and the Trust have finalized a list of facility items to be addressed in connection with Amendment 8 to the O&M Agreement. Attachment C contains a status summary prepared by the Trust of all agreed upon items. Specific details on inprogress items are provided below:
  - I. (WA 21-02) East Air Compressor Complete
  - II. (WA 21-03) Wiring at Lift Station 3
    - 1. The A/C units were installed and project is complete.
  - III. (WA 21-04) Motor Control Center at Lift Station 1
    - 1. Work started but delayed due to flooding at the SWF, also impacting Lift Station 1. MCC & major equipment has been delivered. Work to resume in November 2022.
  - IV. (WA 21-05) Replacement of Safety Shower System
    - 1. Installation is complete.
  - V. (WA 21-06) Influent Pipeline Combination Valves
    - Work started but delayed due to flooding at the SWF (couldn't turn off well field with the elevated groundwater levels). Work to resume in November 2022.
  - VI. (WA 21-07) Replacement of all pH and ORP probes.
    - 1. Authorization received from the Trust. Delayed due to supply chain issues. Estimated completion by December 2022.
  - VII. (WA 21-08) Wiring IWF wells
    - New wire has been installed at the wells, awaiting new starters to be delivered. Due to supply chain issues, some of the required electrical items are delayed. Expected delivery in September. Getting ready to run the new power line from the D-1 Building but this will need to be coordinated with system shutdown.

- VIII. (WA 21-09) Siemens controls upgrade
  - Spare parts still being received. Due to supply chain delays the HMI for the on-pad system is delayed. Estimated completion by the end of October.
- IX. (WA 22-01) DAF Pilot
  - 1. Pilot is complete and the report is under Trust review.
- X. (WA 22-02) Sludge Pump and Bins
  - 1. Bins have arrived and the work is completed.
- XI. (WA 22-03) Influent and Effluent Pump Motors
  - 1. Equipment is on order. Deliveries have begun.
- XII. (WA 22-04) FBR Skid Upgrades
  - 1. Equipment is on order. Deliveries have begun.
- XIII. (WA 22-05) Large Valve Upgrades
  - 1. Equipment is on order. Deliveries have begun.
- XIV. (WA 22-07) LS2 Pump Replacement
  - 1. Equipment is on order. Awaiting delivery.
- 4. Improved Biological Treatment Plant Efficiency Consistent with Attachment D to the December 2021 GWETS Operation Monthly Report, Envirogen plans to take five FBRs out of service and maintain them in working condition should they be needed in the future. This action will reduce the use of electricity and water and still maintain sufficient treatment capacity to address current groundwater extracted from the IWF, AWF, and the SWF as well as groundwater to be extracted as part of the Unit 4 Source Area In-Situ Bioremediation Treatability Study. FBR A was placed into Offline mode on April 13, 2022. The electrical and mechanical components of the pump skid were inspected and removed when applicable. The removal of the sand media is complete. Final inspection of all internal components is also complete. The remaining FBRs scheduled to be taken out of service will be addressed flowing startup of the CTS.
- GWETS Effluent Reuse Pilot A work authorization was finalized in April to procure and evaluate the performance of a membrane filtration system to produce GWETS utility water directly from plant effluent. The pilot study has now been completed and a report is under preparation.

Notes:

TR = Total Recoverable.

1: Perchlorate and chromium TR sampled monthly, values reported from Eurofins TestAmerica.

2: Perchlorate, chromium TR, and chromium (VI) sampled weekly, values reported from Eurofins TestAmerica.

3: Sum of daily average flow for individual wells.

4: All concentrations reported are monthly flow weighted averages.

Note: All analytical responsibilities are performed by TestAmerica Laboratories, Inc. (TestAmerica) in Irvine, California, unless otherwise indicated.

<sup>+</sup> Additional samples were collected this week.

NA = Not Available To Date

ND = Not Detected above laboratory reporting limit; concentration in adjacent cell to right is one-half the reporting limit (per Permit condition)

NS = Not Sampled or Not Analyzed

-- = Analyte detected; see column adjacent to right

\* Total phosphorus discharge limitation of 10 lbs/day applies between March 1 and October 31; Ammonia discharge limitation of 20 lbs/day applies between April 1 and September 30; no limits apply the rest of the year. \*\* Samples collected on September 9, 2022 occurred when only the IX was discharging.

Last Updated: October 7, 2022

#### WORKING TRACKING SPREADSHEET DRAFT - NOT TO BE SUBMITTED TO AGENCY

Running - Unit is in operation

Standby - Spare or duplicate, not currently in operation

Off - Not currently needed for use, but can be placed in service

Maintenance - Out of service for maintenance

Criticality Codes

1= Critical - Cannot continue with operation until repairs made

2 = Important - Can still operate safely and in compliance with permits, but risks are increased

3 = Moderate - Work needs to be performed, but plant can still operate with redundancy that is in place

Running - Unit is in operation

Standby - Spare or duplicate, not currently in operation

Criticality Codes

1= Critical - Cannot continue with operation until repairs made

2 = Important - Can still operate safely and in compliance with permits, but risks are increased

Maintenance - Out of service for maintenance 3 = Moderate - Work needs to be performed, but plant can still operate with redundancy that is in place Off - Not currently needed for use, but can be placed in service

Running - Unit is in operation

Standby - Spare or duplicate, not currently in operation

Criticality Codes

1= Critical - Cannot continue with operation until repairs made

2 = Important - Can still operate safely and in compliance with permits, but risks are increased

 Maintenance - Out of service for maintenance
 3 = Moderate - Work nee

 Off - Not currently needed for use, but can be placed in service
 4 = Low - Minor repairs t

3 = Moderate - Work needs to be performed, but plant can still operate with redundancy that is in place

| Sub-<br>System | P&ID | Description   | Status <sup>1</sup> | Checked | Criticality <sup>2</sup> | Notes |
|----------------|------|---|---------------------|---------|--------------------------|-------|

Facility Repair/Replacement Project Status

## **GWETS AMENDMENT 8 REPAIR/REPLACEMENT STATUS** PREPARED BY NEVADA ENVIRONMENTAL RESPONSE TRUST

|    | ITEM  | RESOLUTION  | WORK<br>AUTHORIZATION                        | STATUS<br>AS OF 9/30/22  |
|----|---|---|--|--|
| 1  | Dissolved Air<br>Floatation (DAF)<br>Vessels              | ETI to pilot an alternate technology<br>(AquaDisk filters) and make a<br>recommendation   | ETI WA 22-01<br>\$58,203<br>Executed 1/13/22 | Pilot is complete and draft final report<br>submitted. Working on proposal for a new<br>DAF, waiting for contractor proposals.   |
| 2  | DAF Pump Skid<br>Rebuild                                  | On-hold pending outcome of DAF pilot<br>and evaluation of plant hydraulics  | N/A  | N/A  |
| 3  | Main Influent<br>Pipeline<br>Air/Vacuum Release<br>Valves | ETI to replace valves and valve boxes<br>as required  | ETI WA 21-06<br>\$40,535<br>Executed 12/21   | Work was started but delayed due to seeping<br>groundwater conditions at the Seep Well Field.<br>Work has begun again and currently<br>anticipating to complete site work by<br>November.                                  |
| 4  | In-kind<br>Replacement of<br>GWTP                         | GWTP replacement not required due<br>to design/build of Chromium<br>Treatment Subsystem   | N/A  | N/A  |
| 5  | Wiring at Lift<br>Station #3 (controls)                   | ETI to replace wiring as required   | ETI WA 21-03<br>\$60,035<br>Executed 11/21   | Project is complete.   |
| 6  | Wiring at Lift<br>Station #1 (wells)                      | Project on hold due to potential<br>modification of the SWF with ROD or<br>due to Cadence Sports Park. NERT will<br>authorize interim repairs if necessary. | N/A  | N/A  |
| 7  | Motor Control<br>Center at Lift<br>Station #1             | ETI to replace as required  | ETI WA 21-04<br>\$186,315<br>Executed 12/21  | Work started but delayed due to City flooding<br>the seep area. Lift Station 1. MCC & major<br>equipment has been delivered. Awaiting<br>contractor scheduling but we anticipate<br>completing the work in early November. |
| 8  | IWF Wiring  | ETI to replace as required  | ETI WA 21-08<br>\$436,481<br>Executed 12/21  | New wire has been installed at the wells.<br>Delivery of the new starters has been delayed<br>and are scheduled to ship in October. Getting<br>ready to run the new power line from the D-1<br>Building.                   |
| 9  | FBR Skid Equipment<br>Replacements                        | ETI to replace what is immediately<br>required in lieu of complete<br>replacements  | ETI WA 22-04<br>\$142,061<br>Executed 2/4/22 | Equipment is onsite, preparing project closeout.   |
| 10 | Influent / Effluent<br>Pump Motors                        | ETI to procure additional motors for more frequent rotation   | ETI WA 22-03<br>\$31,800<br>Executed 2/4/22  | Equipment is onsite, scheduling replacement in November.   |
| 11 | Overhaul Lift<br>Station #2 West<br>Wet Well Turbine      | ETI to overhaul as required   | ETI WA 22-07<br>\$97,304<br>Executed 3/7/22  | Installation delayed due to an issue with the seals. Work has been rescheduled to early November.  |
